CONSTRUCTIVE BANKING

An understanding of how a modern Bank can operate to make itself useful to the individual, to business, and to the public has enabled the CANARA BANK to have thousands of depositors and to build resources of a CRORE.

And this is but the beginning. We are a progressive Bank, with plenty of enthusiasm for our work, plus plenty of solid experience with which to tackle the work successfully.

*Passenger and
Cargo Services*

The steamers of the B. S. N. Co., Ltd., which ply along the West Coast of India offer a very attractive sea holiday to persons who have only a limited time at their disposal.

Between Bombay and Goa on the Konkan Coast there are nearly a dozen places such as Janjira, Harnai, Dabhol, Jaygad, Ratnagiri, Viziadurg, Devgad, Malvan and Vengurla where one can spend a short holiday amidst the scenery not met with elsewhere in India.

Fairly regular cargo services are also maintained between Bombay, Mangalore, Kathiawar Ports and Karachi. A fairly regular passenger service is also being maintained between Bombay, Cutch Mandvie and Karachi.

THE LATE Mr. MANOO DEVKARAN NANJEE

Born : 21st October 1903

Died 5th January 1936

**This Book
is Dedicated
to the Late
Mr. Manoo
Devkaran
Nanjee . .**

The late Mr. Manoo Devkaran Nanjee was born on the 21st October 1903. He was educated at the Esplanade High School and St. Xavier's College, Bombay, and joined his father's firms on the 19th April 1923. Very soon it was noticed that he had extraordinary qualities of head and heart, which he used in very successfully and greatly expanding the business of his firms, Devkaran Nanjee & Sons, Chugondas & Co. and Messrs. Devkaran Nanjee. Next to the late Mr. Devkaran Nanjee who founded these firms, the present position and esteem in which these firms are held is due to him. He was one of the Senior Partners in these firms and was, at the time of his premature death which occurred on the 5th January 1936, the Managing Partner of Chugondas & Co. who have been Dealers in Government Securities since 1879. As a Securities man, Mr. Manoo made his mark everywhere and it was truly said when he died that few men equalled him in that sphere. His intelligence, foresight, unceasing diligence and ever smiling and courteous disposition left an indelible impression on every one that came in contact with him. A leading financier of Bombay remarked on hearing of his death: "My young friend Manooobhai was able, nay brilliant, but I, as one who has come in almost daily contact with him, say that I have seen few men more honourable and noble than he was." This "Year Book" owes its existence to his idea and is therefore dedicated to him with affection and reverence.

Foreword

By PRANLAL DEVKARAN NANJEE, Esq., J.P.

(Chairman, Devkaran Nanjee Printing & Publishing Co., Ltd.)

IT is some years ago now, since my dear brother, the late Mr. Manoo Devkaran Nanjee, conceived the idea of a Bombay Investors' Year Book. He was deeply alive to the necessity of such a publication for the use and benefit of all those who are interested in investment on the Bombay Stock Exchange, but unhappily, his idea could not be put into practical shape owing to his much lamented and sudden death in 1936. His wish that our firm should have the privilege and distinction of publishing such a book, however, always remained prominent in the thoughts of my brother Mr. Choonilal and myself, but it was not possible for us to put these thoughts into practical execution at an earlier date. It is a matter of great satisfaction to us now to see our late brother's desire realised in the publication of this First Edition of the Bombay Investors' Year Book.

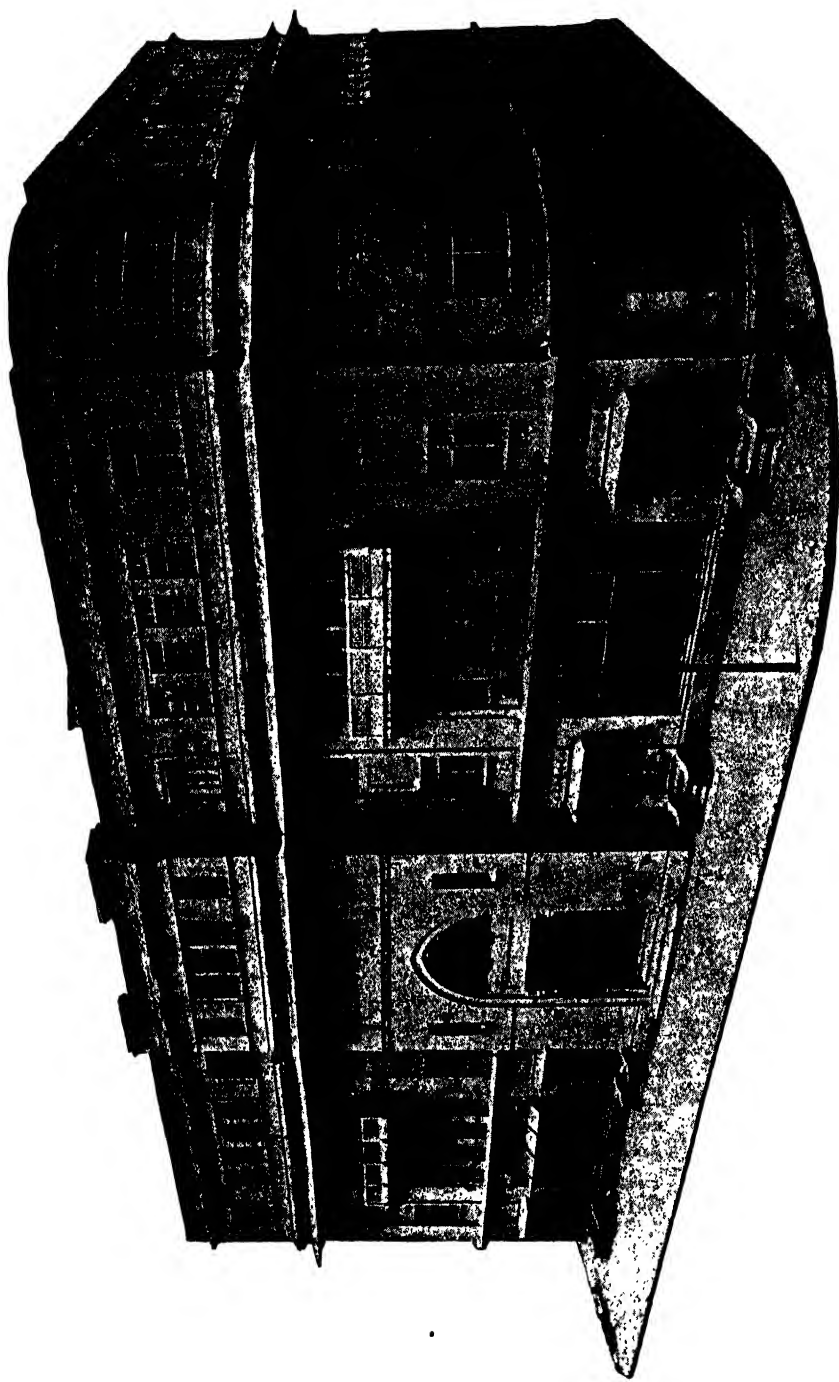

The Devkaran Nanjee Printing and Publishing Co., Ltd., who it will be seen are the publishers of this Year Book, was formed *inter alia* for this purpose. I am indebted to my friend Mr. K. R. P. Shroff, President of the Native Share and Stock Brokers' Association, for his suggestion which enabled us to obtain the co-operation, as compiler, of Mr. Paul Pry whose name is a household word with investors in this country and who for many years was the contributor of 'Investment Gossip' in the "Illustrated Weekly" in India.

The Compiler has endeavoured to give, in as concise and handy a form as possible, all the essential details concerning the various companies in which the Bombay market is interested. In order that investors should have a fuller idea of how the various companies are progressing and in order that a truer comparison can be made, the balance sheets for the last two years have been given, except in a few instances where balance sheets were not obtainable. I have to extend my very best thanks to the various companies for their help in providing us with the Balance Sheets and relevant data.

In addition to the details and statistics regarding companies, we were able to obtain 21 Special Articles from gentlemen eminent in their respective spheres and industries, and we have no doubt that these will add considerably to the usefulness of this publication. I offer my sincere and grateful thanks to these esteemed contributors who are all extremely busy men, and I deeply appreciate their courtesy in responding to my request and sparing their valuable time in penning the articles.

In conclusion, I crave the indulgence of all those who may read this Year Book for the mistakes or errors that may have, despite the great care of the Compiler, inadvertently crept in. In a first essay of this description, it is natural that there may be shortcomings, but it is hoped that succeeding volumes will remedy all these and experience gained will show us what further improvements are necessary in order to make the publication fully worthy of Bombay, the *Urbs Prima in Indis*.

Bombay, 30th August 1940.

The Bombay Stock Exchange Building.

The History of the Bombay Stock Exchange.

By K. R. P. SHROFF, Esq.

(President, The Native Share and Stock Brokers' Association.)

K. R. P. Shroff, Esq.

Mr. K. R. P. Shroff was born on July 28, 1878 and was educated at the Bharda New High School. He was one of the first batch of students in the Byramjee Jeejeebhoy College of Commerce, to pass out with distinction in Commercial Arithmetic, Accountancy and Machinery of Business examinations of the London Chamber of Commerce. He began his career at the age of 22 as a teacher of Mathematics but in 1903 he joined his father in his Stock Exchange business and his assistance was instrumental in making Messrs. R. P. Shroff & Sons one of the most eminent firms in the Bombay Market. He became a Director of the Stock Exchange in 1920 and has been a Trustee since 1924. He was Honorary Secretary and Treasurer in 1921 and 1922 and in 1923 he became President, an office he has filled with distinction ever since. In 1939, in accordance with the recommendations of the Morison Enquiry Committee, he was appointed paid President and resigned from the firm of R. P. Shroff & Sons. He was nominated a Justice of the Peace in 1927 and amongst his other activities must be mentioned the Vice-President of the Bombay Shareholders' Association since 1929, Chairman of the Zoroastrian Co-operative Credit Bank Ltd., Director of the Union Bank of India, the Bombay Central Co-operative Land Mortgage Bank Ltd. and the Indian Mercantile Insurance Company Ltd. He was the recipient of both the Silver Jubilee and Coronation medals.

ALTHOUGH the Share Bazar was founded in 1875, the business of dealing in Securities was well established long before that date. History tells us that as early as 1840, there were about six persons, who called themselves Share Brokers. As such they were fully recognised by the then existing Banks and Mercantile Firms. This number sufficed for the limited business then available at that time, in the shares of Banks and Presses and their meeting place was on the Cotton Green where Elphinstone Circle is now situated.

By the year 1860, their number had swelled to 60, of whom the leader was the late Mr. Premchand Roychand. He was the first broker, who could speak and write English. His education, his courteous and engaging manners, his deep insight and quick mental arithmetic, as well as his advice, brought them into great prominence. Indeed, it is no exaggeration to observe that he led captive the imagination alike of Native and European merchants. As such he was deemed captain of the local Share Bazar though there was no regular organised security market with an elective membership until July 1875. In its early years, there was no restriction placed upon any one, who wished to engage in business of share broking, and each conducted it as he pleased. As a body they were without a name. There was also no Governing or Managing Committee in those days, nor there were any rules.

During the eventful period of the American Civil War (1861-65) there was a colossal influx of wealth in India estimated at about 85 crores, by reason of the unheard of profits of trade in cotton with Lancashire. The supply of cotton to Europe from the United States was totally stopped. Lancashire had almost wholly to depend on India for its full annual supply. "Lancashire absorbed," writes the late Sir Dinshaw Wacha, who was one of our most able and experienced experts in Practical Finance, "Every ounce of the raw staple—good, bad and indifferent,—was exported. There is an amusing tradition, not ill founded, that even old mattresses were put into requisition to get the cotton, new beds being made out of coir fibre. This would show

how deep was the cotton famine in Cottonopolis, and how eager were people of all sorts and conditions in Bombay to turn a penny by pouncing upon any kind of cotton, even rubbish, and realising the shining rupees for it. King Cotton was the great deity at whose shrine between 1862-65, the merchant and the trader, the rich and the poor, high and low, master and servant, all paid pooja."

"Surat cotton, which prior to 1863 was sold in the Liverpool market at 3 to 5 pence per lb. with an exchange of 2 shillings, began to fetch as much as 20 to 24d. Surat or Dhollera descriptions, which were sold on the Green at Rs. 120 to Rs. 180 per candy, rose to Rs. 600 and even Rs. 700. Aye, such were the feverish expectations at the very beginning of 1865, that it was only a question of time that this might mount up to Rs. 1000. The recorded exports of cotton in 1864-65 were 19 lakhs bales valued at Rs. 29 crores against 7 lakhs of bales valued at Rs. 5 crores in 1861."

"Cotton thus brought vast wealth into Bombay. A speculative mania, the first in the history of the city, sprung up among all classes of the community, official and non-official, rich and poor, young and old, male and female."

This huge inflow of capital coupled with the want of legitimate means of investment, came to be invested at this time in an unprecedentedly large number of all sorts of joint stock companies, mostly banks, financial corporations, trading institutions, great land reclamation companies and the like, which led to a feverish and unhealthy speculation known at the time as the "Share Mania," which later on was the ruin of so many families. It was just like the South Sea Bubble and Dutch Mania for Tulips of the eighteenth century in England.

From 1861 to the beginning of 1865, there was nothing, however wild, that was floated but had reached an inflated premium. The Back Bay shares, Rs. 5,000 paid up, were at Rs. 50,000 premium. The Port Canning share, Rs. 1000 paid up, was at Rs. 11,000 premium. The Mazagon Land Reclamation share was at Rs. 9,000 premium. The Elphinstone Land share was more than 500 per cent. premium. Yet, none gave a chance of return within 10 years. Some of the shares of banks and financial institutions had risen from 50 to 100 per cent. premium without rhyme or reason. Colossal speculative business was daily transacted, involving crores of rupees, mostly at a fictitious price.

Thus did the mania gallop wildly along and people indulged into a mad orgie from which they only woke up when the war unexpectedly came to an end and the inevitable panic began to set in. The result was simply terrific and disastrous. Then, everybody who a day before looked upon the bundles of scrip, neatly tied up and lying snugly in a safe or cash box, as representing undoubted wealth, was madly eager to get rid of them and rushed to sell them at any price that was obtainable. But, there were no buyers, and all the immense wealth received during the Civil War was represented only by a huge mass of unsaleable paper. Mr. Premchand and his brother brokers were anathematized. Insolvency and bankruptcy followed on a scale of magnitude unknown, in any other crisis of modern share speculation, and the merciful Act 28 of 1865 passed early by the sagacity of Sir Bartle Frere quickly cleared the Augean Stable. An authentic account of this speculation and its aftermath may be read with interest in the pages of the book styled "A Financial Chapter in the History of Bombay City" by the late Sir Dinshaw Edulji Wacha, to which I have already referred. It was the first financial crisis of great magnitude in this country and the most disastrous that has ever occurred, of which there is any authentic record.

That feverish speculation attracted a large number of persons to become share brokers and increased their number to 250. All of them continually grew in power and under their leader Mr. Premchand acquired great influence and wealth. They were looked upon as sure guides to fortune. Their advice and recommendations were implicitly followed and no wonder. All sorts of reports and rumours were as plentiful then as now. In spite of such a large number of brokers, the share transactions of these feverish days involving crores of rupees were carried out in the open air as they had no premises of their own. Naturally, that large number dwindled down to a

reasonable proportion soon after the crash that overwhelmed Bombay on that Black Friday, *viz.*, the 1st July 1865. The sudden and unforeseen disaster caused an entire stoppage of all speculation. A large number of schemes had to be abandoned.

As soon as normal conditions set in again, brokers increased rapidly in number despite the effects of the Share Mania collapse. Naturally, the leaders recognised the desirability of some organization, accommodation and facilities for carrying on business.

So it was on Wednesday the 9th of June 1875 that a meeting was held, whereat, it was decided to institute a properly regulated Association for protecting the character, status and interest of native share and stock brokers and for providing a suitable Hall or Building for the use of the members of such an association. An elementary association came for the first time into existence from that day and was known as the "Brokers' Association," having on its list about 300 members.

On the 23rd June 1877, it was resolved to take as security 4 per cent. Government Paper for Rs. 500 from a new candidate.

On the 18th January 1878 it was resolved not to admit as a member any person who was a merchant.

The Annual Subscription was fixed at rupee one, which was subsequently increased to Rs. 3 in 1876 and finally in 1877 to Rs. 5.

The entrance fee was Rs. 15 only, which was raised to Rs. 20 in 1877 and Rs. 51 in 1886.

At a meeting held on Saturday the 5th February 1887, the brokers formally established themselves as a society, called the "Native Share and Stock Brokers' Association" and decided to execute a proper deed for the purpose. This brings us to the present constitution of our Association. The Deed and the declaration of Trust were subsequently drawn up by the late Mr. Jamsetjee Cursetjee Cama, Solicitor, and were executed on Saturday the 3rd of December 1887. Thus, the present Share Bazar was formally established and constituted from that date with its own rights and regulations.

The annual subscription and entrance fee were fixed at Rs. 5 and Rs. 51 respectively. The entrance fee has since been raised considerably from time to time. The record price paid for a Card, as the membership is commonly called on the Bombay Market, was Rs. 48,111 in the year 1920.

Prior to the opening, in 1899, of the present Stock Exchange Hall,* the initiation of which is due to the liberal donation of the late Sir Dinshaw Petit, (1st Baronet) as I have already stated, share transactions were carried out in the open air, as the brokers had no fixed business place of their own. Their meeting place between 1840 and 1855 was somewhere on the Cotton Green, where Elphinstone Circle now is. It provided a convenient open space. During the American Civil War they seem to have considered themselves a privileged class, creating as much noise as they pleased and obstructing the particular streets, where they did their business. After 1855 they made their market place under the shade of some wide spreading trees, which stood

* AND WHEREAS the said Native Share and Stock Brokers' Association is possessed of Rupees Thirty-eight thousand deposited with the Manockjee Petit Manufacturing Company Limited, to run at interest at six per cent per annum, being made up of monies realized by sale of Twenty-five shares, in the Victoria Manufacturing Company Limited, given to the Native Share and Stock Brokers' Association by Sir Dinshaw Manockjee Petit for building a Brokers' Exchange Hall in consideration of the members of the said Association having got several shares subscribed to a joint stock company, promoted by the said Dinshaw Manockjee Petit under the name of the Victoria Manufacturing Company Limited, and which with interest amounted to Eighteen thousand eight hundred and eighty Rupees and of Seven thousand Rupees collected by the members of the Native Share and Stock Brokers' Association and a sum of Rupees Twelve thousand one hundred and sixteen, Annas fourteen, given as a donation by Sir Dinshaw Manockjee Petit, on the condition that all the above moneys be vested by the Native Share and Stock Brokers' Association in the names of Trustees for the purpose of being used towards building at Bombay, a suitable Hall, on a suitable site and to be for ever called the Sir Dinshaw Petit Native Brokers' Exchange Hall, which the Native Share and Stock Brokers' Association agreed to do.

near the old "Rampart Row" West, renamed the Esplanade Road, after pulling down the Old Fort walls and giving ample vacant space for new buildings which now stand there, such as the handsome Central Bank of India, the Mercantile Bank and other similar architectural buildings. Brokers were thus forced to seek some other quarters for a meeting place. It was soon realised that they should have their own permanent building to transact, with great convenience and facility, the growing business in buying and selling of securities and shares. Eventually in the year 1874, a suitable place was selected on a monthly rent of Rs. 130 in the very street, where their business was previously carried on in the open. A quarter of a century later, there was acquired a more suitable building where the business is carried on at present. The street is now appropriately named "Dalal Street" after their name.

The admission fee derived from the enrolment of new members and the judicious investment of their funds increased year by year, till 1894, when they amounted to Rs. 71,649. On the 23rd January 1895, it was resolved to buy a building, belonging to Mr. Kawasji Dady Limji, which was in the occupation of Messrs. Framji Sands & Co., for the sum of Rs. 97,000. As the funds were not sufficient to pay the full purchase price of the building it was resolved on the 13th February 1895 to raise a sum of Rs. 21,000 by the issue of 210 debentures of Rs. 100 each bearing interest at $4\frac{1}{2}\%$ repayable at the end of three years. They were all taken up by the brokers and were repaid on the 30th September with interest for six months as per resolution of 23rd September 1895 out of the income derived from the entrance fee of new members.

The building was thereafter renovated at the cost of Rs. 15,000 and still remains on the whole as originally constructed. The Exchange Hall was kept open practically without restriction to the public. Any person could enter the Hall throughout the whole of the day's session.

The chief feature of the building remains as originally constructed. In the large Hall brokers are accommodated, mostly those who are without any office of their own. Each has his own table for settlement of his contracts. There are also a Committee Room, Office of the Association and a Reading Room and Library bearing the name of the first President, the late Mr. Choonilal Motilal. There is also a Clearing House and a Tea Room.

For many years after the Share Bazar was comfortably established, a crowd of dealers in Government Securities remained outside.

On 18th January 1899, the late Mr. Bomanji Dinshaw Petit performed the inaugural ceremony of opening the Hall in the presence of a large gathering of the European and Indian Commercial communities. This ceremony was to have been performed by his esteemed and venerable father Sir Dinshaw, but owing to his sudden illness he could not take part.

The function was marked by enthusiasm and confidence in the future of Bombay which confounded the pessimists, who two years before had predicted general ruin. The late Sir Shapoorji Broacha (then Mr.) the President of the Association, recalled the vicissitudes of business during and after the "Share Mania" when everyone was a millionaire. The great reclamations on which so much of the present City stands, were then rescued from the sea and were handed over to the Government in lieu of vast sums promised as the price of permission to reclaim them, the share capital disappearing for ever. Sir Shapoorji warned the new Improvement Trust not to incur the fate of these ruined shareholders and spoke with scorn of the ignorant scribblers who were said to approve of the doctrine of "rafters not rents" when the value of the houses required by the Trust were in question.

Mr. James M. Maclean, formerly the brilliant Editor and Proprietor of the *Bombay Gazette* and later, M.P. for Cardiff, was specially invited to honour the function. He took part in the proceedings by addressing the assembly with verve and vigour, matured by some years experience in the House of Commons.

This old building was just sufficient for the requirements of those days. During the Post-War boom it became inconveniently crowded ; and the want of a more spacious Exchange Hall was greatly felt.

The business had then increased to such an extent as to render the existing Trading Hall too small for its convenient conduct. It was necessary to enlarge the Hall for the transaction of the increasing volume of business.

Accordingly, the adjacent property, which had been sold in 1913 for Rs. 73,000 was bought in April 1920 at a cost of Rs. 10,30,000. The price paid is an illustration of the great inflation then prevalent in almost every kind of property, especially the value of house property.

Money was obtained for the purchase of the property just mentioned, by the admission of thirty two new members paying an entrance fee of Rs. 40,000 to Rs. 48,000.

It was the intention of the Association to erect forthwith a new building on the sites acquired. Plans were prepared, but before anything practical could be done, the Post-War boom collapsed. A destructive deflation naturally followed. The construction of the new building had to be postponed. Eventually, the building on the sites purchased was demolished, the Association thereby suffered a loss of Rs. 22,000 a year in the rent of offices demolished, and in its place a new commodious market place was erected in 1924, to which the public was and is still refused permission.

In 1928, the Association purchased a vacant plot of land measuring 1,455 square yards belonging to the Municipality adjacent to its present buildings, for the sum of Rs. 5,04,662 on which a new building was erected at the cost of Rs. 4,60,000.

The first foundation stone of this new building was laid on Thursday, the 28th March 1929, the ceremony having been performed by me as the President of the Association. It was also my good fortune to perform on Monday, the 1st day of December 1930 at 7-30 a.m. the auspicious ceremony of opening the building for use.

This handsome building, known as the Stock Exchange Building is most admirably situated in close proximity to the Imperial Bank of India. It stands at the junction of three of the oldest streets, *viz.*, Apollo, Hummam and Dalal. It is a handsome addition to the many stately offices to be seen in the Fort and when connected with the new Hall and market place to be constructed hereafter on demolition of the old building, and on the land west of the old building which was purchased in 1938, for Rs. 1,45,000, it will be more worthy of the Stock Exchange as a public institution and will greatly add to the prestige of the Bombay Share Bazar as the most important in this vast country of ours and which plays such a great part in our economic life.

May 1940

Gilt-Edged Market Review for the Year April 1939-March 1940.

By MERWANJEE BOMANJEE DALAL, Esq.

Merwanjee Bomanjee Dalal, Esq.

Mr. Merwanjee Bomanjee Dalal after being educated at the London School of Economics and Political Science, joined the leading Stock Broking firm of Messrs. Merwanjee & Sons and was one of the two active partners of the firm during a decade of its career. After the dissolution of that firm by mutual consent of the partners, Mr. Merwanjee is running a similar business under his own name.

FOR the purpose of review the twelve months ending 31st March 1940 are best divided into three periods corresponding to the three clear-cut phases through which the market passed.

There was first the period of recurring political crisis, a veritable war of nerves waged by the German Fuhrer with the consummate cunning of a Machiavelli or a Kautilya and utilising every known device of applied psychology. This period ended in the declaration of war on September 3, 1939.

The second period barely covers three weeks and comprises all those movements in the financial markets which were the direct result of the disorganization and the need for adjustment which followed owing to the sudden change to a war economy. But the throes of adjustment did not last long and within a remarkably short period the markets had started off upon a period of recuperation.

This getting back to pre-war levels constitutes the third period from October 1939 to March 1940. This period may be characterised as a stalemate in hostilities wherein there was no resounding clash of steel, no important gains or reverses of the combatant forces, and no interminable lists of casualties. The reports that came in spoke rather of the showering of leaflets by Allied planes over Germany, the affirmation of the Neutrality of Italy and Soviet Russia and of the 'peace plans.' Helped by these factors and under the influence of strong official control the market made an almost complete recovery in six months from October 1939.

I shall now take up in greater detail the history of these three phases,—the first a period of extreme political uncertainty lasting for about six months, the second a short interlude of less than a month and the last a period of almost equal duration to the first. The first period, characterised by fluctuation and uncertainty, was itself the outcome of yet another year of almost endemic political crisis in Europe. Before this period can be satisfactorily reviewed it is necessary to get some idea of the extraordinary political background which directly made it what it was. This background will also serve to obtain a better perspective where events of a whole period are under review.

BACKGROUND OF POLITICAL EVENTS LEADING UP TO THE FIRST PERIOD UNDER REVIEW.

Going back for a space of seven months one comes to those series of efforts made by Mr. Chamberlain to avert war which ended in the momentous Four-Power Conference where Mr. Chamberlain, Signor Mussolini, Monsieur Daladier and the German

Chancellor set their hands to a document which, however, from the very moment of its execution, was powerless to stop the heaping up of events that led to the disastrous climax of 3rd of September 1939. Mr. Chamberlain's policy of appeasement had failed and the war which broke out was a war of ideals. On the one side were ranged all the forces of those Sovereign States who put some value on the liberty of the individual, on the other the marshalled forces of the old Prussianism now revived as a tribalistic politico-religious movement indulging in the deification of the State and of its temporal god, the Führer.

The unbearable tension which existed previous to the four Power Conference had hardly given place to the extreme relief which followed its apparently successful conclusion, when ominous rumblings again put Europe on tenterhooks. The question of the right of self-determination of the Germans in Czecho-Slovakia now began to take a more serious shape. At opportune moments the German Chancellor delivered truculent speeches which were calculated to add fuel to this fire. They were awaited the world over with apprehension and used to such effect that they formed the hub on which events turned as phase after phase of this psychological offensive developed. In the month of November 1938 came the barbaric purge of the Jews in Germany. Passions and fears were further roused and rendered the situation hourly more dangerous. Czecho-Slovakia was annexed by Germany. The Calvary of Munich had been in vain. Hardly had the Czechs been swept off the map of Europe when Germany sent an ultimatum on 20th March 1939 to Lithuania demanding Memel Territory. The demand, backed by the threat of irresistible force, was granted and speaking at Memel three days later Hitler said "I believe that to a great extent we have come to the end of this unique reparation." The declaration, however, deceived no one, and, as later events proved, Germany was just beginning to satisfy her plans for aggrandizement. The British Prime Minister, realising at last that his policy of appeasement had failed, announced that the British Territorial Force would be doubled and conscription was introduced in Britain soon after. It became evident that the basis of international confidence was lost and that force had become the determining element in the policies of the totalitarian States. This diagnosis of the European political situation was confirmed by the Italian invasion of Albania during Easter. It is from this point of time that I have to take up the review of the gilt-edged market in detail.

THE PRE-WAR PERIOD FROM 1st APRIL 1939 TO 3rd SEPTEMBER 1939,

The quotation for 3½% Government Paper stood around Rs. 94 in the beginning of the month of April. The atmosphere was charged with uncertainty. Mr. Chamberlain had given an unequivocal assurance of assistance to Poland in case of aggression. Under different circumstances perhaps such a guarantee would have acted as a stabilising force and, in fact, the first reaction to this news was bullish, 3½% Government Paper touching 94-10. But, it was soon realised that such a firm assurance might just as well serve to precipitate a crisis. Herr Hitler could no longer play at his old game of violating the independence of a nation and explain his action to the world afterwards. It was evident that if Poland was invaded, Great Britain and France would at once take up arms against the aggressor. Germany, it seemed, would at last be forced to choose between peace and war. The gilt-edged market reflected this uncertainty and owing to the pressure of selling by bears, prices began to decline.

Throughout those five months there were sharp fluctuations engendered by recurrent crises, the result of the stage-managed "war of nerves" alternating with strong doses of the "peace-offensive." In the month of April, President Roosevelt made one of his earlier efforts at averting war, but it proved abortive, and so far as its effect on the fluctuations of the market was concerned it caused as much disturbance as any of the well-planned peace campaigns of Herr Hitler. However, by the end

of the month the market showed a definite set-back as a result of the combined effect of the British Budget proposals, which revealed a heavy borrowing programme, and the introduction of conscription in England.

As the zero hour for the Budget proposals approached, the market had been showing increasing apprehension and the fear had been expressed that the year's borrowing programme under the pressure of an ever-increasing burden of armaments, would perhaps force up interest rates and bring about a fall in the gilt-edged market. Finally when the Budget was presented to Parliament it was revealed that there was no increase in the income-tax but the announcement that the Government's borrowing programme would have to be increased from £350 to £380 million depressed the market. The decline, however, was arrested as the Chancellor of the Exchequer affirmed the Government's determination to follow an easy money policy in spite of the difficulties of the position. In the diplomatic sphere the Anglo-Soviet negotiations were of major importance. Signor Mussolini's speech at Turin in the month of May, affirming his conviction that the political tangles of Europe could be solved without the use of the sword, helped recovery. Locally, there was a rush to cover bear positions and the price which had declined at the end of April to Rs. 92-12 rose steadily to Rs. 96-12 by the end of May.

This was the first definite up-swing since the Munich Crisis. From this point onwards, a certain trend put in an appearance which is worth remarking upon. It appeared as if the market was becoming gradually more inured to the violent shocks which had become its daily bread, and it is worth observing that the curve which prices henceforth plotted was, with minor set-backs, an upward one. Political events, however, did not justify this upward trend. War clouds were gathering over Europe and there were ominous signs that the storm would burst in all its fury over the question of Danzig. Herr Hitler had found for the German imagination another word to conjure with. Astute observers of the European political scene noted, however, that Danzig was not the real cause but would be made merely the occasion for a quarrel with Poland. With the Führer's constant exhortations to the German citizens of Danzig to be prepared and Poland's declaration that any attempt to alter the status of the Free City by force would be regarded as an infringement of her territorial rights, all the elements for a first class crisis were discernible. But the gilt-edged market once again failed to grasp the dangerous potentialities of the situation and when, in the second week of July, Mr. Chamberlain reiterated the British guarantee to Poland, 3½% Government Paper curiously enough registered a rise from Rs. 95-7 to Rs. 96-4.

In this disturbed background, just as the vexed question of the Polish Corridor was being raised again in a new form, the Provincial Governments of the Central Provinces and Berar and the Government of Madras offered two new loans of Rs. 75 and Rs. 150 lacs respectively. The loans, issued on 21st June 1939, were both 3% loans, offered at Rs. 98-8 per cent. The C. P. Government Loan was repayable in 1949 and the Madras Loan was repayable 10 years later. The shorter issue, as was to be expected, was an immediate success and the result was an allotment of only 66%. For the Madras Loan, repayable in 1959, the underwriters had to be called upon to take up a portion.

Although the recrudescence of the German-Polish question in an acute form was undoubtedly responsible for the failure of the Madras loan, it is questionable if, under the prevailing circumstances, an altogether best possible moment for the flotation of such loans existed and if it were at all possible to hit upon the exact time for the issue. The loans were floated under the Reserve Bank of India Under-writing Scheme for Provincial Loans and the operations of the scheme in regard to the approaching of underwriters and the fixing of the issue price could not, of course, have taken into account the minute to minute changes in the European political situation.

Soon after the two Provincial Governments had tapped the market, subscriptions were invited by the Central Government on the 5th of July for the second issue of the 3% 1963-65 Loan at Rs. 98 per cent. The Government offered to receive cash or 5 per cent. 1939-44 or 5 per cent. 1940-43 Loans in conversion. The amount in cash or 5% 1939-44 in conversion were to be accepted to the extent of Rs. 15 crores only while no limit was set to the conversion of the 1940-43 bonds. The prices offered in the conversion for the 1939-44 and 1940-43 bonds were Rs. 100-6-0 and Rs. 104 respectively. This issue was received by the market without any particular reaction. The amount of the loan offered being comparatively modest and well adjusted to the needs of the market at that time, when a dearth of long-dated investment standing at a discount was being felt, the issue offered little difficulty in spite of the situation created by the political boil-up in Europe.

The result of this issue was as under :

Cash	-	-	-	-	-	-	-	Rs. 1,34,58,400
5% Loan 1939-44	-	-	-	-	-	-	-	8,23,58,800
5% Loan 1940-43	-	-	-	-	-	-	-	6,13,90,800
								<u>Rs. 15,72,08,000</u>

For six weeks after the flotation of the loan there was gradual improvement encouraged by the absence of any adverse political news. At the time of the flotation of the Central Government loan the quotation for 3½% Government Paper was around Rs. 96; by the middle of August Rs. 97-8 was touched.

At this juncture, on the 16th August, seizing a favourable opportunity, the Government of the Punjab issued a 3% loan at Rs. 98 per cent. repayable in the year 1949. The amount offered was comparatively large—about Rs. 250 lakhs—but the loan was a definite success. There was only a 90% allotment and it was over-subscribed within a couple of hours. This was a most fortunate issue. No sooner had the results been announced than the political situation took on an altogether menacing aspect. However inured their attitude had become to these alarms and excursions operators were hardly able to withstand the unnerving effects of the next fifteen days of tension. The price of Government Paper fell from Rs. 98-1 to Rs. 95-0.

During this fateful second fortnight of August the psychological tension began to rise until it culminated in the declaration of war on 3rd September. Incidents on the Polish-German frontier created a situation of the utmost gravity and Parliament was hastily recalled.

In the City of London the important event was the rise in the Bank of England rate from 2% to 4% on 24th of August. Minimum prices for various British and Indian Stocks were fixed by the London Stock Exchange as a precautionary measure. 3½% Government Paper fell from Rs. 96-5 on 24th August to Rs. 92-14 just before the outbreak of war. Gilt-edged values collapsed completely, the long-dated issues registering a fall proportionate to the decline in Government Paper.

On Thursday the 31st August business on the London Stock Exchange was suspended.

THE DECLARATION OF THE WAR AND THE MARKET DURING MONTH OF SEPTEMBER.

In the early hours of the morning of the 1st of September Germany invaded Poland. Later in the day Mr. Chamberlain addressing Parliament said "We shall stand at the bar of history knowing that the responsibility for this terrible catastrophe lies on the shoulders of one man—the German Chancellor."

On the same morning the British and the French Ambassadors in Berlin handed over a last warning to Germany to withdraw her troops from Poland.

The ultimatums, due to expire on the 3rd of September, were unheeded by Germany who continued with the invasion. Consequently Great Britain and France declared war on Germany,—for the second time in 25 years.

When the market reopened on Monday the 4th September, $3\frac{1}{2}\%$ Government Paper was quoted at Rs. 89-7. The quotation was altogether nominal. The authorities of the Stock Exchange suspended forward trading in Government Paper from 4th to 12th September. In London, also, the same conditions prevailed, quotations were nominal and showed no continuity with pre-war quotations. The prices then fell to the officially fixed minima. It was possible, however, to transact some business from time to time but difficulty increased and soon sellers at minimum levels had literally to 'take their turn.' The difficulties were so great that even minimum prices became altogether unreal. But there was little doubt that the fixing of minimum prices in London had served its purpose in staving off successfully the evil effects of panicky selling and of so letting the market deteriorate that easy recovery would become difficult. With the war situation developing step by step this symptom showed up in an exaggerated form and the market was completely frozen. Marketability was as good as lost for the time being and complete stagnation followed. To such an extent did this characteristic develop that the troubles of the market for industrials in London were blamed to a large extent on to this development in this gilt-edged market.

At the end of the first month of the war, however, conditions began to show a rapid change and liquidity which had been transferred to the industrial market from the gilt-edged, where it primarily belonged, passed once again to Governmentals. The crisis passed in the nick of time, as a matter of fact just as the fixed minima appeared to be getting into insurmountable difficulties.

With this welcome change appearing on the scene the market was inclined to overdo the recovery and prices advanced sharply as soon as the contents of the British Supplementary Budget were known and the Bank of England rate was reduced to 3% on the 28th of September.

In the local gilt-edged market there had been a precipitous fall in $3\frac{1}{2}\%$ Government Paper. On the 2nd day of September the quotation had stood at Rs. 89-8. In the last week of September the quotation steadily declined from Rs. 83-12 to Rs. 81-12. From the quotation of Rs. 94-14, where it stood at the commencement of the session on the 1st day of the month, this was a spectacular decline within so short a period.

Accompanying this collapse in gilt-edged prices, came the usual symptoms of financial malaise—a withdrawal of bank deposits and an advance in money market quotations. Although these tendencies were marked enough, nothing like the upheavals of 1914 were experienced. Control was altogether more complete and timely. The thorough control, admirable in the adequacy of its detail, reduced fluctuations to the very minimum. The Reserve Bank of India rate remained unchanged throughout this period. Fixed deposit rates only showed a slight improvement following discount rates in London. The call rate which advanced to $1\frac{1}{4}\%$ had returned to its pre-war level of $\frac{1}{2}\%$ in three weeks.

In the absence of violent fluctuations recovery followed almost immediately.

THE PERIOD FROM 1st OCTOBER 1939 TO 31st MARCH 1940.

The all-round recovery which started at the end of September continued steadily, interspersed with only minor reactions, till the market had, at the end of this third period of the review, regained the greater part of the losses sustained during September.

This recovery was made possible to a very great extent by the Reserve Bank promptly supplying 60 crores of additional currency by expanding the note-issue against sterling securities and by heavy purchases of Central Government Treasury Bills and short-dated rupee securities. This expansion was spread over the first three months of the war during which the strain on the money market was chiefly in evidence.

One cause for the upward movement early in October was the belief that the fall in the price of Government Paper during the first month of the war had been overdone and as a simple reaction the quotation tended to rise. But, a report from Copenhagen that Hitler would put forward terms for peace lent substantial support to this upward trend. These factors were responsible for the improvement in the quotation of $3\frac{1}{2}\%$ Government Paper from Rs. 82-6 to Rs. 84. With the publication of the peace proposals, however, it was clearly felt that they could not satisfy the Allies and all hopes of an early settlement were shattered. But, for the first few months, the market continued to be under the influence of 'peace offensives' and the sins of German aggression had to mount up considerably before the conviction grew that stage had been reached when Germany, whatever the temptation she held out, could not be forgiven her transgressions. With the laying of this banshee of sudden peace, at least one weapon in the technique of Germany's "Total War" was rendered innocuous.

In the instance of this particular peace move the effect did not evaporate by mere passage of time as on most previous occasions but it was definitely countered by a immediate rebuff dealt by England and France. The result was a drop in the price from Rs. 85-14 to Rs. 83-8.

The market, however, soon took up its trend of gradual improvement and the level of Rs. 85-12 was restored by the end of October. Gilt-edged values in London were also recovering in spectacular style. Greater freedom of trading was continually on the increase. Long-dated loans were again coming into prominence and there was even a definite demand for them. By the end of October prices had moved above the official minima in London and conditions were reminiscent of a boom in gilt-edged with a marked shortage of stock in evidence.

The climax was reached when the Bank of England rate was reduced for the second time since the war on the 26th October. This reduction brought the rate down to the pre-war level, namely 2%.

Improvement in dated stocks pointed to the solid basis of the recovery. And so the month of October completed the thawing of the markets frozen by the impact of the outbreak of war.

At the time of the second reduction in the Bank of England rate the authorities there had also taken supplementary measures such as, for example, allowing Clearing Bank balances to accumulate rapidly and with these measures being enforced gilt-edged prices gathered a momentum which continued to drive up the level.

During November the quotation for $3\frac{1}{2}\%$ Government Paper gained two and a half points. During this month there was a stalemate in war conditions and technical considerations absorbed the interest of the market. The absence of any disturbing war news, the prevailing opinion that a British War Loan was imminent and that energetic measures would be taken to ensure its success were the factors which encouraged a bullish sentiment. But the market completely failed to make a correct guess as to the details of the time of the flotation. The only confirmation available that the bazar had been guessing to some extent correctly the intentions of the authorities was an announcement in Parliament in mid-month that a bill was to be presented to obtain fresh borrowing powers. The market continued to discuss the possibilities of the flotation right up to the end of November. The close of the month saw a beginning made with the borrowing programme. The British Government announced

an issue of New National Saving Certificates and Defence Bonds of small denominations at rates considered favourable for small investors. But as the terms of the issue were considered somewhat generous it produced a measure of dullness.

On 30th November Russia invaded Finland. This invasion, although of considerable political importance as it might have led to grave repercussions and to an extension of the sphere of hostilities, had little or no effect on the gilt-edged market. As it turned out, however, from every point of view this campaign was to a very great extent futile. Although in its design as treacherous as the Soviet's earlier attack on Poland, it was evident on this occasion that the aggressor's gain in territory was too small in comparison to the loss in men and material which he was deemed to have suffered.

During December this trend continued and lethargic dealing was the rule throughout the month. Prices locally would have had a sagging tendency during these weeks had it not been for the firm and unflagging tone of the Indian Sterling Stock market in London. Fluctuations in $3\frac{1}{2}\%$ Government Paper were confined during this month between the high and low of Rs. 88-0 and 87-5.

There was, however, a complete change in the tone of the market during the New Year. During the months of January, February and March, $3\frac{1}{2}\%$ Government Paper advanced by no less than seven points. In strong contrast to conditions in December many remarkable features now put in an appearance.

Throughout this period the London market provided the optimism and the inspiration for local trading. The atmosphere in London was charged with bullish excitement and the watchword in some quarters was "Par for the War Loan before a new issue." On 11th January the War Loan was quoting at £96 $\frac{1}{2}$.

The market was anticipating a large Treasury flotation in the near future and it was felt that it would take the form of a dual issue to meet the investment needs of private individuals, institutions and finance houses.

In the third week of January, the repayment on the 1st July of the $4\frac{1}{2}\%$ British Conversion Loan was announced. Holders were given the option of taking against their holding a new 2% issue. This announcement had a bullish effect on that market. Just around this juncture the terms of the British Excess Profits Tax Bill were made public and this had a quietening effect on gilt-edged sympathetically through the deleterious effect it had on industrial scrip generally. The quietness, however, soon passed away and the market resumed its steady advance.

In the second week of February Sir John Simon announced the result of the $4\frac{1}{2}\%$ Conversion Loan offer. Holders of £236,000,000 accepted the offer. The dissented part of the loan totalled £94,000,000. This result was considered satisfactory.

At the end of February the Reserve Bank of India initiated a scheme "to accelerate the repatriation of India's Sterling Debt."

Rupee Loans as counterparts of six India Sterling Loans of various maturities were floated. The communique said that "with effect from 1st April, 1940, holders of the several Sterling Loans are given the option of transferring their holdings from the books of the Bank of England to the Rupee Registers to be opened and maintained in India by the Public Debt offices of the Reserve Bank of India at Bombay, Calcutta, Delhi and Madras." Investors availing themselves of this facility had to take out a licence from the Reserve Bank paying a negligible fee on the face value of the stock and on presentation of this licence to the Public Debt Office an identical rupee loan converted at 1s. 6d. to the rupee was to be issued as soon as advice of cancellation of its sterling counterpart was received from the Bank of England. This announcement, coupled with the improvement in $3\frac{1}{2}\%$ India Sterling Stock, had a favourable reaction on the gilt-edged market. There was a substantial demand for conversions under the Reserve Bank Scheme.

The Market thus received the scheme favourably. "Capital" in its issue of 29th February 1940, expressed the opinion that the Conversion Scheme marked an important phase in the march to financial Swaraj. Recalling that the decision to eliminate extra-Indian borrowing was taken under the regime of the late Sir Basil Blackett, the paper concluded that from whichever angle the proposals were viewed they will liquidate India's debt to Britain.

During the month of March the market continued to make progress and advanced from strength to strength.

The main impetus during the month was the flotation during the first week, of a New War Loan by the British Government—a 3% Loan at par repayable in 15 to 19 years. The loan was well received by the London market and with the prices of British Reserve Funds bearing out this view the local market moved up in sympathy. Late in the month there was a slight set-back due to the feeling that the visit of Mr. Sumner Welles to Europe might lead to peace negotiations. One other bear factor was the rather sudden decision taken by the authorities of the London Stock Exchange to fix a new level of minimum prices for gilt-edged. As at the time of this fixing no new factor in the war situation was apparent, operators locally took the view that the authorities in London were expecting an intensification of hostilities. One would expect, however, that there was a good technical reason for announcing the new minima at that time.

However, the quietness brought on by both these factors was merely a passing phase and by the end of the month the price had again touched Rs. 95, which was practically the same as the opening quotation on the first of September 1939.

FUTURE PROSPECTS

The sponsors of this volume have asked me to write about the future prospects of the gilt-edged market. This section of the review if it had been written at the end of March 1940, and if it had been written even with the greatest amount of perspicacity, could hardly have anticipated present conditions,—*blitzkrieg* in all its war horror would have intervened.

Those who claim under prevailing conditions to forecast the future of the gilt-edged market could not be seriously included in the category of men of business. They would necessarily have to invoke to their aid the obscure sciences of the Dark Ages. The calculations of modern Economic Science no longer hold good when, as now, the whole fabric of civilization appears to be profoundly endangered. To talk of the future prospects of gilt-edged securities can only be persiflage. Conclusions if they could be drawn at all would be of so broad a nature that they could provide little guidance to the investor.

One does not have to doubt in any way the ultimate victory of the Allies, to say that the future of gilt-edged must for some time to come sail dangerously close to the wind. It appears to be inextricably bound up with the manner in which the war will be paid for. It is certain that the cost of the war will be unprecedented. Financial panaceas furthermore are notoriously dangerous and the pharmacopœia extensive. With the best of intentions the result of the cure will rest in the laps of the Gods.

No situation is all gloom, however, and investors might justifiably draw cheer from the behaviour of the gilt-edged market since the outbreak of war. That the market can be controlled to the extent of producing movements which the 'laissez, faire' economists and the backers of 'the Economic Man' would have considered paradoxical, can be but an augury of good for the time when we shall be confronted with the problem of handling a difficult post-war situation. Meanwhile let us content ourselves in patience, so as not to embarrass a situation unparalleled in its gravity, and wish for a complete and speedy victory of the British Commonwealth upon which single fact depends the whole structure of our gilt-edged markets.

Money, Exchange and Bullion in 1939.

By CHUNILAL B. MEHTA, Esq., J.P.

(President, Indian Merchants' Chamber, Bombay.)

Chunilal B. Mehta, Esq.

Mr. Chunilal B. Mehta is an ex-Sheriff of Bombay and is also a Justice of the Peace. He is the President of the Indian Merchants' Chamber, Bombay, Indian Stock Exchange Ltd., Bombay and Bombay Shroffs (Indigenous Bankers) Association, Bombay. He is the Vice-President of the Federation of Indian Chambers of Commerce & Industry, New Delhi.

He is a Director of the Bombay Bullion Exchange Ltd., and a Member of the Indian Central Cotton Committee. He is also Director in many commercial concerns in Bombay and outside.

He travelled round the world in 1927 and again to America in 1930.

He was a Director of the East India Cotton Association for a number of years but recently owing to his varied activities, did not offer himself for re-election. He was also a Member of the Imperial Council of Agricultural Research (1935-38).

THE year 1939 should pass down into history as one which blended peace-time finance into war-finance without any mishap, causing little, if any disturbance to the financial structure of the country.

Unlike the 1914 war when money rates soared sky-high for want of economic preparedness, and investment and commodity markets suffered severe shake-downs, the 1939 war opened with the least disturbance to the financial markets of U.K. and India. The whole financial machine was so well-nursed, oiled and kept so well-trimmed that the actual declaration of hostilities turned it into a first-class shock absorbant which could cause no perceptible dislocation of economic conditions.

During the first eight months of the year, the financial markets were overshadowed by the political situation and gilt-edged securities, in particular, were subjected to sharp fluctuations with a softening tendency. Early in 1939 the resources of the British Exchange Equalisation Fund were strengthened by the transfer of £ 200 million worth of gold from the Bank of England. Then, the Bank's gold stocks were revalued under the Currency and Bank Notes Act of February, 1939. Record defence expenditure was provided for in the U.K. budget. Thus, British economy was gradually transforming itself from a peace to a war-time footing months before hostilities actually commenced. With the declaration of war against Germany, sterling was devalued and officially pegged to the U.S. dollar at 4'02 to 4'06 and subsequently at 4'02½ to 4'03½. Unlike 1914, war-controls on exchange and other markets were imposed with the least delay and the bank rate which was raised from 2 to 4 per cent., immediately after the commencement of hostilities was reduced to 3 per cent. towards the close of September and then to the pre-war level of 2 per cent. towards the end of October. At the end of the year the whole monetary machine looked so efficient that there was a tendency to style the present war as a genuine three per cent. war.

In the Indian financial markets, the declaration of war led to a sharp break in gilt-edged prices, a certain amount of withdrawals of deposits from banks and a slight hardening of money rates in the first few days. But, later, markets adjusted themselves to the requirements of the new situation, gilt-edged prices and bank deposits showed improvement and money rates tended to attain peace-time equilibrium.

Compared with the corresponding period of the previous year, monetary conditions during the first four months of 1939 were generally firmer and call money went as high as $2\frac{1}{4}$ per cent. Conditions were slack in May and June and later on night as well as time money rates tended to ease, which tendency was accentuated by the repayment of the Government of India 1939-44 bonds on 15th July. Call rate dropped to $\frac{1}{4}$ per cent. in August 1939. Consequent on the declaration of hostilities in September, however, money was again in increased demand obviously for financing the public purchases of silver, industrial shares and commodities. Although the supply of money was plentiful, bankers generally appeared hesitant to lock up their funds far ahead. The tendency to maintain balances in a liquid form found natural reflection in the increased but temporary withdrawals from the scheduled banks. The consolidated return of scheduled banks as of 8th September 1939 revealed a decline of Rs. 5.11 crores in their demand and time liabilities and of Rs. 7.80 crores in their balances with the Reserve Bank. The situation, however, underwent a constructive change as the war proceeded and confidence was restored. Deposits began to swell and money rates also began to cheapen. The progress marked until the year-end can be apparent from the following table :—

SCHEDULED BANKS.

	Dec. 30, 1939	Sept. 1, 1939	Sept. 8, 1939	Dec. 29, 1939
	(in crores of rupees)			
Total Liabilities - - - -	238.6	248.4	242.7	251.3
Total advances and bills discounted - -	118.9	109.5	113.1	147.8
Cash held - - - -	19.1	32.5	25.6	25.6

Once the shock of war was absorbed, call money eased to $\frac{1}{2}$ per cent. The reduction in the Bank of England rate from 4 to 3 per cent. on 28th September and again to the pre-war level of 2 per cent. on 26th October further tended to ease the situation. During the last two months of the year, however, call rates again firmed up. At the end of the year night money was quoted at $2\frac{1}{4}$ per cent. apparently due to the seasonal demand for financing large stocks of silver and commodities at the higher prices then prevailing. The Calcutta index of wholesale prices recorded a rise from 100 in August 1939 to 137 in December, the price of raw cotton was almost double of what it was prior to the war, while the index for cotton manufactures also rose from 97 to 135. Raw jute and jute manufactures showed an even greater rise owing to the war demand for sandbags. In fact, it was a boomlet which caused a substantial rise both in the commodity and other industrial investment markets. This involved increased use of funds and hence the rise in the call and deposit rates at the year-end.

Meanwhile, currency was freely supplied by the Reserve Bank both in the form of bank notes and rupee coins and with the help of large sterling purchases, the Bank expanded its note issue against sterling securities to the extent of Rs. 48 crores between September and the end of December. To add to the plentitude of money, the Reserve Bank made substantial purchases of treasury bills and the total in its portfolio in the Banking Department amounted to Rs. 10.11 crores at the year-end. It also added to its portfolio in the Issue Department one crore of short-dated rupee securities purchased in the market. As compared with 1938, the position was as under at the year-end :—

RESERVE BANK OF INDIA.

	Dec. 30, 1938	Sept. 1, 1939	Dec. 29, 1939	Change over the year
	(in crores of rupees)			
Notes held in the Banking Department -	18.44	35.04	18.55	.11
Notes in circulation - - - -	187.99	182.13	235.92	48.07
Sterling securities - - - -	59.50	59.50	107.50	48.00
Silver coin - - - -	70.19	75.87	64.22	5.97

Despite the temporary rise and fall in the Bank of England's discount rate following the war, it is interesting to note that the Reserve Bank of India rate remained unchanged at 3 per cent. throughout the year.

The boomlet and the increased financial activity in India which followed the outbreak of the war were well reflected in the clearing house returns which totalled Rs. 852·90 crores in the four months, September to December 1939, compared with Rs. 655·03 crores in the corresponding four months of 1938.

Treasury bills sold to the public on behalf of the Central Government and the provincial governments were as under with previous comparisons :—

	Central Government's Bills (In crores of Rs.)	Average rate of interest (Rupees %)	Provincial Governments' Bills (In crores of Rs.)	Average rate of interest (Rupees %)
1939 - -	118·95	2 0 1	10·95	2 9 4
1938 - -	88·70	1 4 10	4·75	1 10 2

The market for gilts kept fluctuating mainly in accordance with the alternating trend of international politics. The year 1939 opened with Rs. 99·5 for 3½ per cent. Rupee Paper. With the German occupation of Czech districts in March, and the Italian invasion against Albania in April, it receded to Rs. 92·12·0. Talks of peace in May caused a rally to Rs. 97·3·0 but with Poland in the news it fell to Rs. 95·3·0 in July. With the payment of the 1939-44 Bonds it shot up to Rs. 98·4·0 on 14th August. With the declaration of war against Germany, business was suspended and Paper at once slipped to Rs. 86·12·0 and again to Rs. 80·7·0 on 28th September for cash. This rate attracted institutional investment-demand and the policy of cheap money having been pursued by the authorities, the quotations registered a rise to Rs. 87·12·0 at the year-end. Compared with the previous year the position was as follows :—

GILT-EDGED PRICES.

	December 30, 1938	December 30, 1939	Change over the year
London :	£	£	£
2½% Consols - - - -	70½	68½	— 2½
3½% War Loan - - - -	98	93½	— 4½
	December 23, 1938	December 23, 1939	
Bombay :	Rs.	Rs.	Rs.
3½% G. P. Notes - - -	98½	87½	— 10½
5 % Loan 1940-43 - - -	105	102½	— 2½
4 % Loan 1960-70 - - -	111½	102½	— 8½

The year 1939 closed with comparatively brighter conditions than at any time during the past decade. There is nothing in the situation to warrant a high price for credit, and if the Government will it, they have ample resources at their command to infuse more credit in the market without in any way disturbing the requirements of law.

EXCHANGE.

Money rates having hardened and there being seasonal export activity, the rupee-sterling exchange remained steady during the first four months of 1939 and the quotation for ready T.T. varied between ls. 5 ¾d. to ls. 5 ¼d. At the beginning of May, exchange began to sag and touched ls. 5 ¾d. on the 20th owing to easy money conditions. Subsequently, the Reserve Bank decided to discontinue sterling tenders until further notice. Thereafter, the quotation was maintained at just under ls. 6d. until the end of August. On the outbreak of the war, however, the entire outlook was changed. Large amounts of sterling were on offer. Thus, while the

total sterling purchases during the five months, April to August 1939, amounted hardly to £7,875,000, purchases during the first four months of the war, i.e., from September to December, 1939 totalled £35½ million. Owing to war several restrictions were imposed on foreign trade and foreign exchange operations by the Government of India. The Central Government delegated authority to the Reserve Bank to administer the regulations relating to the control of dealings in coins, bullion, securities and exchange. Exchange rates were fixed and controlled. The policy of the Exchange Control was to ensure that all foreign exchange transactions in India were done on the basis of the rates quoted by the London Exchange Control combined with the current rupee-rate for sterling and that no business be done outside these rates. Licences for gold exports were granted freely, provided, that the gold was consigned to the Bank of England or, if consigned to U.S.A., the relative dollar proceeds were sold to the Federal Reserve Bank on behalf of the Bank of England. In October 1939, the Reserve Bank entered the forward exchange market with a view to provide cover for exports and intimated its willingness to purchase sterling. The tap rate was raised the same month to 1s. 6d. and the market rate for ready T.T. improved to 1s. 5¾d. In addition to direct purchases, the sterling holdings of the Bank were augmented by transfers from the Secretary of State for Government purchases of war commodities and the proceeds of silver sales. The total amount acquired by the Reserve Bank during 1939 was over £63 million at the average rate of 1s. 5¾d., compared with hardly £19 million at 1s. 6¼d. in 1938. The surplus of sterling resources was so large that Government were reported to have employed a part of it for the purchase and partial repatriation of India's Sterling debt.

GOLD.

The year 1938 had closed with the £ at \$4·64 13/16. Owing to persistent flight of refugee capital to U.S.A., the £ depreciated to \$4·32 on 31st August, 1939. From 25th August to 16th September, 1939 there were violent fluctuations in the free Sterling-dollar cross-rate following the declaration of hostilities and the decision to unpeg the £. The cross-rate slipped in New York to \$3·75 on 16th September when the price of Rs. 43·8 per tola was touched for spot gold in Bombay. This was the record high touched for the past many decades. After the war broke out, sterling was devalued and officially pegged to the \$ at 4·02 to 4·06 and subsequently at 4·02½ (lower limit) and 4·03½ (upper limit). The price of London gold had already been fixed at £8·8 per oz. On the declaration of hostilities, the Government of India issued an Ordinance prohibiting the import or export of gold except on the authority of a licence granted by the Reserve Bank of India. Owing to the general uncertainty, the local gold market was closed for three days between the 4th and 6th September. Later on, it opened and improved. The price of spot gold during the last quarter of 1939 averaged about Rs. 41·11·0 per tola. The high and low prices for Bombay gold for each month in 1939 have been given below :—

SPOT PRICE OF GOLD PER TOLA IN BOMBAY.

1939						High			Low		
						Rs.	a.	p.	Rs.	a.	p.
January	-	-	-	-	-	37	8	6	37	1	0
February	-	-	-	-	-	37	1	3	36	13	9
March	-	-	-	-	-	37	1	0	36	14	9
April	-	-	-	-	-	37	1	0	36	15	3
May	-	-	-	-	-	37	2	3	36	15	9
June	-	-	-	-	-	37	2	6	37	1	0
July	-	-	-	-	-	37	2	0	37	1	3
August	-	-	-	-	-	39	2	0	37	1	3
September	-	-	-	-	-	43	8	0	38	12	0
October	-	-	-	-	-	41	11	3	40	11	3
November	-	-	-	-	-	42	4	0	41	3	3
December	-	-	-	-	-	42	7	0	41	11	6

Gold exports from India throughout the year 1939 were valued at Rs. 24·34 crores, as compared with Rs. 15·60 crores in 1938. The Reserve Bank of India continued to buy gold in India on behalf of their correspondents abroad. Such purchases amounted approximately to Rs. 14·81 crores at the current rates of exchange, compared with only 3·40 crores in 1938. World's production of gold during 1939 has been estimated at 40·4 million ozs., compared with 37·8 million ozs. in 1938.

As the war advanced, the publication of all statistics pertaining to the movement of treasure to and from India has been prohibited.

SILVER.

Practically, the first half of the year 1939 elapsed without any major change in the price of spot silver in India. Price fluctuations ranged between Rs. 53-10-0 and Rs. 51-12-0 per 100 tolas until the end of June 1939. This steadiness was the result mainly of the U.S. Treasury's buying price which remained constant till 26th June, 1939 at 43 cents per oz. Then the market began to ease owing to the uncertainty about the future policy of the U.S. Treasury with regard to the purchase of foreign silver. On June 26th, amendments were voted in the U.S. Senate which increased the Treasury's purchase price for newly-mined domestic silver from 64·64 cents to 77·57 cents, and prohibited further purchases of foreign silver. As a result of this, the spot price in Bombay fell to Rs. 48-4-0 at the end of June. On 28th June, the U. S. House of Representatives voted against the Senate amendments and ultimately decided to accept the conference committee's report reducing the price to be paid for domestic silver to 71·11 cents and reinstating the authority to purchase foreign silver. On 30th June, the House voted the acceptance of the Conference Committee's report but a filibuster in the Senate prevented action being taken by that body before midnight, at which time the existing powers had expired. After a delay of five or six days the Senate passed by a narrow margin the revised legislation and it was signed by the President on 6th July. This delay caused a violent decline in the spot price of silver in the London market. Following this, the U.S. Treasury dropped its buying rate below London parity from 43 cents to 40 cents the same day and again to 36½ cents on the following day, thus precluding the opportunity for profitable arbitrage operations. It appeared as if the U.S. authorities intended to permit the world price of silver to seek its own level. This fear caused an accumulation of speculative selling orders which broke the London market on 10th July to the lowest point of the year 16 1/16d. (Sterling) which in terms of gold was the lowest ever recorded (all-time low was 12d. gold touched in February, 1931) for spot and 15 5/8d. for forward. In Bombay, also, the year's lowest level was touched on 10th July, 1939 at Rs. 44-7-6 per 100 tolas for spot. On this day, the U.S. Treasury unexpectedly renewed its support by fixing its buying rate at 35 cents per oz. which fact encouraged investment purchases of silver in Bombay and the price began to look up.

The danger of the U.S. Silver Purchase Act being repealed having passed, and there being an actual shortage of spot metal, the bears of silver lost confidence and covered. The imminence and actual outbreak of the war and the consequential sharp break in the dollar value of the £ lent further support to quotations. Insurance rates jumped, exchange restrictions limiting shipments from America were enforced and a regular squeeze developed which was relieved only by making silver available from the Bombay mint. London silver touched the year's peak at 23½d. an ounce on 20th September. Indian spot silver also improved to Rs. 63-12-0 on 21st September owing to heavy buying both of spot and forward silver. Sales of silver by the Government of India in London against deliveries from the Bombay Mint arrested the rising trend for the time being. But on the 26th October the British Board of Trade issued an order prohibiting silver imports into Great Britain except under licence. Four days later the Government of India, also, took a similar step. These bans created two independent silver markets each one governed by different factors. Prohibition of

silver imports encouraged bull speculation and the year's high level of Rs. 66-4-0 per 100 tolas was touched on 1st December 1399 on the basis of rumours that the Government of India intended to suspend the sale of silver for delivery at the Bombay Mint. The excitement caused being great, the market remained closed for three days and then a modest price-reaction was recorded.

Later on, the Reserve Bank of India announced that with effect from 14th December, the sales of silver for delivery ex-Bombay Mint, which till then had been conducted through London brokers, would be conducted by the Bombay office of the Bank. As the Reserve Bank was also a seller of standard rupee silver of 916 fineness, the Bombay Bullion Exchange, by a resolution accepted such silver as good delivery from the May settlement at a discount of Rs. 2-4-0 under silver of 999 fineness. On 18th December the Reserve Bank, in exercise of the authority delegated by the Government of India, introduced the silver-imports-licensing scheme on a profit-sharing basis and fixed the minimum and maximum prices for the sale of imported fine silver covered by licence at Rs. 62 and Rs. 64 per 100 tolas respectively. With this, the speculative activity was restrained in the silver market and the year closed with the price of spot silver at Rs. 60-12-0 per 100 tolas.

According to available data, which is palpably incomplete owing to war-conditions, world production of silver in 1939 has been estimated by Messrs. Handy and Harman (New York) at about 266 million ozs. or the same as last year. Adding other supplies, namely, through demonetization, the total world supply of silver in 1939 has been estimated at 403 million ozs., compared with 600 million ozs. in the previous year. The sales by the Government of India have been estimated at around 65 million ozs. against hardly 2·3 million ozs. in 1938.

After 5½ years of silver purchases by the U.S. Treasury and after more than 2,200 million ozs. of silver have been bought, the goal set by the Silver Purchase Act is actually 291 million ozs. farther away than it was when the legislation was passed in June, 1934.

April 1940

Central Banking in India.

By MANILAL B. NANAVATI, ESQ., B.A., LL.B. (Bombay),
M.A. (Penn, Pa, U.S.A.)
(Deputy Governor, Reserve Bank of India.)

Manilal B. Nanavati, Esq.

Manilal Balabhai, Nanavati, B.A., LL.B. (Bombay), M.A. (Penn, Pa., U.S.A.), Deputy Governor, Reserve Bank of India. b. 11th January, 1877; *Educ.* : Baroda and St. Xavier's College, Bombay, and Wharton School of Finance, Pennsylvania (Pa.). Joined Baroda State Service, 1904; Director of Commerce and Industries, 1912, after holding minor posts in Judicial and Commerce Depts. ; from 1912 to 1931 held at various times posts of Registrar, Co-op. Societies, Director of Commerce and Industries, Development Commissioner, Collector and Accountant-General; Secretary and then President, Okha Harbour Board, in charge of the Development of Port Okha, 1926-1930; Revenue Commissioner, 1932-33; Naib Dewan (member of Executive Council), 1934-35; Deputy Governor, Reserve Bank of India, 1936. *Publications* : Report on the Agricultural Indebtedness in the Baroda State (1913); Report on the Sociological Survey of the Servants of the Khanji Department (1917); Report of the Industrial Development in the Baroda State (1919.) *Address* : "Leela," Juhu, Bombay.

IN recent years in India as in other countries there has been in evidence a considerable difference of opinion both among laymen and economists as to

the scope of central banking activity and the potentialities of central banks for the economic development of the community. This divergence of views is marked especially in India where owing to a variety of reasons the Reserve Bank has for some time past been the target of criticism from a section of the public. Such criticism when based on an intelligent appreciation of the possibilities and difficulties of central bank action is always welcome and in fact it is one of the best safeguards to ensure that the powers vested in central banks are utilised by them in the best interests of the country. Central banking technique is of comparatively recent growth—dating only from the latter half of the nineteenth century—and nothing perhaps can be more inimical to its progress than an indifferent attitude on the part of the community. But, when the criticism offered by individuals or interested parties is based upon a misconception of the nature of the functions of a modern central bank, it tends to cloud rather than solve the points at issue and thus to defeat its own purpose.

The types of criticism that often appear in India may be divided into two main groups. The first group of critics consists of those who believe that a central bank is a panacea for all economic evils—that it can prevent booms and depressions, control prices, and supply unlimited credit for the finances of trade and agriculture, and their discontent and impatience arise from the fact that the Reserve Bank has not been able in the short span of the last five years to bring about the sudden transformation in India's credit structure they had expected of it and which they imagine that the Bank is still capable of bringing about if its authorities proceed in the manner advocated by them. The second group comprises those who hold the opposite view that the functions of the Reserve Bank as expressed in its present constitution are unduly narrow and that the Act should therefore be radically altered so as to expand the Bank's powers. Both these types of criticism, however, have one thing in common in that they arise from a misunderstanding of the objectives and functions of modern central banks and the manner in which they are expected to achieve them. Some of the

critics also seem to ignore the fact that the success of central bank or for that matter the degree of control exercised by it over the money market is conditioned by the limitations of the environment in which it operates. Some others again suggest the adoption of central banking methods which have proved a success in other countries without taking into account how far such methods might prove suitable to the special requirements of India.

Critics who support the view referred to above that the Reserve Bank should prove a remedy for all economic ills over-estimate the contribution that monetary measures can make towards economic progress. In the years immediately following the World War of 1914, as a result mainly of the experience of the control measures adopted during the war period, there was no doubt an exaggerated belief among a certain section of bankers and economists regarding the ability of central banks to control prices, industrial activity, business cycles, etc., but many countries realised during the great depression of 1929-33 that monetary measures alone could not accomplish economic stability. As a result, the limitations of monetary technique have been recognised all the world over and to expect that the Reserve Bank alone will be able to cure the economic ills of the country is to misconceive the nature of its functions and to ignore the importance of a number of other factors vitally affecting our economy.

The second group of critics who feel that the scope of the Reserve Bank Act is unduly narrow also evince a lack of appreciation of the nature of functions of a central bank. Some of these critics appear to believe that all that is required to stimulate the commerce and agriculture of the country is that the Reserve Bank should place unlimited credit at the disposal of the scheduled and co-operative banks irrespective of either the position of the banks or the legitimate requirements of trade and agriculture. In other words, they imagine that the Reserve Bank should act as a sort of a commercial bank with large resources, lending continuously to co-operative and scheduled banks at cheap rates to enable them to lend freely to tradesmen and agriculturists. They, however, ignore the essential nature of central bank credit which is meant to be extended only in seasonal stringencies or other emergencies when the ordinary pool of savings deposited with the commercial banks or co-operative societies is insufficient to meet the increased requirements. In other words the basic concept of central banking is that it is a 'lender of last resort' extending credit when the ordinary resources of the market have already been utilised to the fullest extent.

To evaluate the activities of the Reserve Bank during the last five years it is thus necessary to bear in mind the basic functions of central banking as expressed in the Bank's constitution and the manner in which it has attempted to fulfil them. As stated in the preamble to the Act, the Bank has been organised for the purpose of regulating the issue of bank notes and the keeping of reserves with a view to securing monetary stability in British India and generally to operate the currency and credit system of the country to its advantage. In other words the primary function of the Reserve Bank is to regulate the currency and credit system of the country in the national interest. The Bank transacts its business not primarily for the purpose of making profit but for the sake of the ulterior effects of its policy upon the money market and the banking structure in general, and though it is technically a shareholders' bank on the joint stock basis, its surplus profits after the payment of a limited dividend to the shareholders accrue to Government. To enable the Reserve Bank to exercise its control over currency and credit, the Bank is entrusted with a monopoly of note issue, with the holding of reserves against notes, the duty of maintaining the stability of the external value of the monetary unit, the holding of the cash balances of commercial banks and the carrying out of the banking transactions of the Government. In addition it has the power of making loans and advances within the limitations placed by the Act to scheduled banks or joint stock banks having paid up capital and reserves of Rs. 5 lakhs or above, as also to provincial co-operative banks at rates determined by it in the light of the financial conditions of the country. It is also empowered to transact open market operations to enforce its credit policy. Besides this, it carries

out a number of service functions such as tendering advice to Government, the co-operative movement, and banks on financial matters and the collection and dissemination of financial and in particular banking statistics. The Bank also keeps in touch with foreign central banks for the purpose of obtaining information about economic conditions abroad and co-ordinating monetary policy in so far as it is beneficial to this country. Finally, the Bank formulates its own credit policy in the light of the information received from sources within and outside the country and also through personal contacts maintained by it with the leading personalities in the domestic and foreign money markets.

The manner in which the Reserve Bank has endeavoured to carry out in practice the functions enumerated above may now be described briefly. To take first its function of note issue, the Bank has been entrusted under Section 21 of its Act with the sole right of issuing notes in British India and Burma. The cover against the notes consists, in accordance with the Act, of gold coin, gold bullion, rupee coin, rupee securities of the Government of India and such bills of exchange as are eligible for purchase by the Bank. The Act has provided that not less than 40 per cent. of the total assets against note shall comprise of gold coin, gold bullion and sterling securities, although in practice the Bank has maintained a much higher proportion, the present percentage being 63·69. The Bank started issuing its own notes at the beginning of 1938 including distinctive designs for Burma since under the Burma Monetary Arrangement Order the Bank continues to be the central bank for that country in spite of its political separation from India.

Under Sections 40 and 41 of the Act the Bank is required to buy and sell sterling within certain fixed limits with a view to maintaining the exchange stability of the rupee with that currency. It is also obliged to provide the sterling requirements of the Government and for this purpose it generally purchases sterling from the scheduled banks either by tender or at an intermediate tap rate. With the outbreak of the war in September 1939 the Bank was entrusted by the Central Government with the authority under the Defence of India rules to administer dealings in foreign exchange, and movement of bullion and since then it has organised a special Exchange Control Department to deal with this work. The Bank's responsibilities and activities in this sphere have been considerably enlarged on this account. After the outbreak of the war the Bank was able to purchase large amounts of sterling from the scheduled banks and these purchases have facilitated the scheme for the repatriation of the Government of India's sterling debt.

The third function of the Reserve Bank is the carrying out of the banking transactions of the Government with which it has been entrusted under sections 20 and 21. The Bank maintains the accounts of the Central and Provincial Governments, and of the Government of Burma and transacts their exchange, remittance and borrowing operations. In the floatation of treasury bills and loans the Bank endeavours as far as possible to mitigate the effects of such operations on the money market and at the same time to enable Governments to borrow at the best available rates. In a large measure the co-ordination of the borrowing programmes of the various governments enables them to borrow more favourably than would have been the case otherwise. The Bank has also developed a system of underwriting loans with the co-operation of the larger scheduled banks and leading brokers which may be said to have accounted for the success of a number of loans issued by Provincial Governments in the last few years. During war times when the Government requirements are on the increase the scope of activity of the central banks to render such services is vastly increased.

The next aspect of central banking activity outlined above is its relations with the banking system. Under Section 42, every scheduled bank has to maintain with the Reserve Bank a minimum balance equal to 5 per cent. of its demand liabilities and 2 per cent. of its time liabilities. The accumulation of these reserves in the hands

of the central bank makes it possible for it to use them in emergencies to support the liquidity of the banking system when the commercial banks resort to it as a lender of the last resort. The Reserve Bank has also another instrument for the control of credit in the bank rate at which it will rediscount bills or make advances and through which it can attempt to influence the structure of interest rates in the Indian money market. In discounting for or making advances to scheduled banks, the Reserve Bank has to see firstly that it advances only against sound and liquid assets such as commercial bills and Government securities, and secondly that it does not compete as far as possible with other banks for commercial business, and that in general confines its advances to occasions when the supply of funds in the money market as a whole is insufficient for the requirements of trade or agriculture or is not available at reasonable rates. In India there has been a strong demand that the Reserve Bank should lend to banks in difficulties irrespective of their financial position, but it is obvious that the Reserve Bank as the guardian of the liquidity of the banking system cannot lock its funds in illiquid assets. The Bank however always stands ready to help sound banks in emergencies or panics occurring for any reason and in fact such assistance must be regarded as one of the primary objects for which the Bank was established. Furthermore, in accordance with the usual practice of central banking, the Reserve Bank when making advances, takes into consideration not only the type of the security offered but also the general character of the assets of the borrowing bank and the manner in which it conducts its business. Besides this, under the Act the Bank is authorised to lend only for short periods, the maximum period being only nine months, so that any finance from the Reserve Bank is intrinsically of a temporary nature.

No aspect of the Reserve Bank's activities has perhaps been debated more hotly in recent years than the relations between the Bank and agricultural finance. Here again the expectations of a number of critics appear to be that the Reserve Bank should act more or less as a state agricultural bank lending large amounts continuously to the cultivators to meet their manifold requirements and placing, so to say, unlimited credit at their disposal. The Reserve Bank Act, however, definitely circumscribes the field of the Bank's operations in this sphere and provides for assistance to agriculture on orthodox central banking principles. In the first place the Bank cannot advance to agriculturists direct and can operate only through a scheduled bank or a provincial co-operative bank, and secondly the maximum period for which it can make advances is limited to nine months so that it is authorised to lend only for short periods for tiding over a temporary shortage of funds.

Another important power which has been given to the Reserve Bank is that of conducting open market operations. Originally these operations were conducted by the central banks mainly for the purpose of making the bank rate effective or to offset the effects of Government expenditure and taxation. In recent years, however, they are utilised more for regulating the international movement of funds and for supporting the security markets. This power is specially useful during war time when prices of securities are subject to sharp fluctuations.

The rendering of advice to Government and banks on financial matters is yet another important branch of the Bank's activities. In its Agricultural Credit Department the Bank possesses an organisation which is continuously engaged in the study of problems on rural finance and which renders advice to Governments and the co-operative movement when consulted. The Reserve Bank also maintains close contact with the position of scheduled and non-scheduled banks and offers them advice when required. The Bank recently submitted to the Central Government its proposals for the reform of banking legislation which have since been issued to the public for opinion. It is a part of the Reserve Bank's policy to encourage the growth of a sound banking tradition and the proposals for legislation which it has formulated aim at the maximum protection of the depositors with the minimum legal interference.

From the foregoing brief review it will be seen that the establishment of the Reserve Bank has made it possible to remedy a number of defects which formerly beset the Indian money market. In the first place the lack of co-ordination between currency and credit which was responsible for many years past for undue stringency of credit during the busy season has been removed. Secondly, the Reserve Bank has provided a suitable machinery for the Central and Provincial Governments to co-ordinate their borrowing programmes. Thirdly, a considerable amount of control over the banking system has been established by the provision for the maintenance of compulsory deposits by the scheduled banks with the Reserve Bank. The Bank has also made seasonal advances to scheduled and co-operative banks and rediscounted treasury bills for them. It has also placed its advice at the disposal of Governments, banks and co-operative institutions whenever consulted. The Bank has also devoted a great deal of attention to the improvement of the banking machinery of the country. Nevertheless new problems are constantly arising and the outbreak of the war has created a number of special problems which are engaging the attention of the Bank. It is a part of the policy of the Reserve Bank to encourage among the public a better knowledge of its purposes and functions since such knowledge is vital to a proper understanding by the public of the services the Bank performs for the country. In-as-much as a large number of problems confronting central banking in the several countries of the world have a striking resemblance, central banking is not merely a national but a world problem, and has constantly to adapt itself to the changing influences of national and international economy.

Bombay Municipal Finance

By MATHOORADAS TRICAMJEE, Esq., B.A.

(Mayor of Bombay.)

Mathooradas Tricamjee, Esq.

Born 31st August 1894. Bachelor of Arts in History and Economics, Bombay University, 1914. Took to Social Service under Mahatma Gandhi and the Congress. Worked in the Satyagraha Office established for resisting the Rowlatt Bills, 1919. For some time Treasurer and then Secretary, Bombay Provincial Congress Committee, 1920-21 and onwards. Secretary, Swaraj Sabha. Secretary and one of the Trustees, Tilak Swaraj Fund. Entered the Corporation, 1923. Resigned, 1925, owing to ill-health. Member of the Congress Working Committee for some time, 1930. Sentenced to imprisonment twice in the Civil Disobedience Movement, 1930 and 1932. One of the organizers of the Congress Session held in Bombay, 1934. Re-entered the Corporation, 1935. Chairman of the Rent Enquiry Committee of the Provincial Government, 1938. Leader of the Congress Municipal Party, 1939-40. Fellow of the Bombay University. Mayor of Bombay, 1940-41. Published in Gujarati "Mahatma Gandhiji-Vichar Srishti," the first book on Gandhiji in Gujarati, 1919. Author of Marukunj—a T. B. patient's hand book.

THE Bombay Municipal Corporation is entrusted with the duty of running the Municipal Government of the City of Bombay. It is regulated by the "City of Bombay Municipal Act" of 1888 which is continually amended and modified to meet the changing circumstances and the new requirements. The scheme of the Act, however, remains the same as it was originally visualised. The Corporation is the supreme municipal authority. It enunciates policies and lays down programmes. It has the supreme control over the finances of the Municipality. It sets out in the form of budget estimates the expenditure that may be incurred in the ensuing year and fixes the taxes that may be levied for meeting the proposed expenditure. While the Corporation takes decisions, the Municipal Commissioner gives effect to them. The entire executive power of the Corporation vests in him; but his actions are in many ways regulated by the Act itself as also by the Standing Committee whose sanction and approval are essential in stated matters to enable him to act. There is thus a balancing of power and a happy blending of democracy and autocracy. The annual expenditure and income of the Corporation is in the vicinity of Rs. 350 lakhs which is met from the revenues raised by means of taxation and fees and miscellaneous imposts permissible under the Act. A large expenditure running into several lakhs is also incurred from the funds raised by means of loans. The budgeted income and expenditure for instance, for the year 1940-41, are 348 lakhs and 364 lakhs, respectively; the deficit of well nigh 16 lakhs, is proposed to be provided for from available surplus cash which is the saving of previous years. The duties of the Corporation are prescribed in the Act; they affect every possible aspect of civic life. Water supply and drainage, streets and roads, their cleansing and lighting, hospitals and maternity homes, primary education and city improvement are some of the matters that require the Corporation's attention. The taxes which are expected to give revenue to the Corporation are definitely stated in the Act. It is not open to the Corporation to levy taxes other than those that are specifically mentioned. They are property-taxes, town duty on scheduled articles and tax on vehicles and animals. Property taxes consist of (a) a

general tax ; (b) a fire tax ; (c) a water tax and (d) an halalkhore tax. These taxes are obligatory in the sense that the Corporation has to impose them. They are levied in the form of certain percentage on the rateable value of buildings and lands in the City. The general tax may vary between 8 and 17 per centum ; the fire tax between $\frac{1}{2}$ and $\frac{3}{4}$ per centum ; the water tax is determined with reference to the expenses for providing a water supply and the halalkhore tax has not to exceed 3 per centum. The general tax, the fire tax, the water tax and the halalkhore tax for the year 1940-41 are fixed at 11, $\frac{1}{2}$, $3\frac{3}{4}$, and 3 per centum, respectively, making the total of $18\frac{1}{4}$ per centum of rateable value. The Town Duty is levied at varying rates on articles consumed locally such as grains and flours of all sorts, wines and spirits and beers, sugar, molasses, gur and ghi, timber and firewood. The tax on vehicles and animals is, as the name suggests, a tax on vehicles that ply in the City and on horses and bullocks and other animals which are used as service animals. Of these three taxes, the group of property taxes forms the mainstay of the municipal finance. It is calculated to fetch over 260 lakhs out of 348 lakhs of income budgeted for the current year. The Town Duty brings to the Municipal Fund 14 lakhs and the Wheel Tax a little over $13\frac{1}{2}$ lakhs. The remaining amount of over 60 lakhs is made up from receipts from Markets and Slaughter Houses, sale proceeds of surplus land, license fees, educational grant from Government and miscellaneous sources. The expenditure is incurred on various items and services. Water Works, Roads, Drains and Sewers, and Primary Education require nearly 69 lakhs, 68 lakhs and 43 lakhs respectively. Improvement Schemes, Medical Relief and Education and Public Health need nearly 36 lakhs, 26 lakhs and 11 lakhs, respectively. Mechanical Department and Provident Fund, etc., Markets and Slaughter Houses and Fire Brigade claim nearly 15 lakhs, 11 lakhs, 6 lakhs and 5 lakhs, respectively. The total expenditure can also be classified under three heads : Establishment Charges, including Labour : Debt Charges, and other charges. They are 80 lakhs, 127 lakhs and 157 lakhs, respectively. These are staggering figures for annual expenditure and difficult to follow ; but they are real and inevitable. The City of Bombay has not been what it is today from its very inception. It has grown from a tiny place and insignificant position to its present magnificence in course of years at heavy expenditure. Its main water supply comes from a distance of 55 miles and to build up that has meant an expenditure of over $9\frac{1}{2}$ crores of rupees. A net work of complicated drainage system and miles of dust-proof and fine roads have needed nearly 7 crores of rupees. Many of the slums that existed in the City are cleared and new houses are constructed at a heavy expenditure. The City has required, therefore, crores of rupees to reach its present grandeur. And revenue from taxation as such cannot cope with such requirements. It is a recognised policy of public finance that works of a permanent nature involving a large outlay are to be financed from loans. It means that the expenditure is spread over a number of years and the annual revenue contributes towards payment of interest on loans and sinking fund which is ultimately utilised for repayment of loans. In this way, the burden of gigantic expenses is made tolerable, at the same time the benefit of amenities is made obtainable immediately. The Bombay Municipal Corporation is authorised to raise loans with the sanction of the Provincial Government. The Municipal Act prescribes some of the major conditions under which loans can be floated. A definite provision has to be made for setting aside annually such sums as will accumulate to the full amount of the loan on the date of repayment. Another important restriction that is put on the borrowing powers of the Corporation is in the form of fixing the maximum total amount of the loan that may be outstanding from year to year. The amount of the current loans cannot exceed twice the rateable value of buildings and lands in the City. This provision coupled with the provision for Sinking Fund bridles the ambitious programme of the Corporation. The outstanding loans of the Corporation on 31st March 1940 were Rs. 15.83 lakhs and the rateable value for the year being 13.49 lakhs the margin for fresh borrowing is still to the tune of 11.15 lakhs. The Sinking Fund also is regularly maintained at the level prescribed by the Act and is never allowed to fall below the legal requirements. The figures cited here refer to the loans raised by the Corporation. There is however, another section of loans. The improvement

Trust functioned for years together independently of the Corporation ; but about 7 years ago it was amalgamated with the Corporation, although its accounts are still maintained separately. The Trust Account has also large amounts of outstanding loans to show ; and the Trust loans are also governed by the same conditions and restrictions as govern Corporation loans. The current loans of the Trust Account amount to 16,42 lakhs.

This too short an account of Municipal Finance will reveal its stupendousness and yet the annual wheel of administration of finance turns regularly and correctly. It is no exaggeration to say that the Bombay Municipal Corporation stands second to none in efficiently managing vast revenue and loan resources that are at its disposal. It is due to well-manned service, to the constant vigilance of the Corporation and to the sense of public service that pervades the organisation.

May 1940.

Conditions in the Bombay Cotton Market from January 1939 to March 1940

By HARIDAS MADHAVDAS, ESQ., J.P.

(*Vice-President, East India Cotton Association Ltd.*)

Haridas Madhavdas, Esq.

Director of the East India Cotton Association since its inception and also of the previous body, the Cotton Contracts' Committee. Several times President of Association and for many years Vice-President. Is a recognised authority on cotton selection and senior partner of the well-known firm of Messrs. Amersey Damoder, who have been dealing in the cotton trade for over 85 years in all its branches. For many years Assessor of Indian and Foreign Cotton on the Survey, Appeal and Standard Committees of the East India Cotton Association, as Chairman and serving in the same capacity on the Standard Committee of the Indian Central Cotton Committee. Director on the Boards of the following companies: Bharat Spinning and Weaving Company, Ltd., The Union Bank of India, Ltd., the Central Bank of India, Ltd., the Associated Cement Companies, Ltd., the Tata Hydro-Electric Supply Company, Ltd., and several others. Is non-official adviser to the Government of India, regarding the Indo-Japanese trade agreement since its inception. Justice of the Peace and Hon. Presidency Magistrate, for the City and Island of Bombay.

THE year 1939 opened with feelings of trepidation on account of the uncertainties which were constantly cropping up in the international political situation. Also, perplexity regarding the American Farm Programme was another important factor. However, whilst trading in the New York Cotton Market was restricted, an optimistic feeling prevailed in Bombay on rumours of a cessation of hostilities in China. As a result of this, active speculative covering and option buying caused Broach April/May 1939 to rise to Rs. 164/2 on the 3rd January, but by the end of the month it had declined to Rs. 151½ on persistent bearish overseas market advices and increasing arrivals of cotton into Bombay from up-country. Despite the favourable parity, the export demand was negligible and the decline was accentuated further by a proposal to levy a sales tax on mill-made cloth and silk fabrics by the Government of Bombay. The result was that Broach April/May receded to Rs. 147½ on 16th February 1939. Thereafter, a slight improvement was seen subsequent to the report that there was to be an increase in the import duty on foreign cloth and so we found the price for this delivery appreciate to Rs. 152¼ on the night of the Budget on the 28th February. After this, prices fluctuated within narrow limits on fears of an early release of the U.S.A. Loan cotton and because of the Government's plans for an export subsidy. About the middle of May, prices began to firm up on account of the broadening of demand from the Far-East, especially from China, and in the belief that the export subsidy plan might be postponed by the American Government until after the International Cotton Conference which was to be held in Washington in September. Broach July/August which had been quoted around Rs. 154 and Rs. 159½ between the 1st and 12th May 1939, then rose to Rs. 171½ on the 25th May whilst the peak point of the 1938/39 season was reached on the 12th June 1939, when the quotation had reached Rs. 175½. However, this rise was somewhat overdone and on the settlement maturity date Broach July/August receded to Rs. 160, the contributory factor to this fall being

an easing off in the demand, following the collapse of the Chinese Dollar and so resulting in Chinese purchases in many cases being resold to Indian merchants. Also, the unfavourable political developments in the Far-East and the announcement by the American Government of a flat rate of $1\frac{1}{2}$ cents subsidy per lb. were additional influences. However, the 1938/1939 season ended on a note of excitement owing to the worsening of the political situation in Europe, and consequently Broach April/May 1940 closed at Rs. 158/2 on the 31st August 1939.

On the declaration of the War between the Allies and Germany on the 3rd September 1939 we witnessed violent and rapid fluctuations in the Bombay market and in sympathy with a rise in prices in Liverpool and New York, heavy short-covering, speculative and option buying brought about a hectic advance with the result that by the 15th September Broach April/May had touched a level of Rs. 224½. The Government authorities at this stage viewed matters with a good deal of misgiving, so much so that on the 22nd September all option dealings in cotton were prohibited. In addition to this, fears of a large American crop and the great difficulties experienced by shippers in obtaining freight had a weakening effect upon the market with the result that by the 5th October the price had dropped to Rs. 184½. In November large purchase of Jute and Hessians by the British Government, the weakness of sterling in relation to the dollar, the reported threat by the American Government to Japan to place an embargo on all exports to that country and the lapse of the ordinance prohibiting dealings in options were collectively factors which led to feverish short-covering and speculative buying not only by local interests but by Calcutta, and the result was that April/May Broach advanced sharply again to Rs. 289½ on the 30th November.

In December, however, quite a different tale has to be told. The month opened with Broach about Rs. 305, but subsequently weakness in Jute and Silver caused heavy unloading which brought about a decline to Rs. 267 on the 7th December. But, at this level the market found good support from Japanese Houses and as this coincided with firm advices from Liverpool and New York, there was again a very sharp rise, despite the Government's ordinance prohibiting option business, so much so that by the 18th of December the quotation reached a high point of Rs. 338½. This very rapid and hectic advance, however, was soon to be followed by the usual profit-taking, liquidation and nervous unloading which was accentuated by the weakness in Jute and other commodity markets. The result was that by the 22nd of December the April/May quotation had receded to Rs. 292½. At this stage there was renewed speculative buying principally by Calcutta operators, and these purchases coupled with short-covering caused the price again to jump up to Rs. 333 by the 5th January. At this juncture further support from the trade was lacking, there were heavy arrivals from up-country, and stocks were mounting up, with the result that this advance was short-lived and the rate dropped to Rs. 316 on the 6th January 1940. Despite the fact that the parity between Bombay and Liverpool widened considerably at the time, it still attracted but a mediocre demand for export. Then, President Roosevelt's peace hopes, combined with a further collapse in Jute prices brought about heavy realisation and by the 24th January, the rate had receded further to Rs. 262. The market by this time was well liquidated and the sentiment veered towards constructive operations so that a recovery appeared to be indicated. But, on the 22nd January 1940, the announcement of a proposed Excess Profits Tax, resulted in an all round slump in every market and Broach April/May encountered heavy liquidation and option selling, so that by the end of the month the rate had declined to Rs. 248½. Luckily, the next two or three days showed firmer foreign advices and there were reports of steadier Jute and other commodity markets. Calcutta operators and exporters again took a hand in the game and the result of their operations was another spurt with the quotation reaching Rs. 279½ on the 3rd February. Hopes of a further rise, however, were restricted by renewed peace talks, slump in Silver and other markets and the threat of a strike in the textile mills on the question of dearness allowance. In consequence

of these adverse factors there was another setback and the April/May price receded to Rs. 255 on the 12th February. At this level it was possible to find offerings being readily absorbed by exporters and commission houses so that the downward trend was checked and the market again firmed up on an improved spot demand despite the unsettled labour situation. The quotation at the end of the month was Rs. 278½.

In March 1940 an easier tendency prevailed in the market mainly on account of the incidence of the Mill strike and because of an easier trend in other commodity markets, particularly Jute. The accumulation of large stocks of Cotton on account of freight difficulties also had their effect with the result that Broach April/May had dropped to Rs. 251 on the 13th March. A further decline to Rs. 240 was registered on the 19th March but at this level support was forthcoming on account of the weakness of sterling in relation to the dollar and there was a slight recovery, to Rs. 254½ on the 21st March. Bullish hopes were again dashed to the ground however, by rumours of restrictions on exports and so there was another small reaction with the result that we had to submit to a quotation of Rs. 237½ on the 30th March.

There was a general fear in the trade that the fortnightly settlement clearings of the East India Cotton Association would not go through smoothly during the critical periods of wide and rapid fluctuations experienced between September 1939 and January 1940, but it must be said to the credit of the members that all these clearings materialised without one default and an all time record since the institution of the Cotton Clearing House in 1918 was the settlement clearing of the 29th January 1940, when an amount of Rs. 1,97,40,157 was paid out. It may be of interest to note that the total amount cleared through the Clearing House from 1st September 1939 to 31st March 1940 was Rs. 10,30,93,418.

As mentioned above, the periodical settlement of differences due on open contracts through the Clearing House, is a feature which was introduced in the Cotton Trade in 1918, from which period its control has come to be vested in one body. The regulation of the Trade at first started with the establishment of the Cotton Contracts Committee set up by the Government of India, under the Defence of India Rules. This Body was superseded by the Cotton Contracts Board under the Bombay Cotton Contracts Act No. I of 1919, which was also a temporary measure. With the eventful decontrol of the trade by the Cotton Contracts Board with effect from 1st June 1922, the East India Cotton Association Ltd., a company registered under the Indian Companies Act, 1913, took over the regulation and control of transactions in cotton in Bombay, and the Government of Bombay vested necessary powers in the Association by enacting the Bombay Cotton Contracts Act No. XIV of 1922.

This Act remained in force until 31st October 1932 when it was replaced by the Bombay Cotton Contracts Act No. IV of 1932. The Association is at present functioning under this latter Act which declares it as the only recognised Cotton Association. The Act provides that any contract which is not in accordance with the by-laws of this Association shall be void. It further provides that not less than one fourth of the total number of Directors on the Board shall be growers of cotton. For purposes of administrative facilities members of the Association are classified into three electoral panels, namely, Buyers, Sellers and Brokers ; but all members are entitled to attend and vote at general meetings of the Association. The Board of Directors consist of 20 Directors. The Buyers' and Sellers' Panels elect four Directors each and the Brokers' Panel elects six Directors. The fourteen Directors so elected co-opt one Director from any of these panels to represent the general body of members of the Association on the Board. There are also five representatives of growers of cotton on the Board, three of whom are nominated by the Indian Central Cotton Committee from amongst the growers' representatives on that Committee and two by the Government of Bombay.

May 1940.

The Indian Cotton Mill Industry

V. N. CHANDAVARKAR, ESQ., B.A. (CANTAB.), BARRISTER-AT-LAW.

(Chairman, Millowners' Association, Bombay.)

V. N. Chandavarkar, Esq.

Vithal Narayan Chandavarkar, B.A. (Cantab.); Maths. Trip. Pt. I. (1909); Nat. Sc. Trip. Pt. I. (1911); Hist. Trip. Pt. II. (1912); Barrister-at-Law of Lincoln's Inn. 1913; Chairman, Millowners' Association, Bombay eldest s. of the late Sir Narayan Ganesh Chandavarkar; Mg. Director, N. Sirur & Co., Ltd., Cotton Mill Agents. b. 26 Nov. 1887. Educ.: Aryan E. S. High School and Elphinstone High School, Elphinstone College, Bombay; and King's College, Cambridge; Advocate, Bombay High Court, 1913-20; Acting Professor of History, Elphinstone College, Bombay, July to October, 1915; joined the firm of N. Sirur & Co., 1920; Member, Bombay Municipal Corporation, 1926-1939; Chairman, Law Committee, 1928-29; Chairman, Standing (Finance) Committee, 1929-30; Chairman, Revenue Committee 1930-31; Mayor of Bombay, 1932-33. Elected Deputy Chairman, Millowners' Association, Bombay, March, 1935; Chairman in 1936 and 1940; Vice-Chancellor, Bombay University, 1933-39; Chairman, Bombay City Branch Indian Red Cross Society. Address: 41, Pedder Road, Malabar Hill, Bombay.

THE year 1939 will long be remembered in the annals of the history of the Indian Cotton Mill Industry for the marked contrasts which it presented in the position and prospects of the Industry. The low commodity prices which obtained for the greater part of the year prior to the outbreak of the war in Europe had a deleterious effect on the Piece-goods and Yarn Markets throughout the country, which remained more or less stagnant owing to poor demand; and the prices of yarn and cloth continuously fell until the end of August. The war, however, brought into play a different set of conditions and an entirely new situation, and although it would be idle to prophesy the ultimate effects of the war, it can be said that the outlook for the Industry towards the end of the year was somewhat more hopeful.

The Industry in the Province of Bombay continued to smart under the unjustified wage increases, amounting to over a crore of rupees per annum, granted as a result of the Interim Recommendations of the Textile Labour Inquiry Committee, although the assumptions on which that Committee had based their recommendations had shown signs of being falsified within a few months of the publication of their Report. As though the burdens already borne by the Industry were not sufficient, the Industry in the City of Bombay was mulcted to the tune of about Rs. 6½ lakhs per annum by the Urban Immoveable Property Tax imposed by the Congress Ministry in order to facilitate the inauguration of an ambitious programme of prohibition. The Sales Tax on manufactured cloth, proposed with the same object in view, was intended to raise an additional revenue of Rs. 25 lakhs per annum. The proposal to levy a sales tax on manufactured cloth had a very disquieting effect on the fortunes of the Industry in Bombay, since it was feared that, unless adequate safeguards were devised, and the stage and manner of the tax precisely determined, the tax would eventually be passed back to the manufacturer, thereby increasing still further the cost of manufacture of his products. Although licenses under the Act were taken by mills by the middle of the year, it is satisfactory to note that the difficulties of collecting the tax have since been realized and Government have decided not to proceed with the levy of the tax.

As though not to lag behind the Provincial Government in their solicitude for the "welfare" of the Industry, the Central Government imposed an additional duty of half an anna per lb. on imported raw cotton, with effect from the 1st March, in order to balance their budget. Apart from its direct effect of increasing the cost of production of indigenous manufactures, this additional imposition was calculated to encourage greater imports of yarn and piece-goods from Japan and Lancashire. In the case of yarn, including wastage, it was estimated that the duty on raw cotton alone would completely nullify the existing duty and that, in the case of cloth, the duty would give an indirect subsidy to competition from Japan and Lancashire to the extent of 10 per cent., thereby reducing the protection accorded to the Industry. The duty, moreover, was likely to hamper the diversification of the production of Indian mills on the lines recommended by the Tariff Board of 1927, and to which increasing attention had been paid by Indian mills in recent years. Mention might also be made of the surcharge of $12\frac{1}{2}$ per cent. on railway freight rates, effected from March 1st, 1940, which is bound to handicap the free transit of goods from one part of the country to the other.

The additional duty on raw cotton was soon after followed by a reduction of the import duties on Lancashire cotton piecegoods following the conclusion of the Indo-British Trade Agreement. The Agreement provided for a 5 per cent. reduction in the then existing duties, to be followed by a further $2\frac{1}{2}$ per cent. if imports from the United Kingdom did not exceed 350 million yards per annum. It is significant that both the additional duty on raw cotton and the reduction of the duties proposed by the Indo-British Trade Agreement were rejected by the Central Assembly, but were given effect to by certification by His Excellency the Viceroy.

The successive burdens imposed by the Provincial and Central Governments weighed down the Industry considerably, with the result that stocks accumulated, the prices realized proved unremunerative, double shift working was drastically curtailed, and competition with cheap imported goods became more and more difficult. In the case of Bombay City, for instance :—

- (1) Stocks of cloth with mills increased from 74,000 bales at the end of March 1938 to 179,000 bales in August 1939—a record high figure for the last six years ;

Yarn stocks also increased from 20,000 bales to 24,000 bales during the same period, but it is noteworthy that the volume of unsold goods held by mills at the end of August 1939 was more than double that in March 1938 ;

The orders booked by mills for forward delivery at the end of March 1938 were 325,000 bales. At the end of August, 1939, this figure was reduced by over one half to 157,000 bales, and this figure further declined to 142,000 bales in September.

- (2) In March 1938, there remained 3,780 looms and 283,000 spindles idle in Bombay City mills. At the end of August 1939, these figures had gone up to 8,700 and 606,800.

Similarly, in March 1938, 38,800 looms and 1,710,557 looms worked double shifts in Bombay. These figures came down to 25,725 and 1,094,290 in August 1939.

- (3) Extensive closure of productive machinery resulted in large numbers of workers being thrown out of employment, as will be seen from the following figures :—

				No. of operatives employed.		
				Day Shift.	Night Shift.	Total.
31-3-1938	-	-	-	107,712	48,102	155,814
14-7-1939	-	-	-	100,706	32,597	133,303
Difference						22,511

- (4) The price of standard longcloth produced in Bombay, which ruled at As. 9½ per lb. in March 1938, came down to less than As. 9¼ in March 1939, and fell as low as As. 8½ in August. Similarly, the wholesale quotations of 24s and 32s count Bombay mill-made yarns fell from As. 8 and As. 9-4 ps. per lb. respectively in March 1938 to As. 6-11 ps. and As. 8-2 ps. in March 1939 and to As. 6-8 ps. and As. 8 in August 1939.

The imports of foreign piece-goods into British India, which amounted to 395 million yards in the first eight months of 1938, rose to 411 million yards in the corresponding period of 1939. In the same period, the arrivals of cotton yarn shot up from 16.0 million lbs. to 26.6 million lbs. This heavy acceleration of cotton yarn imports was materially assisted by the additional import duty on raw cotton, which proved a great handicap to the fine spinning section of the Indian Industry. The seriousness of the problem presented by cheap imports from Japan and China on the position of the Indian spinning industry will be apparent from the fact that the Bombay Yarn and Silk Merchants' Association felt compelled to suspend all c.i.f. transactions in cotton yarn, mercerised yarn and staple yarn imported from China and Japan for two months from the 1st June 1939.

The production of cotton yarn by Indian mills rose from 842 million lbs. in the first eight months of 1938 to 852 million lbs. in the corresponding period of 1939. In the case of piece-goods, the output declined from 2,855 million yards to 2,719 million yards.

Exports of Indian made cotton yarn to foreign markets (including Burma) were more or less maintained at about 27 million lbs. in the first eight months of 1939, but shipments of cotton piece-goods showed a small shrinkage. It may be noted, however, that Egypt and Iran, which formerly were two of the best customers for Indian mill productions practically ceased to take Indian goods, owing to quota and tariff restrictions.

The consumption of Indian cotton by mills in India rose from 2,994,000 bales in the year ended 31st August 1938 to 3,120,000 bales in the year ended 31st August 1939. The total consumption of all types of cotton by Indian mills during the year ended 31st August 1939 amounted to 3,810,734 bales.

It will be seen from what has been stated above that, in spite of curtailment in production on a fairly extensive scale, the stocks of cloth with mills in Bombay continued to rise until they reached nearly 180,000 bales by the end of August. The position in other centres of the Industry was no better, and there were informal talks of concerted restriction of production by mills all over India.

The declaration of the European war on 3rd September changed the entire situation. With memories still fresh of the effects of the 1914-18 war, a speculative demand sprang up both in the cloth and yarn markets. Cloth and yarn prices did not, however, respond to the rise in the price of cotton, with the result that the margins for manufacturers showed little or no improvement. There were heavy inter-bazaar dealings in the cloth markets on a speculative basis, and at one time 20/20s calendered shirtings changed hands at about 13 annas a lb. With the fall in cotton prices towards the end of the year, speculative activity in the cloth markets also decreased, transactions between merchants for 20/20s shirtings passing at about 11½ annas a lb. As a result of the abnormal speculative activity due to the war there were heavy deliveries from mill godowns, and stocks at the end of the year were about half the maximum stocks reached towards the end of August; and this brought welcome relief to the mills. These stocks, however, remained mostly with the merchants, consumers' demand not having been sufficiently brisk to take up fully the extra deliveries. Owing to the rise in prices not only of cotton but of all stores used by the Textile Industry, and particularly

dyestuffs and chemicals, manufacturing costs increased to an extent not compensated for by the increased prices, and mills were, therefore, not anxious to sell, preferring to wait till prices improved further.

The war brought in its train an orgy of wild speculation in the cotton market, resulting in violent fluctuations in prices. Apprehending the possibilities of crises in the market, and as a measure of protecting the producer in whose interests it is necessary to maintain a high but steady price, Government felt compelled to issue an Ordinance prohibiting option trading, which had been one of the most important factors responsible for the violence of these fluctuations. The provisions of the Ordinance were later extended by a Governor's Act issued soon after the resignation of the Congress Ministry in November.

One of the most important problems which confronted the Industry soon after the outbreak of the war was the rise in the prices of foodstuffs and the measures necessary to protect the cost of living of the textile worker. The matter was carefully examined by the Millowners' Association, Bombay, who decided to meet the situation by the establishment of cheap shops selling grains and other necessities of life to the workers on credit at pre-war prices. By the middle of January 1940, more than 50 such shops were working in mills in the City of Bombay, and it was felt that, if full advantage had been taken of them by the workers, the purchasing power of their wages would be brought back approximately to pre-war levels. The establishment of these shops was not, however, acceptable to the communist leaders, who, unfortunately, control the workers' organizations in this City. Unsupported by any statistical facts, they put forward a demand for a 40 per cent. increase in cash wages at their Mahagai conference on January 1st, and at scores of meetings before and after that date. This figure was subsequently reduced to 25 per cent. and again to 15 per cent. during the proceedings before the Conciliation Board which was specially appointed by the Government of Bombay early in February this year. The recommendations made by the majority of the Board for the grant of a cash allowance of 2 annas per day of full work, equivalent to 10 per cent. of the average wage bill of the Industry, combined with the establishment of cheap grain shops selling at cost prices—although they did not agree with the recommendations—were accepted by the Millowners' Association, Bombay, with retrospective effect from 1st December 1939, but in utter disregard of the real interests of the workers—let alone the position of the Industry—these intransigent leaders called out a general strike of operatives from 4th March, which resulted in untold suffering and misery to thousands of textile workers and their families. From the very beginning the strike was sustained by wild promises and by resort to violence and intimidation, on an extensive scale at workers' residences; and in consequence, innumerable willing workers were prevented from leaving their homes for work. The anxiety of the general body of workers to resume work, if left free to do so, was testified by the fact that, despite the earnest exhortations of the strike leaders to the contrary, many workers accepted not only their wages for the month of February but also the dearness allowance for the months of December, January and February on the pay-day for March. The generosity of the quantum of the allowance granted by the Bombay Industry in comparison with the grants made in other centres and by other industries in India, and the date from which it was granted, was unfortunately not realized earlier, and the wanton strike was called off after the lapse of nearly forty days and after it had inflicted a loss in wages to the workers of no less than Rs. 60 lakhs.

One result of the war was that it created opportunities for the expansion of Indian mills' export trade with foreign markets. During the five months ended January 1940, India's exports of cloth rose to 99 million yards from 67 million yards in the corresponding period a year ago. It is too early to say whether, and if so, to what extent, these war time markets will permanently remain in Indian hands; much will depend upon the ability of the mills and merchants to supply the specialized needs of these

markets. It may be stated, however, that it would be difficult to retain these markets so long as Indian mills have to pay heavy duties on cottons which could not be economically grown in India.

The Indo-Japanese Protocol, which regulated the imports of cotton piece-goods from Japan to India on the basis of exports of Indian raw cotton to Japan, was due to expire at the end of March 1940, and representatives of the Governments of the two countries have for some time been engaged in the task of negotiating the terms of a new Protocol. Despite the unanimous opinion of industrial and commercial organizations throughout the country, the Government of India did not give notice of termination of the Indo-Japanese Trade Convention, in view of assurances that the Government of Japan had not the least intention of taking advantage of an interval that might arise between the termination of the Protocol and Convention, by tolerating heavy shipments of Japanese goods to India. A new problem has since arisen, and Japan has latterly been enabled, by virtue of the control which she has come to exercise over the major portion of the Chinese Cotton Industry, to ship unlimited quantities of cheap goods through China, where labour standards are known to be lower than in Japan. It is to be hoped that, in the negotiations, which will shortly be resumed, a satisfactory solution would be found to stop this growing menace to the Indian Industry. Such a hope, however, appears to be a forlorn one at the moment, if regard were had to the fact that the Government of India have, on the conclusion of the last Protocol, agreed to an increase of the maximum limit for the import of Japanese cotton piece-goods to 400 million yards.

In accordance with the terms of the Indo-British Trade Agreement, the duties on British cotton piece-goods were reduced, with effect from 17th April 1940, by a further $2\frac{1}{2}$ per cent., since imports of cloth from the United Kingdom in the year 1939-40 did not exceed 350 million yards.

To sum up : with a total import of cotton piece-goods from all countries of 650 million yards per year, and with a production of 4,250 million yards, of which only a hundred million yards are exported, the Indian Industry today supplies more than 80 per cent. of the country's needs of mill-made cloth. The consumption of piece-goods in the country itself may slightly increase if the cultivator continues to obtain the better prices now prevailing for agricultural products generally. There may also be some improvement in the offtake of piece-goods for war purposes. On the other hand, must be set the tendency to reduce consumption as the prices of piece-goods rise following the steep increase in cotton prices and the rise in the cost of manufacture brought about by higher taxation, both Central and Provincial, and the higher prices which have to be paid for stores of all kinds. Taking every relevant factor into consideration, it would perhaps be safe to say that, provided no major political upheaval takes place within the country in the near future, and also provided industrial relations are maintained in the coming months on a cordial basis, without being marred by ill-judged strikes brought about by enthusiastic leaders of the labour movement, there is no reason why the Indian Cotton Mill Industry should not confidently face the future in a spirit of subdued optimism.

May 1940.

APPENDIX.

**TABLE 1—DETAILS OF THE INDIAN COTTON MILL INDUSTRY AS
ON 31-8-1939.**

	Number of Mills.	Paid-up Capital.	Number of Spindles installed.	Number of looms installed.	Average number of hands employed. *
		Rs.			
1. Bombay City and Island - -	68	12,56,36,492	2,850,774	67,235	113,338
2. Ahmedabad - - -	77	4,78,30,395	1,901,872	46,853	77,859
3. Rest of Bombay Presidency (including Sind) - -	62	5,06,56,250	1,263,651	26,852	63,541
Total -	207	22,41,23,137	6,016,297	140,940	254,738
4. Rajputana - - - -	6	40,34,390	88,524	2,134	4,820
5. Berar - - - -	4	29,75,000	68,312	1,437	4,070
6. Central Provinces - - -	8	2,50,93,195	323,502	5,759	18,683
7. Bihar & Orissa - - -	2	22,49,018	27,500	269	..
8. Hyderabad (Nizam's Dominions)	6	1,00,14,515	124,140	2,157	6,918
9. Central India - - -	16	2,72,67,710	389,118	10,972	25,767
10. Bengal Presidency - - -	30	2,39,95,740	444,196	9,940	22,112
11. Punjab - - - -	8	22,14,750	111,264	2,647	6,568
12. Delhi Province - - -	6	1,69,57,050	108,634	3,112	5,030
13. United Provinces - - -	26	2,53,54,902	724,688	11,532	26,720
14. Madras Presidency (including Cochin State) - - -	58	4,89,25,828	1,368,309	6,712	51,660
15. Travancore - - - -	1	2,49,725	12,000	300	590
16. Mysore - - - -	8	89,17,800	165,062	2,607	9,033
17. Pondicherry - - - -	3	57,56,233	87,824	1,946	5,240
Grand Total -	389	42,81,28,993	10,059,370	202,464	441,949

The grand total of paid-up capital does not include the figures for 46 mills which made no returns as to capital.

*Does not include numbers employed on night shift.

May 1940.

The Textile Industry with Particular Reference to Ahmedabad

By HARIDAS ACHARATLAL, Esq.

(President, Ahmedabad Millowners' Association.)

Haridas Acharatlal, Esq.

Sheth Haridas Acharatlal was President of the Ahmedabad Millowners' Association for the year 1939, and is one of the most prominent mill owners in that city. This can be seen from the fact that he is a Director of the following companies in Ahmedabad and Gujarat :—

(1) The Maneklal Harilal Spg. & Mfg. Co., Ltd., Ahmedabad. (2) The Vijay Mills Co., Ltd., Ahmedabad. (3) The Gopal Mills Co., Ltd., Broach. (4) The Hariwallabhdas Mulchand Mills Co., Ltd., Ahmedabad. (5) The Shrinagar Wvg. & Mfg. Co., Ltd., Ahmedabad. (6) The Baroda Spg. & Wvg. Co., Ltd., Baroda (7) The New Baroda Spg. & Wvg. Co., Ltd., Baroda. (8) The Dinesh Mills Ltd., Baroda.

Additionally he bought the Gopal Mills at Broach, formerly known as the Whittle Mills Ltd., and has placed this concern on a profit-making basis.

He has been a Member of the Managing Committee of the Ahmedabad Millowners' Association for the last ten years and in August 1939, when Sheth Kasturbhai Lalbhai resigned from the Presidency and when the Association was threatened with a split, he shouldered the responsibility and carried out the administration in a very capable manner. Further still, he was a Member of the Committee of Management appointed by the Government of Bombay for managing the civic affairs

of the Ahmedabad Municipality, for about five years. He is also a Director of the Motor House (Gujarat) Ltd., Ahmedabad, and on the Local Advisory Board of the Central Bank of India. He has recently handed over the office of Presidency to his eldest son, Sheth Nanddas Haridas, who can be expected to carry out this onerous duty in an equally capable manner.

THE first cotton mill in India was started at Fort Gloster near Calcutta and it was not until 1851 that Bombay also commenced to manufacture cotton goods by means of power machinery. The initial venture was followed by other mills in Bombay and also Ahmedabad, and as they made good profits, they were followed by numerous others, so that towards the end of the last century we had something like 150 mills with a capital of Rs. 14,90,00,000 and equipped with 36,000 looms and 4,000,000 spindles.

The Swadeshi movement in 1906 gave a great impetus to the cotton textile industry and by 1914 this number had increased to 239 mills with a capital of Rs. 20,00,00,000 equipped with 90,000 looms and 6,200,000 spindles. With the various ups and downs of Indian political movements and the adjustment of the Tariff position by the Government of India, the industry has developed to a great extent and the position as it stands to-day in 1939, is that in this country there are 370 mills with 10,000,000 spindles and 200,000 looms producing 4,300 millions of yards of cloth, consuming 3,300,000 bales of Indian cotton and employing about 500,000 persons.

The first mill in Ahmedabad was started in the year 1859 and along with the expansion elsewhere, this centre has also made steady progress. The following table will show the change which has taken place in Bombay and Ahmedabad during these years :

	1919	1927	1937
	% in mills.	% in mills.	% in mills.
Bombay	32.9	24.7	18.6
Ahmedabad	19.8	19.6	21.9
The rest in India	47.3	55.7	59.5

Cloth produced in millions of lbs.

	1919	1927	1937
Bombay - - -	177	265	251
Ahmedabad - - -	71	105	170
The rest in India - - -	102	169	361

The progress of the mill industry elsewhere was also rapid owing to various reasons. In spite of all the Indian expansion, Bombay and Ahmedabad have kept up their own quota of production.

Ahmedabad has a population of something like 500,000 persons, of which 110,000 are textile mill workers. Geographically situated, Ahmedabad as such, has many disadvantages, *viz.*, no high water way, distributing centres of cloth at a very great distance and the source of supply of coal at an even greater distance. The only advantage it possesses is the proximity of cotton producing districts. But, as there are no competitive railways and no water transport it has the disadvantage of high freight rates as compared to Bombay. Since the inception of the mill industry in Ahmedabad it has made slow but steady growth, due to the low cost of living, high business acumen and the perseverance of persons who have been at the helm of affairs. Labour was also cheap which additionally helped the industry in its initial stages.

As a result of that slow but steady growth, to-day it involves large capital and other resources. There are now 68 mills with 19,340,000 spindles and 46,000 looms, with a paid up capital of Rs. 4,38,68,900, with Rs. 11,57,00,000 as Reserves and Depreciation and a total Block Account of Rs. 19,00,00,000 (19 crores). The total cotton consumption by the Ahmedabad industry was worth Rs. 7,42,87,000 in the year 1938 and the cloth sold reached a figure of Rs. 19,53,63,563.

In common with the mentality of the rest of India, in this centre capital is also shy and it was equally so in the past. In the beginning of the century, the banking system was quite in its infancy and hence the financing of the industries rested on a limited class of entrepreneurs (Managing Agents), who were unwilling to pioneer new enterprises unless chances of high profits were bright. In the opinion of several leading businessmen 10 per cent. to 15 per cent. on the investment was the minimum return required to attract money into new fields. It is also the opinion of the Indian Tariff Board that there should be a minimum profit of 10 per cent. on capital invested in protected industries.

In Ahmedabad the system which characterises the Indian method of raising capital has developed and the burden of financing the mills was thrown mainly on these entrepreneurs (Managing Agents). Their resources, when combined with those of their friends who subscribed to the capital of a company, were sufficient for its initial needs, but when expansion took place which called for more money, it had to be obtained by public deposits or by borrowings from the Managing Agents. For this reason the mill industry in Ahmedabad still remains uncapitalised.

The capital of a mill in Ahmedabad ranges from Rs. 5,00,000 to Rs. 10,00,000 in shares of the denomination of Rs. 500 to Rs. 1000. Only recently has there been a tendency to split them up in scrips of lower dimensions. An average mill requires Rs. 20,00,000 to Rs. 25,00,000 for the Block Account, so the Agents and the Promoters raise Rs. 5,00,000 to Rs. 10,00,000 by deposits for a long period of 5 to 7 years. Thus, from the share capital of the mill and from long term deposits the Managing Agents obtain the sum required to start a mill. As already stated the working capital is mostly obtained by means of the deposits from the Managing Agents and the public. So, as shown above, the Managing Agents have a two fold duty, *viz.*, one of financing the concern and the other of managing its daily working. The remuneration in Ahmedabad is mostly 3½ per cent. commission on the sales of the goods. Even this is given up wholly or partly if the company has not earned sufficiently either for depreciation or

for dividends to the shareholders. The Managing Agents do not charge any office allowance as is the case in Bombay or elsewhere.

This kind of system gave an impetus to start more mills. The average mill agent commenced with a small concern and expanded it from the earnings of the company which made it self-sufficient. After any expansion naturally the earning capacity increases considerably and that creates confidence with the public in the particular mill.

By their wise disbursement of profits after allowing for the requisite depreciation, which is so essential for the healthy growth of the industry ; by good dividends to the shareholders and by the creation of reserves and various other funds, the Agents have not only maintained their credit, but by installing up-to-date machinery they have retained the competitive position of the mills. Thus, all have contributed their own quota towards financing the concern. This sort of under capitalisation had its day but with changes in all spheres, the economic sphere also required adjustment and those who are at the helm of affairs have also changed their system. Those mills which wanted further funds either for the installation of new machinery or for changing their old plant have issued new shares, mainly preference, and thus added to the existing capital. Also, some of the Agents have converted their loans to the mill into share capital and some concerns have issued bonus shares out of profits, thus avoiding any financial uncertainty.

Along with this economic adjustment, mills in Ahmedabad have maintained a very high standard of equipment, with good technical staff. They have already introduced the latest type of High Draught machinery in place of the old mule or ring system in the Spinning Department. They have also introduced High Speed Winding and Warping machinery in place of the old system of winding and warping machinery and have installed High Pressure Steam Turbines in place of their old Steam Engines.

The climatic conditions of Ahmedabad are changeable, thus creating a very bad effect on the production of yarn but this too has been well met by the installation of humidifying plants which have considerably reduced the evil effects of these climatic changes. Thus, both from humanitarian and economic viewpoint, Ahmedabad has adjusted itself to new conditions.

Also, the fine count production which was once considered to be out of the question for Ahmedabad, has been resorted to and the mills are now producing cloth which can compete with that produced anywhere in the world. In recent years some of the mills have installed automatic looms producing absolutely faultless cloth. The progress has not stopped here but the owners have always kept abreast with the times, which is essential for manufacturing a high standard of cloth. Nearly all the mills have installed Bleaching, Finishing and Dyeing plants for processing their cloth. Some of them have installed Mercerising and Cloth Printing plants. Thus Ahmedabad to-day is producing up-to-date cloth both in fashion and technique.

The labour problem has been solved in an efficient manner by setting up proper arbitration machinery, for solving industrial disputes. The owners have always studied the well-being of the labourers and worked for the peaceful solution of industrial problems. Naturally there have been a few strikes but they were not of very long duration. Thus the evil effect resulting from disputes between capital and labour has been eliminated. In recent years Government have enacted several measures governing the relation between the workers and owners which have fulfilled the function of Ahmedabad's voluntary arbitration machinery. Even this voluntary arbitration machinery necessitated changes from time to time to coincide with new theories of both a social and political nature. Industrial relations call for consideration on all sides, not the least of which appertain to the economic aspect and, even in future, further changes will necessarily have to be made. But, Ahmedabad has always shown its willingness to conform to any new circumstances which have arisen in the past and it will continue to do so in future.

Indian Iron And Steel Industry.

By SIR ARDESHIR DALAL, Kt., I.C.S. (Retd.)

(*Special Director, The Tata Iron and Steel Co., Ltd.*)

Sir Ardeshir R. Dalal.

Sir Ardeshir Rustomji Dalal, Kt., I.C.S. (Retd.), Director and Partner, Messrs. Tata Sons, Limited; Director, Messrs. The Tata Iron and Steel Co., Ltd., The Associated Cement Cos., Ltd., The Andra Valley Power Supply Company, Ltd., etc. b. 24th April 1884. *Educ.* : Elphinstone College, Bombay, St. John's College, Cambridge. Assistant Collector, Dharwar, Colaba, Bijapur; Superintendent, Land Records, Belgaum; Collector, Ratnagiri and Panch Mahal; Deputy Secretary, Government of Bombay, Revenue Department; Ag. Secretary, Govt. of Bombay, Finance Department; Acting Secretary, Government of India, Education, Health and Land Departments and Municipal Commissioner, Bombay. *Address* : C/o Tata Iron and Steel Co., Ltd., Bombay House, Bruce Street, Bombay.

THE Iron and Steel industry in India is of modern origin. Although the art of making iron and steel was known in India in ancient times, as is evidenced by the iron column at the Kutub Minar near Delhi and the Damascus blades made from Indian steel, it did not keep pace with the times and became subsequently lost altogether.

India possesses many natural advantages for the production of iron and steel. The three most important raw materials required for the steel industry are iron ore, coking coal and limestone or dolomite for fluxing purposes. India possesses rich iron ore adequate for the steel requirements of the country for nearly a thousand years. The Indian ore is richer in iron content than the ores found in many parts of Europe or America. Although India's reserves of coking coal are not adequate for smelting all its iron ore reserves, there are sufficient supplies for coking coal to meet the needs of the Indian industry for a long period. Increasing attention has been paid during recent times to the importance of conserving the best kinds of coal for metallurgical purposes. The coal-fields and the iron ore deposits are situated within a short distance of one another. Ample supplies of limestone and dolomite are also found within a reasonable distance of the other raw materials. There is an abundant supply of labour which, though not as efficient as European or American labour, has shown itself capable of being trained. The steel industry in India need have no anxiety regarding markets in view of the large consumption of iron and steel within the country. The increasing industrialisation of the country renders it inevitable that the demand will increase rather than decrease in the future.

Jamshedpur in Bihar, Hirapur in Bengal and Bhadravati in Mysore are the principal centres of iron and steel industry in India. There have sprung up in Jamshedpur and Hirapur numerous Works based on the iron and steel produced by the Tata Iron and Steel and the Indian Iron and Steel Companies. The progress of these companies in recent years is an indication of the potentialities of industrial developments in the country.

The Tata Iron and Steel Company was registered in 1907. Its Works are situated at Jamshedpur, where the production of steel commenced in 1912. The original plant consisted of two blast furnaces and steel plant with rolling mills whose capacity was 120,000 tons of pig iron and about 80,000 tons of rolled steel. There has been continuous development since then and the output has greatly increased during this

period. In 1939-40, the production was 1,140,000 tons of pig iron and 762,500 tons of rolled steel and in 1940-41 the production is expected to be 1,250,000 tons of pig iron and 800,000 tons of rolled steel.

THE INDIAN IRON AND STEEL COMPANY.

About 1918 the Indian Iron and Steel Company was started in Hirapur, a few miles from Kulti. In 1936 it acquired the Bengal Iron Company and the amalgamated Company possesses four blast furnaces of modern type, necessary coke ovens, auxiliary plant, etc. The combined capacity is 850,000 tons of pig iron per annum. Their foundries can produce cast iron pipes, sleepers and general iron castings amounting to 100,000 tons per annum.

THE STEEL CORPORATION OF BENGAL.

The Indian Iron and Steel Company played the chief part in the promotion of the Steel Corporation of Bengal which has recently built its Works adjacent to the blast furnaces of the Indian Iron and Steel Company and has commenced the manufacture of steel within the last few months. Their immediate objective is to produce 200,000 to 250,000 tons of steel per year.

THE MYSORE IRON WORKS.

About the year 1920 the Mysore Government started the Mysore Iron Works with a capacity to produce 28,000 tons of charcoal pig iron per year. Out of this 7,000 tons are absorbed by cast iron pipes. Mainly with a view to dispose of the surplus pig iron a steel plant has been added by the Mysore Government intended to produce about 15,000 tons of bars and small sections and 5,000 tons of hoops.

In addition to these plants producing iron as well as steel, there are one or two small plants which make steel by melting scrap in electric furnaces.

The largest re-rollers in India are the Tinplate Company of India and the Indian Steel and Wire Products, Ltd. Their Works are situated at Jamshedpur close to the Steel Works of the Tata Iron and Steel Company, from which they draw their supplies of sheetbars and billets. The Tinplate Company has been producing over 50,000 tons of tinplates per annum during recent years. The Indian Steel and Wire Products has produced about 45,000 to 50,000 tons of steel rods, small bars, black and galvanised wire, etc., every year.

During the last ten years or so a large number of small re-rolling mills have sprung up all over the country working with scrap sold by the Railways and with steel billets either imported or purchased locally. These re-rolling mills produce chiefly bars and light sections.

The total capital invested in the iron and steel industry in India is estimated to be about Rs. 25,00,00,000. About 150,000 men and women are employed directly and indirectly by the Indian iron and steel industry, the re-rolling mills and the auxiliary enterprises. Including their dependants the total number of people depending on the iron and steel industry in India is about 600,000.

THE TATA IRON AND STEEL COMPANY'S PROGRAMME OF EXTENSIONS AND CAPITAL EXPENDITURE.

A new 1000-ton Blast Furnace in place of the old "A" Blast Furnace, the third unit of the Sheet Mill Extension, a Magnesite plant for making pea size magnesite and magnesite bricks and two Sandberg Ovens for controlled cooling of rails were all completed during the year 1939-40. Numerous other items of work are in progress such as extensions to the Power Plant and the third battery of Simon-Carves coke ovens which is expected to push coke within the next few months.

The Company's programme of extensions includes a plant for manufacturing wheels, axles and tyres, a new steel plant to increase the output of ingots and to make acid steel and a Billet Mill for small and medium forgings. A Benzol plant is being erected

for the use of Government. The installation of a Hoop and Strip Mill and Tube Mill in conjunction with Messrs. Stewarts and Lloyds has been kept in abeyance for a time.

When the Company's programme of extensions has been completed, it will be able to produce 1,250,000 tons of steel ingots and 900,000 tons of rolled steel.

Side by side with the installation of new plant, arrangements have also been made for additional water supply to the Works and the Town of Jamshedpur, extension of the sewerage and sewage disposal system, construction of additional quarters to the workmen, mass electrification of the lower rented quarters as well as the provision of additional schools and extended hospital and medical facilities.

During the five years ending 1938-39 the Company has incurred a Capital expenditure of about Rs. 5½ crores. In 1939-40 there was a further expenditure of nearly Rs. 1·6 crores which is part of a programme of Capital expenditure of Rs. 7½ crores sanctioned in 1939. It will thus be seen that, during the next two or three years more than Rs. 6 crores will be spent in additions and improvements to the Jamshedpur Works.

FINANCIAL POSITION OF THE TATA IRON AND STEEL CO., LTD.

Including the colliery properties, the gross block value of the Company at the end of 1938-39 was Rs. 26·69 crores. After deducting Rs. 12·56 crores on account of depreciation, the nett block expenditure stood at Rs. 14·13 crores.

The balance of the 7 per cent. First Mortgage Debenture stock of Rs. 3·35 crores issued in 1922 was paid off in 1938-39. The Company has obtained a loan of Rs. 2 crores from the Imperial Bank of India at a very low rate of interest against the security of 4 per cent. First Mortgage Debenture stock. The arrears of dividends on the Second Preference shares which together with interest had amounted to Rs. 249 lakhs on 31st March 1936 were gradually reduced until they were finally paid off in 1939. Against a nett payment on account of interest charges of Rs. 32½ lakhs in 1931-32 there was a nett receipt of Rs. 3·8 lakhs from interest in 1938-39. The cash balances and investments of the Company which were Rs. 31 lakhs on 31st March 1932 had improved to more than Rs. 2 crores on 31st March 1940.

*J. R. D. Tata, Esq.
Chairman, Tata Iron & Steel Co., Ltd.*

After providing for income-tax, super-tax, depreciation, increased railway freight and other charges, the Tata Iron and Steel Company has during the last few years distributed the following dividends :—

				1st Pref. shares	2nd Pref. shares	Ordinary shares	Deferred shares	Total.
				(Rs. in lakhs.)				
1934-35	-	-	-	4·5	156·10	-	-	160·60
1935-36	-	-	-	4·5	121·42	21·00	3·66	150·58
1936-37	-	-	-	4·5	104·94	35·00	17·66	162·10
1937-38	-	-	-	4·5	143·10	54·25	36·91	238·76
1938-39	-	-	-	4·5	153·51	63·00	45·65	266·66

GOVERNMENT ASSISTANCE.

As in other countries, large fluctuations in its fortunes were experienced by the Indian Steel Industry and in 1924 it became necessary for the Government of India to grant the industry fiscal protection partly by import duties and partly by subsidies.

Subsidies were removed after less than three years and have not been re-instituted. The protective duties were revised in a downward direction in 1927 and again in 1934. In 1934 the Tariff Board came to the conclusion that the expected reduction in costs had been achieved, that no protective duty was required on materials sold by the Tata Iron & Steel Company in competition with British materials and that the duties required on continental materials were more in the nature of anti-dumping duties than protective duties. At the present time duties on British steel are only ten per cent. *ad valorem* equal to revenue duties and those on non-British steel vary between Rs. 25 and Rs. 43 per ton. A special feature of the situation is that since the end of 1934 the Government have levied an excise duty of Rs. 4 per ton on all steel ingots produced in India and an excise countervailing duty of Rs. 5 1/3 per ton is added to the import duty on finished steel of the protected kind. Billets are free from import duty and the excise countervailing duty is only Rs. 4 per ton.

The present period of protection expires on 31st March 1941. Addressing the shareholders of the Tata Iron & Steel Company, Ltd., on May 25th 1937, the Chairman, late Sir Nowroji Saklatvala, declared :—

“ We have made much progress in efficiency during the first three years of the extended period of protection and we expect to make more during the remainder of the period. If we are able, in addition to this, to strengthen our financial reserves substantially, we expect that, short of an unforeseen economic set-back, we would be able to inform Government and the public of India in 1940 that we can face the future without protection, if reserve powers are maintained to meet dumping, should it arise.”

The progress since the declaration was made is such that the Tata Iron & Steel Company, and with it the Indian Iron and Steel industry, can look to the future with courage and assured prospects arising out of successful accomplishment in the past through increased and diversified production and decrease in cost.

LABOUR SITUATION IN 1939.

A regular profit-sharing scheme was introduced by the Tata Iron & Steel Company in May 1937 enabling the employees to receive in good years a share of the profits on a definite scale. Somewhat similar schemes were introduced by other concerns as a result of labour agitation and the profit-sharing system is now in force in a number of concerns comprising the steel industry. Notwithstanding such schemes the labour situation in the industry was full of anxiety in the first half of 1939. The tension among the labour of the Tata Iron & Steel Company eased only after the arbitration award given by Pandit Jawaharlal Nehru and Dr. Rajendra Prasad and the declaration of a 3½ months' pay as bonus under the profit-sharing scheme.

IMPORTANT EVENTS IN 1939-40.

By far the greatest event of importance to the Indian steel industry during the year was the outbreak of war in September 1939 which has once again brought to the forefront the extreme importance of the industry in the national economy, which was demonstrated over and over again during the last war.

The services rendered by the Tata Iron & Steel Company during the Great War were recognised on all hands. Lord Chelmsford, the late Viceroy of India, when he visited Jamshedpur in 1919 said, “ I can hardly imagine what we should have done during these years if the Tata Company had not been able to give us steel rails, which have been provided for us not only for Mesopotamia, but for Egypt, Palestine and East Africa.”

On the outbreak of the present War in September 1939, the Tata Iron and Steel Company immediately placed all its resources at the disposal of the Government of India up to the full extent of Government's requirements and promised full collaboration between the Steel Industry and the Ordnance Department for making and rolling special steels. The Steel Industry is giving priority over commercial orders for

steel required for war purposes, for Indian Railways and for the Engineering Firms in India who are supplying War requirements. Not until the conclusion of the present war could the full extent of the part played in it by the Indian Steel Industry be revealed.

The other outstanding events for the industry in India in 1939-40 were the large extensions completed by the Tata Iron & Steel Company which have been already mentioned and the starting of operations in December 1939 of the Steel Corporation of Bengal, who are now producing Billets, bars, structurals and sheets. A working arrangement has already been reached between the two Companies in respect of the sale of bars and structurals.

FINANCIAL BURDENS IMPOSED.

Of the financial burdens imposed on the industry in 1939, the most important was the increase of 33 1/3 per cent. in the railway freights on raw materials and finished steel by the B. N. Railway from 1st April 1939. The freights had been previously increased by the same Railway from 1st July 1933 which involved a burden of Rs. 27 lakhs on the Tata Iron & Steel Company. This increase was taken into account in recommending revised rates of protection from 1934 by the Tariff Board who even then uttered a note of warning about the importance of low transportation charges on raw materials required by the Industry. The Tariff Board stated that the total transportation charges paid for raw materials to the Railway by the Tata Iron & Steel Company per ton of metal were higher than similar charges paid by several Works situated in England, the Continent and the United States in spite of the fact that many of these Works were using about double the quantity of ore and 25 to 50 per cent. more coal per ton of steel than the Tata Iron & Steel Company. Owing to the high quality of the Indian ore and the low cost at which Iron ore and coal were being mined, there was a balance in favour of the Tata Company, but this advantage would be seriously diminished or wiped out by an increase in the transportation charges which were already an important item in the costs.

Nevertheless the B. N. Railway, with the knowledge of the Government of India, increased the freight rates on Iron ore, coal and other raw materials required by the Tata Iron & Steel Company from 1st April 1939 to the extent of about Rs. 21 lakhs per year and the freight on finished steel by a further amount of Rs. 21 lakhs.

The Railway rates have been further increased from 1st March 1940 by the imposition of a surcharge of 12½ per cent. as a war measure. This will impose a further burden of Rs. 22 lakhs on the Tata Iron & Steel Company.

Excise duties have been levied under the Coal Mines Rescue Rules from May 1939 and under the Coal Stowing Act from December 1939 on despatches of coal of which several lakhs of tons are used by the steel industry every year. These duties are conceived in the interests of the coal industry and the latter of the two in particular is meant to help in stowing coal mines and thereby conserving the coal resources of the country—an object in which the steel industry is vitally interested.

Like all other industries in India, the steel industry also will be greatly affected by the new rates of depreciation based on the written down value of the plant, etc., and the Excess Profits Tax levied from 1st October 1940.

CONTRIBUTIONS TO GOVERNMENT REVENUES.

The Tata Iron & Steel Company alone has contributed to the Government and public revenues about Rs. 3 crores in 1938-39 and over Rs. 3½ crores in 1939-40 by way of Excise and Customs duties, income and super-taxes, rents, royalties and railway freights.

IMPORTS AND EXPORTS AND FUTURE PROSPECTS.

Up to 1910 the country was dependent on imports from the United Kingdom, the Continent and, to a smaller extent, the United States for its requirements of steel for industrial and commercial purposes.

The imports of all kinds of iron and steel into India (including Burma) were highest in 1927-28 amounting to 1,450,000 tons, but gradually came down to only 400,000 tons in 1936-37 before the separation of Burma. Not more than 300,000 tons were imported into India, excluding Burma, in 1938-39.

Imports of protected steel by the public, which were as high as 915,000 tons in 1927-28, had come down to 217,000 tons in 1936-37 before the separation of Burma. In 1938-39 imports into India only were 162,000 tons.

Side by side with the decline in the imports of steel the total production within the country has gone up from 429,000 tons in 1927-28 to 935,000 tons in 1938-39 and nearly 1,000,000 tons in 1939-40.

Indian consumption of steel is mainly in the form of sheets, bars, rails, structural sections, plates, tinplates, hoops, tubes, wires and rods. No other form of steel is consumed to an extent reaching 20,000 tons a year. Since 1923 India's aggregate consumption has averaged about 1,000,000 tons a year and within the next few years nearly the whole of this quantity will be produced by the Indian industry.

For many years India has been one of the major exporters of pig iron in the world market. For basic steel and for certain kinds of foundry work Indian pig iron has established a high reputation. Indian pig iron is mainly exported to Japan and the United Kingdom and the United States. Pig iron exports from India which totalled 569,000 tons in 1929-30, declined to 218,000 tons in 1932-33 during the period of depression. Since then the exports have gone up to 629,000 tons in 1937-38 and 514,000 tons in 1938-39.

The dependence of India on the United Kingdom and the Continent for large supplies of steel has passed and is not likely to return. On the other hand, in the not distant future, in times of low local demand, the Indian steel industry will attempt to make an effective entry in the world export market. Indian exports of pig iron to Japan are, however, likely to be affected in the future owing to the expansion of the industry in Manchukuo.

RAPID GROWTH OF THE INDUSTRY.

Thirty years ago there was no production of steel in India for commercial purposes. Today by far the greater part of the Indian requirements are supplied from within the country. Within two or three years' time the Indian steel industry will be able to supply practically the whole of its requirements of steel in both ordinary and special qualities. The Indian steel industry is an outstanding example of the ability of the country to take up a highly developed and mechanised industry and develop it within a short period to the stage of practical self-sufficiency.

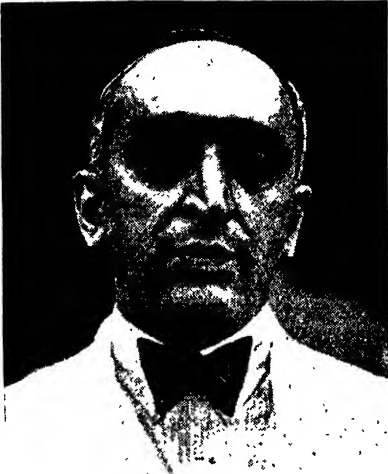

This has been rendered possible by help given in the form of protective tariff and subsidies by the Government of India and the Indian Legislature. The assistance rendered by the B. N. Railway to the Tata Iron & Steel Company in the form of low rates of freights both on raw materials and on finished steel up to 1933 should also be gratefully acknowledged ; but all these would have been useless but for the long period of planning and investigation carried out by the late Mr. J. N. Tata, India's great industrial pioneer, and his sons and associates both before and after the formation of the Tata Iron & Steel Company. The loyal and able assistance rendered by the expert officers from England, the Continent and the United States whose services were enlisted by the Indian Industry should also be mentioned.

The Iron & Steel industry in India is a vital national basic industry, essential in times of peace and indispensable in times of War.

The Cement Industry.

By SIR H. P. MODY, K.B.E.

(Chairman, Associated Cement Companies, Ltd.)

Sir H. P. Mody, K.B.E.

Sir Hormasji Peroshaw Mody, M.A. (1904), LL.B. (1906), K.B.E. (1935), Advocate, High Court, Bombay (1910), b. 23rd September, 1881. *Educ.*: St. Xavier's College, Bombay, Member of Bombay Municipal Corporation since 1913 and President, 1923-24; Chairman, Bombay Millowners' Association, 1927 and 1929-34; President, Indian Merchants' Chamber, 1928; President, Employers' Federation of India since 1933; Member, Indian Legislative Assembly since 1929; Member, Round Table Conference and Reserve Bank Committee; Director, Tata Sons, Ltd.; Delegate, International Labour Conference, Geneva, 1937; Chairman, Associated Cement Companies; Chairman, Central Bank of India; President, Cricket Club of India. *Publications*: The Political Future of India (1908); Life of Sir Pherozeshah Mehta (1921). *Address*: Cumballa Hill, Bombay.

INDUSTRIAL development in India started a long time ago with the Textile industry, but the growth was very slow, and the rise of most of our large-scale industries has been the work of only the last 25 years. Cement was practically

unknown at the beginning of the century, except to a few trained engineers; the ordinary artisan and 'mistry' was ignorant of its use as a building material.

When the industry was started, it had more than its share of teething troubles and the first venture soon came to grief. The total consumption in the country was only 150 thousand tons, most of it imported from Great Britain and other countries. Cement was a new product trying to enter into competition with other building material known to this country for centuries, and its use required a degree of technical skill not called for in the case of other products. A considerable amount of propaganda had to be done to make India cement-minded, and its success may be judged from the fact that today she consumes ten times the figure of 1914. Indian manufacture, in this instance, has not merely replaced the imported articles but created a demand which has led to the establishment of a large-scale industry, fully capable of supplying all the country's needs.

The credit for this position must be given to the pioneering concerns which are now merged in the A.C.C. They had to face many difficulties until they realized that without some form of Rationalization, it was idle to hope for the stabilization of the industry. They took active steps accordingly for the purpose of regulating production, prices and marketing, undertook a country-wide propaganda and set up an efficient technical service. A flourishing industry was thus established which was an outstanding example of what Rationalization could achieve.

Ill-planned and ill-regulated competition has recently overtaken the industry, and for the time being at any rate, supply is greatly in excess of demand, creating a dislocation which might well have been avoided. The position, however, of the A.C.C. as the largest single organization in the industry, with a network of factories in all the principal consuming centres, is very sound. Its products maintain a high standard and command a ready market, and its technicians are at the disposal of every consumer, large or small. A.C.C. cement has gone to the making of bridges and canals, roads and buildings, wells and drains and scores of other objects throughout the country.

The War has brought about a temporary check to the normal expansion of demand. Building activity has slowed down, and public works programmes have been held up. In Bombay, which is a large consuming centre, the Urban Immoveable Property Tax has aggravated the tendency towards a decline of consumption. As against these adverse factors must be set down a large export demand, and a growing appreciation of the use of cement for purposes other than building. In the result, so far as the A.C.C. is concerned, the position is not expected to be different from that of last year.

The future must depend a great deal upon the continuance or otherwise of the unhealthy competition which has overtaken the Industry. There are certain pointers, however, which must not be ignored in any consideration of the question. In spite of the development of the last few years, Indian consumption per head of population is ridiculously low compared to Western standards, and it is obvious that there is an enormous scope for expansion. The demand for better roads, to mention only one line of development, has been accounting for some time for a rapidly increasing consumption, and any one who knows the country can readily imagine what possibilities there are in this direction. There are other uses for cement which are less well-known, such as providing for lining for canals, which might some day account for a large demand. It is interesting to note, besides, that the A.C.C. has been carrying on its educative campaign into the country-side, and demonstrating to the agriculturist the manifold uses to which cement can be put. Altogether, a vast potential development exists, and in time to come I am confident the industry will assume much larger proportions than it has done.

Development must proceed on scientific lines, however, if cement is to escape the periodic slumps which have overtaken most industries. While enterprise and vision have to characterise all planning for the future, production must not be allowed to run too far ahead of consumption. Sites have to be carefully chosen, and a great deal of prospecting must precede the establishment of factories. So far as the A.C.C. is concerned, it may be legitimately claimed that the future is safe in its hands ; it has the resources, the men and the technical direction which go to the building up of a great industry.

May 1940

Hydro-Electric Power Development in Western India

THE TATA HYDRO-ELECTRIC COMPANIES

By W. S. NELSON, Esq.

(Managing Director, Tata Hydro-Electric Agencies, Ltd.)

W. S. Nelson, Esq.

Mr. W. S. Nelson is Managing Director of Tata Hydro-Electric Agencies, Ltd. and also is a Director of the United Eastern Agencies, Ltd., the Karachi Electric Supply Corporation, Ltd., the Poona Electric Supply Co., Ltd., the Nasik-Deolali Electric Supply Co., Ltd., and the Broach Electric Supply and Development Corporation, Ltd.

INTRODUCTION.

THERE is great fascination in contemplating the generation of power at the great Hydro-Electric Works of the Western Ghats which are the largest in India and one of the most important in the world. Rivers the world over and waterfalls of every description have been harnessed and their energy turned to the account of man; but it required the instinct and unfaltering faith of the true pioneer to visualise the possibilities that remained unavailed in the riotous and torrential storm waters of the periodic Indian monsoon, playing on the almost vertical sides of the Western Ghats.

The rain waters of raging monsoons conserved in reservoirs constructed just behind

the escarpment of the Ghats have now been turned into a mighty agency to provide a reliable and efficient source of electric energy to a wide area in the Province of Bombay available for lighting and the many other benefits of electricity in the home, commercial establishment and factory, as well as an economical source of power supply to the important industries of Bombay and for the electrification of the Railways.

HARNESSING THE MONSOON.

The conception of hydro-electric power first arose in the late Mr. J. N. Tata's mind when he was prospecting for his textile mills in Central India, for in 1875 he considered the famous Marble Rocks Falls at Jubbulpore as a possible source of energy. In 1897 he joined a Syndicate, the purpose of which was to harness the Doodh-Sagar Falls in Portuguese India. One of the members of the Syndicate, Mr. David Gostling, another man of wide vision, proposed that their activities be transferred to the hinterland of Bombay where unlimited potential energy was available as a result of the heavy rainfall on that section of the Western Ghats.

Mr. Tata by his enthusiasm had, prior to his death in 1904, made plans for a Public Utility on a large scale. He proposed to

Late Mr. J. N. Tata.

transform Bombay and Poona as well as the surrounding and intervening districts by an adequate supply of electric light and power. He visualised Bombay as a smokeless industrial centre. He also foresaw that electric traction on both the Railway Systems serving Bombay would revolutionise the convenience and cost of transport. The thoroughness of Mr. Tata's plans and the wealth of detail he had assembled enabled his successors to make these dreams come true.

ORIGINAL PROBLEM SOLVED.

Most water power schemes are suggested by visible potential energy in the form of a waterfall or the rapidly flowing section of a river. In the case of the Tata Hydro-Electric project, water had to be impounded during the monsoon for use throughout the entire year. The mountains of Western India rise between 2,000 and 4,000 feet above the sea-level plain, and the annual rainfall at these elevations ranges from 100 to 400 inches. This water is precipitated during the monsoon season, which is of about 3½ months duration, and flows in torrents down the ravines and almost vertical slopes of the mountains westward, while on the eastern slope, the water that is not rapidly absorbed by the arid soil of the Deccan, forms the source for several of those great rivers which flow into the Bay of Bengal.

With the assistance of Government topographical and geological maps and surveys, together with the records of Meteorological data which was then available, the Tata engineers selected the most suitable and economical locations for their undertakings. A feature, then unique in hydro-electric engineering, was made the basis of the project ; this involved the diversion, for useful work, of water from the eastern to the western watershed.

In the year 1905 Tatas secured the services of engineers who had experience of hydro-electric work on a large scale. They also secured the valuable support of Lord Sydenham, the Governor of Bombay, and himself an engineer, so that by 1907 the Government formalities were completed and a license was granted to supply hydro-electric power to Bombay.

THE TATA HYDRO-ELECTRIC POWER SUPPLY CO., LTD.

The original attempt made by the London members of the Syndicate to float the first issue of two crores of rupees in that City failed. The project was too visionary for Threadneedle Street.

In 1910, Sir Dorabji Tata set himself to the task of securing the necessary capital in his own country. He accordingly undertook a tour of India, visiting many of the Indian Princes, who were so impressed by Sir Dorabji's faith in the Hydro project that by the end of the year ample capital was assured to begin work on the first stage of the development.

The engineering and construction of the first Hydro-Electric unit presented many difficult problems. The hard Deccan trap-rock offered peculiar resistances to tunnelling operations. The determination on the part of the promoters, and engineers coupled with a labour force, drawn from the most hardy workmen in India, resulted in the operation of Khopoli Station in 1915.

Khopoli Power Station is fed from a chain of lakes at Lonavla, Walwhan and Shirawta, named in the order of increasing size. The aggregate water surface of these artificial lakes is approximately 9 square miles. The dam which forms Shirawta Lake

is approximately $1\frac{1}{2}$ miles long and has a height of 83 feet. It is entirely mountain-locked, and its waters empty into Walwhan Lake through a tunnel nearly a mile in length. Linking the Walwhan Lake, the Lonavla Lake, and the forebay (which is 1,725 feet above Khopoli Station) is an artificial river of masonry, spanning valleys and cutting through hills. The length of this aqueduct is approximately four miles.

Work was begun on the Lonavla Dam in 1911, and in 1915 the first current was flashed over the transmission lines to operate the spindles of the Simplex Mills in Bombay.

THE ANDHRA VALLEY POWER SUPPLY CO., LTD.

The second hydro-electric unit was promoted in 1916, and war-time difficulties hampered its beginning. The power station of this unit is supplied by a single lake, water for which is provided by a catchment of over 48 square miles. The Andhra reservoir has a surface area of $12\frac{1}{2}$ square miles. The dam which impounds the waters is 190 feet high and 2,432 feet long. It is located at the eastern end of the Andhra Valley, where it is narrowest. Water is drawn off at the western end of the lake, through a tunnel $1\frac{1}{2}$ miles long. This tunnel conveys the water, under the mountain, at the foot of which the Bhihpuri Power Station is situated. This station went into operation in October 1922.

THE TATA POWER CO., LTD.

The third scheme, started in 1919, is the largest of the group. The natural catchments of the Nila and Mula Rivers, forming two arms each about fifteen miles long, were dammed at the junction of their valleys ; but owing to the first large Satyagraha movement in India started by the landowners in the valley, work on the dam was stopped for two years until acquisition could proceed smoothly. Finally, the Company incurred an expenditure of Rs. 51 lakhs to acquire the land for submersion by paying all dispossessed landowners an enhanced acquisition value together with a bonus of 15 per cent. to 25 per cent. in excess of Government awards according to the class of the land acquired.

At this stage, owing to the general financial stringency which followed the post-war boom period, the Company found itself severely handicapped by non-payment of calls by a very large number of its shareholders, against whom legal action was taken at a cost of Rs. $3\frac{1}{2}$ lakhs, and eventually Rs. 120 lakhs were realised towards unpaid calls.

Meanwhile, timely assistance was given to the Company by the Commissioners of His Majesty's Treasury in England through whose guarantee the Tata Power Company was enabled to issue "A" Debentures for £1,000,000 under the Trade Facilities Act under an agreement with The Whitehall Trust, Ltd., which bound the Company to purchase its plant and equipment in England. And, this timely assistance was given by the British Treasury at the favourable interest rate of $4\frac{1}{2}$ per cent. per annum, which was subsequently reduced by them to 2 per cent.

The collection of calls through the Courts and the large deficit left in spite of legal action necessitated the raising of further loans.

A "B" Debenture loan was negotiated with the Law Debenture Corporation, Ltd., for £1,000,000 of which £750,000 was issued in London at $7\frac{1}{2}$ per cent. per annum.

Finally, for the completion of the project, as all costs had been greatly enhanced due to the post-war conditions, a further sum of Rs. 1.15 crores was borrowed from its sister concern, the Tata Hydro-Electric Power Supply Co., Ltd., on the collateral security of the £250,000 unissued "B" Debentures and a third charge on its total assets.

The position today is that the "B" Debentures were entirely paid off in 1938 with the permission of the "C" Debenture holders who gave up their lien on the £250,000 of unissued Debentures. The "A" Debentures are automatically being reduced by an Annual Sinking Fund and will be paid off in 1948. The money borrowed on the "C" Debentures have been converted to a loan at 6 per cent. in place of the original 8 per cent. and the loan has been reduced from Rs.1·15 crores to Rs.1 crore.

The Tata Power dam forms a lake with a surface area of 15 square miles. The water impounded in this lake is collected from a catchment area of almost 100 square miles. The dam is 146 feet high and 5,123 feet long. From the Western end of the lake, a tunnel $2\frac{3}{4}$ miles in length was made under the mountains through which the water is supplied to the Bhira Power Station located at the foot of the mountains.

The Tata Power hydro-electric unit commenced supplying electric energy to Bombay in April 1927.

MANAGEMENT.

Messrs. Tata Sons Limited were the Managing Agents of the three Companies until 1929. In that year they felt it desirable to have the assistance in the management of an organisation specialising in the operation of Public Utility Companies. With that object in view, a partnership arrangement was entered into between Tata Sons and the American and Foreign Power Company, Inc. and a new company "Tata Hydro-Electric Agencies Limited" was formed. This Company has been responsible for the successful operation of the Hydro-Electric Companies for the past 10 years.

THE TATA HYDRO SYSTEM.

The three Hydro-Electric Companies have the benefit of unified management, being operated as a single system and sales are distributed between them in accordance with a Reciprocal Agreement whereby sales are allocated between the Companies in accordance with their rated capacities.

The Tata Hydro System has three large power stations with a present total capacity of 250,000 HP. The transmission system consists of 268 miles of 100,000 volt overhead lines to Bombay and Poona and 200 miles of high-tension underground distribution system in Bombay. This complex system of generating plants and transmission system is so interconnected and protected that no interruption to service is likely from a transmission line failure at any point in the system.

The Tata Hydro system supplies power to the important textile industry and other large industrial undertakings in Bombay, as well as the various retail distributing companies which supply urban and suburban Bombay, Poona and five other smaller localities.

The B. B. & C. I. Railway is electrified from its terminal points in Bombay 35 miles north to Virar. The G. I. P. Railway is electrified 85 miles on the main line to the north and 119 miles to the south-east from Bombay. The Hydro system now supplies all the electric traction requirements of both Railways under a new contract which became effective on 4th February 1940.

During the year 1939, the Hydro Generating Stations produced 696,430,000 units to supply light, heat, traction and power in the City of Bombay and surrounding districts. The equivalent production by steam plants would have required the combustion of approximately one-half million tons of coal. This would have resulted in a generous and disagreeable deposit of dirt and soot with a precipitation of about 4,000 tons of sulphuric acid, the destructive properties of which Bombay has been spared.

A comparison of power sales and revenue from power sales of the Tata Hydro System for the past five years is given herewith :

Year.	Power Sold Millions of Units.	Revenue Lakhs of Rs.
1934-35 - - - -	472	165·06
1935-36 - - - -	492	159·26
1936-37 - - - -	503	158·27
1937-38 - - - -	613	183·40
1938-39 - - - -	626	171·38

The following statement gives the position of the working of the three Companies for the year 1938-39 :—

Company.	Hydro.	Andhra.	Power.	Total.
	Lakhs of Rupees.			
Total Assets - - - -	529·86	549·03	803·41	1882·30
Total Liabilities (including Debentures) -	134·38	190·90	212·59	537·87
Excess of Assets over Liabilities -	395·48	358·13	590·82	1344·43
Pref : Capital - - - -	89·28	49·34	86·97	225·59
Rate of Interest on Pref : Capital -	7%	7%	7½%
Ordinary Capital - - - -	180·00	159·58	339·77	679·35
Power Receipts - - - -	34·06	48·68	88·64	171·38
Other Receipts - - - -	15·21	1·78	3·44	20·43
Total Receipts - - - -	49·27	50·46	92·08	191·81
Profits before Depreciation - - - -	32·74	28·66	59·62	121·02
Total Dividend Paid - - - -	19·75	15·42	32·01	67·18
Dividend on Pref : Capital - - - -	6·25	3·45	6·52	16·22
Dividend on Ordinary Capital - - - -	13·50	11·97	25·48	50·95
Percentage on Ordinary Capital - - - -	7½	7½	*7½
Price of Ordinary Share on 19-3-1940 -	159	1517·8	1362·8
Yield - - - -	4·72%	4·94%	5·50%

* Inclusive of 1 per cent. bonus.

RAPID GROWTH OF THE INDUSTRY.

Sales of electrical energy by the Tata Hydro System have nearly doubled in the past ten years. This has made possible progressive reductions in the rates charged to consumers in accordance with the Companies' policy, with the result that the overall average rate per unit sold has decreased to approximately 60 per cent. of the average rate ten years ago.

The steady progress of industrial development in Western India has been further accelerated by the outbreak of war and it is expected that Bombay with its superior advantages from the view-point of—ideal factory sites—excellent water and rail transportation facilities—an ample supply of skilled labour—a dependable and economical source of power supply—proximity to raw materials and to the principal markets for the sale of manufactured products—will continue to grow and maintain its pre-eminent position as an industrial centre.

The development in the uses of electricity in the home, commercial establishment and factory for lighting, power and heating purposes, combined with the steady increase in population, constitute an important factor which will contribute largely to increase further the energy sales of the Tata Hydro System.

August, 1940

Why Indian Shipping Does Not Grow.

By WALCHAND HIRACHAND, Esq.

(Chairman, Scindia Steam Navigation Co., Ltd.)

Walchand Hirachand, Esq.

Walchand Hirachand, Chairman, The Premier Construction Co. Ltd., and The Scindia Steam Navigation Co. Ltd., Director, Oriental Government Security Life Assurance Co. Ltd., Associated Cement Companies Ltd., Okha Salt Works Ltd., Tata Chemicals Ltd., etc. b. at Sholapur, 1882. Educ : Sholapur, Poona and Bombay Undertook large contracts for construction of Railway lines, River bridges, Military barracks, Quetta Reconstruction Works for Military authorities etc., Municipal Water supply scheme of Bombay, Bhor Ghat Tunnel for the G.I.P. Railway, Victoria Terminus Remodelling, work for the G.I.P. Railway, Victoria Terminus Remodelling, Chola Power House and Bridge works for G.I.P. Railway, and other, large public buildings, etc. Interested in the Sugar Industry, running two Sugar Factories in Bombay Presidency ; is himself an agriculturist on a large scale ; also interested in Pipe Manufacturing Industry having 30 Factories operating all over India, Burma and Ceylon ; President, Indian Merchants' Chamber, Bombay, 1927 ; Maharashtra Chamber of Commerce 1927-38 ; Indian National Committee of the International Chamber of Commerce 1931-33 ; Federation of Indian Chambers of Commerce Industry 1932-33 ; All India Organisation of Industrial Employers 1933-34 ; Vice-President, International Chamber of Commerce, Paris, 1934 to date ; President, Indian National Shipowners' Association ; Ex-member

Governing Body of Imperial Agricultural Research Council of the Government of India for five years ; Employers' Delegate to the International Labour Conference at Geneva 1932 ; Leader of the Indian Delegation to Congress of International Chamber of Commerce, 1933, 1935, 1937 and 1939 Sessions at Vienna, Paris, Berlin and Copenhagen. Address : Construction House, Ballard Estate, Bombay. T. A. : Hincin Bombay. T. : 26037 (four lines) Office ; 41877—Residence. Clubs : Willingdon, Orient, Royal Western India Turf, Bombay ; Royal Calcutta Turf Club.

IN response to the request of Sheth Pranlal Devkaran, I record here, for his Year Book, a few facts and observations in connection with Indian shipping, the important key industry of India.

INDIA NEEDS A LARGE AND POWERFUL NATIONAL MERCHANT NAVY.

India has a coast line of about 4,500 miles. About seventy lacs of tons of rice, timber, coal, salt, oils and general cargo are carried annually in the coastal trade of India. As regards the carriage of passengers in that trade, over fifteen lacs of passengers are carried on the West Coast of India and about five lacs of passengers are carried between India and Burma. So far as the overseas trade is concerned, about two crores and fifty lacs of tons of cargo and about two lacs of passengers are carried every year in that trade. The annual value of the overseas import and export trade comes to about 400 crores of rupees. It is obvious that the carriage of such a huge trade requires a large mercantile marine to do so. Moreover India is surrounded by seas on three sides and therefore needs its own ships for the defence of its coasts. With a view, therefore, to promote and to strengthen the broad economic interests of India in the carriage of India's vast maritime trades and passengers and to provide for this country an efficient second line of defence, it is imperative that India should have a large and powerful mercantile marine of its own. The growing spirit of nationalism all round and the international situation in the world have recognised and emphasised the need and possession of such a merchant navy of its own by every important maritime country of the world.

BUT WHAT IS INDIAN SHIPPING ?

It is essential to understand what India means by Indian shipping. British shipping, which has dominated the coastal and the overseas trade of India for the benefit of Great Britain and at the sacrifice of India for decades past is not and cannot be called Indian shipping. The Government of India have said "Empire shipping includes Indian shipping." Let no one be deceived by that phrase. Indian shipping has no place in the maritime trade of the Empire and is not allowed to participate in that trade. The real test is whether Indian shipping retains the wealth in the country, develops its trades and industries, finds overseas markets for its products, gives employment to the sons of the soil, builds up for Indians an efficient sea-service, assists in the solution of the problems of its defence and meets all the needs of its own maritime activities. Indian shipping, therefore, in the largest interests of India, means shipping owned, controlled and managed by Indians themselves.

HAVE WE GOT SUCH INDIAN SHIPPING IN INDIA'S COASTAL AND OVERSEAS TRADES ?

Out of the large coastal trade of India—a trade which belongs to the national shipping of every maritime country as a matter of right—it is extremely disappointing to find that on an average of the last six years ending June 1939, Indian shipping companies carried only the meagre 21 to 22 per cent. of that trade. As regards the vast overseas trades, barring the recent venture of the Scindia Company in the Haj service, where it had to face the strangling rate war from the British shipping interests, Indian shipping companies have no share whatsoever either in the movement of cargo or in the carriage of passengers. Even today, the premier Indian Shipping Company—the Scindia—is practically debarred from participating in the overseas trades of India, while the other Indian shipping companies are even denied the birthright of every maritime country of moving freely in their own home waters.

TINY TONNAGE OF INDIA COMPARED AND CONTRASTED WITH THE DOMINATING TONNAGE OF BRITAIN.

It is sad to reflect that even in the year 1940 the total tonnage of all the Indian shipping companies is less than 135,000 tons gross. It is made up as follows :—

<i>Name of the Company.</i>	Tons Gross.	No. of Steamers.
The Scindia Steam Navigation Co., Ltd. - -	98,812	23
The Bombay Steam Navigation Co., Ltd. - -	13,299	15
The Bengal Burma Steam Navigation Co., Ltd. - -	5,209	3
The Indian Co-operative Navigation & Trading Co., Ltd. - - - -	1,605	6
The Ratnagar Steam Navigation Co., Ltd. - -	590	1
The Eastern Steam Navigation Co., Ltd. - -	2,144	2
The Malabar Steam Navigation Co., Ltd. - -	1,633	3
The Merchant Steam Navigation Co. - -	4,474	4
Cowasjee Dinshaw Bros. - - - -	3,672	5
The Hindustan Steam Navigation Co., Ltd. - -	310	1
	<hr/> 131,748 <hr/>	<hr/> 63 <hr/>

While India possesses tonnage of less than 132,000 tons gross, the tonnage of England exceeds 17,891,000 tons gross. Further, according to the statement laid on the table of the Central Legislature on the 31st August 1938, the proportion of the Indian and the British shipping in the coastal trade of India was 21 per cent. for the Indian and 79 per cent. for the British. The statement further added that 2,756,400 tons of British shipping was engaged in the foreign sea-borne trade of India—a trade in which

we all of us know Indian shipping practically is not allowed to participate. What a painful contrast does this provide between Indian and England! It is recognised all over the world that the tonnage of a maritime country must at least be in the proportion to the volume of its maritime trades. This imperative need of a country is completely ignored in India. According to the latest figures published by the Fact Finding Committee of the Chamber of Shipping, while the maritime trade of England was 1,354 million pounds that of India was 241 million pounds. It, therefore, follows that while the trade of England is about $5\frac{1}{2}$ times as large as that of India, the tonnage of England is over 135 times the tonnage of India. Is there any Indian who will not feel bitterly the sense of humiliation and sorrow when he realises the true significance of the above figures and the intensity of the economic dependence—if not bondage—of India on England which they reveal. This is the position of Indian shipping in India at present. This is how the so-called Empire maritime policy has worked in action. Let us examine the causes which have brought about this deplorable situation.

WHY HAS NOT INDIAN SHIPPING GROWN ?

IS IT BECAUSE INDIANS LACK THE SPIRIT OF ENTERPRISE ?

Indian Chamber of Commerce in Great Britain has estimated that about 102 navigation companies with a total nominal capital of about 46 crores of rupees were registered in India from 1860 to 1925 as Limited Liability Companies. A large number of them was, however, driven out of business as a result of the hostility of the British shipping interests. That Chamber estimates that the actual Capital lost in 20 Companies comes to about 8 crores of rupees. I also find that the list of shipping companies that were compelled to go into liquidation from September 1904 to July 1927 comes to 24. It will thus be realised that it is not the lack of the spirit of enterprise amongst Indians which has retarded the progress of Indian shipping in India's maritime trades.

IT IS THE BRITISH SHIPPING INTERESTS WHO HAVE PREVENTED THE GROWTH OF INDIAN SHIPPING.

It is the drastic unfair rate wars carried on by the British shipping interests which are responsible for preventing Indian shipping from living and growing even in its own home waters. It may be useful to recall here the observations which the Hon'ble Mr. V. G. Lynn, Chairman, Chamber of Commerce, Madras, submitted to the Royal Commission on Shipping Rings. Commenting on the virtual monopoly preserved by the British shipping interests in respect of Indian coastal trade he remarked :

“ From time to time efforts have been made by independent lines to participate in the Indo-inter-coastal, Indo-Ceylon and Indo-Burman trades, but the active competition of the B. I. S. N. Co. and the tacit support of the Asiatic Company has invariably resulted in the opposing steamers and lines being withdrawn after a short time. The latest instance in this Presidency is the case of a Line called “ The Shah Line ” whose managing agents could doubtless afford valuable information as to the tactics adopted to drive them out of the business.”

I may here further refer to a yet more definite and specific charge made against the British shipping interests by Sir Alfred Watson in his evidence before the Joint Select Committee. He said :

“I recognise that Indian Company after Indian Company which endeavoured to develop a coastal service has been financially shattered by the heavy combination of the British interests.”

This is not the place to multiply these charges. Suffice it to say, that the main reason why Indian shipping has not made any headway even in its own home waters is the pronounced, calculated and well directed hostility of the British shipping interests whom the Government of India alas! have done their best even at the sacrifice of Indians to patronise in every possible way that was open to them.

AND WHAT ABOUT THE GOVERNMENT OF INDIA?

HAVE THEY HELPED INDIAN SHIPPING?

And it may be pertinent to inquire that if the Indian shipping ventures were driven out of existence by the British shipping interests, did not the Government of India go to their help? It is hardly possible to write with restraint on the treatment which Indian shipping has received from its own Government. British shipping interests have often claimed that they have built up the Indian trade at considerable sacrifice. It is, however, well-known how Mackinnon obtained at the breakfast table a subsidy from Sir Bartle Frere, the then Governor of Bombay, in 1863 and turned the Burma Steam Navigation Co., Ltd., into the British India Company of today. Not only did the B. I. not undergo any sacrifices but it minted tons of money by its virtual monopoly of the coastal trade of India. During the period of 12 years from 1902 to 1914—mind you not the period of the war—it made an average profit of 33 per cent. per annum without providing for depreciation on the ordinary capital invested in the Company and it was also immune until quite recently even from the payment of the Indian Income-tax. The Indian shipping would have been prepared to build up the trade without the immunity from Income-tax and even at the sacrifice of making only 10 per cent. and not the 33 per cent. like the British India on its invested capital. Moreover, it was almost a scandal when the presence of Lord Inchcape as the Chairman of the Retrenchment Committee in India secured for his Company, the British India, a contract for the carriage of coal to Burma for a long period of 10 years on very favourable terms—which the Government of India refused to disclose—without even giving an opportunity to an Indian Company to put in their tender despite the assurances given by the Government for giving that Company an opportunity to tender. I need not mention the large sums of money which have been paid to the British shipping companies under the Mail Contracts and the exclusive privilege given to them for carrying practically the entire requirements of Government stores and other materials on the coast. Under the guise of helping the 'so-called 'Empire Shipping,' which meant in practice British Shipping only, the Civil and Military Officers enjoying the benefit of Lee passage were practically compelled to travel by the ships of the British Lines. And even today when they want to appoint a Controller of Indian Shipping, who is expected to look after the interests of ships owned, controlled and managed by Indians, the Government of India cannot find a responsible Indian to fulfil that Office but have appointed a Britisher who in his lifetime has done everything possible to stifle the growth and development of Indian shipping in this country. This pronounced partiality—I was going to say favouritism—towards British shipping interests is an eloquent testimony and irrefutable proof of the neglect, if not hostility, on the part of the Government of India towards the National shipping interests in this country.

AND HAS INDIA EVEN ANY PLACE IN THE EMPIRE MARITIME POLICY?

We have been hearing for the last few years the necessity of evolving a common Empire maritime policy so that the supremacy of the British Commonwealth of Nations at sea may be ensured in the interests of all concerned. If the Empire is really anxious to develop its maritime strength and regain its maritime supremacy, it will have to base its maritime policy on the fundamental principle that all the component parts of the Empire should be considered "as real Imperial maritime units for the purpose of their national economy and their common defence" and should be treated as such in actual practice. But how does British shipping treat Indian shipping which is shipping of a part of the Empire? Some years back the great House of Tatas started a line of steamers between India and Japan. It did so in order to regain the trade built up

in Indian cotton yarn between India and China which had almost been lost to India owing to the rates policy adopted by the non-national shipping interests. The P. & O., it is well-known, carried on a drastic rate war against the shipping service started by the House of Tatas and brought down its rate from Rs. 17 to Rs. 1-8 per ton with the result that the Tata Line had to go out of the field and this national enterprise to build up a service in the overseas trade was nipped in the bud. This suicidal policy on the part of England, a part of the Empire, in killing the ventures in the field of shipping by India, another part of the Empire, is not only the negation of the spirit which calls forth for common efforts for the adoption of Empire maritime policy but is also in singular contrast with the policy of mutual help and support on the part of the Japanese Lines. Not only did the Nippon Yusen Kaisha not drive away the Osaka Shosen Kaisha from the trade between India and Japan in which it was plying but even when the powerful P. & O. Co. demanded the withdrawal of the Osaka Shosen Kaisha from those waters, the Nippon Yusen Kaisha not only did not respond to it but stood shoulder to shoulder with the Osaka Shosen Kaisha and made the mighty P. & O. bend to the will and dictates of the Japanese shipping lines. While the Japanese thus stands by and does all he can to help his brother in his onward march, the British shipping interests not only knock down the Indian shipping venture but do all they can to see that it ceases to exist. It is this selfish insular outlook devoid of any vision for the solidarity of the Empire on the part of British shipping which is responsible for enabling the Japanese shipping lines, as remarked by the Imperial Shipping Committee not only to present "a common front to the British interest at each readjustment of the Conference agreement" but also to secure for them the most dominant position in the Indo-Japanese trade.

Take another illustration. Under the Trade Facilities Act, Great Britain helped its own Shipping to the tune of about 20 million pounds. Assistance to the extent of nearly 2 million pounds was given by England under this Act even to the foreign countries to build their ships. But what England is prepared to do and has done for foreign shipping lines, it was not prepared and is not prepared to do for India and Indian shipping. When the Indian shipping company asked for help under this Act, it was told that no funds were available. This is how the Empire maritime policy works in action so far as this important part of the Empire is concerned.

Moreover, during the recent trade negotiations for an agreement between India and Japan British shipping interests and particularly the P. & O. Company urged upon the Government of India that they should secure preference for British shipping in those negotiations for the carriage of trade which emanated from or was brought to India and expressed their great surprise when it was found that their orders were not carried out because "the British Empire ships in question" which would have to carry that trade, in the derisive phrase of Mr. Alexander Shaw, the then Chairman of the P. & O., "were not actually owned by native born Indians." It will be recognised that there can be no partnership between the different units of the British Commonwealth when British shipping wants to crush national Indian enterprise and to prevent its growth in every possible way. If the Empire maritime policy has really to achieve the object which it has in view, the British shipping interests will have to change their present hostile attitude into a friendly one and will have to show by their conduct that the considered advice embodied in the observations of the Imperial Shipping Committee, *viz*:—

"the aspirations of India to enter into the field of shipping operations are natural and should be fairly met in a co-operative spirit by the United Kingdom Lines,"

has really touched their heart and that they will shape their policy and conduct towards Indian national shipping in the future in accordance with it. These are some of the powerful currents of hostility which have prevented the growth of Indian shipping and

Indian shipping has struggled all these years and is struggling even now against them for its very existence. The tragic history of these heroic struggles will, I am sure, not fail to provoke the strongest resentment in the heart of the mildest Indian or avoid the painful reflection that the Government of India and their Indian Commerce Member, despite their promises and assurances for help, were looking upon these struggles with a philosophic resignation which no doubt gave additional strength to the exploiters of India.

SHIPPING IS A NATIONAL ASSET AND STATE AID IS A NATIONAL RESPONSIBILITY.

What can we then do to develop our Indian Merchant Navy? Let us see what other countries have done in this direction. Shipping has been considered as a national asset by all the important maritime countries of the world. It has been considered as an important instrument of national economic policy. The present international situation has brought home to us more vividly than before that national shipping is a second—but the most important and effective line of national defence. In view of this supreme importance of shipping to a country both in times of peace as well as in times of war national Governments have recognised State aid to shipping as their national responsibility. Whether it is in Japan or in Italy, whether it is in Germany or in America, wherever we turn our eyes, we find the shipping of the country receiving warmest support and efficient and effective aid from the Government of the land. India is the only unfortunate country where the Government of the land have failed and fail to realise that shipping is a national asset of India. India alone amongst the important maritime nations of the world has also the signal misfortune of having an alien Government which have systematically ignored their recognised responsibility of enunciating a policy of State aid to shipping and have not moved their little finger to help their national shipping in any way whatsoever. The supreme need of the hour, therefore, is to make the Government of India realise that national shipping is the national asset of India.

We are told that England does not believe in State aid to shipping. She is anxious to break down the barriers of world trade and wants to preserve the freedom of the seas. What a noble and selfless ideal if it were sincerely inspired, if it were true to life and if it were practical in a world where enlightened self-interest and not the pursuit of altruistic phantoms govern the actions of humanity. What is, however, the real position so far as even England is concerned? In theory England opposes State aid to shipping. In practice England demands financial assistance for British shipping. It is said that British shipping is loud in its demand for financial help from its Government because it has to face competition from subsidised foreign shipping. Let me grant for a moment that that is the real motive which underlies the demand. But what about India? Has not Indian shipping to face unfair rate wars from British shipping which is demanding at Home state aid against rate wars from its Government for its protection. When the Scindia started its life in the coastal trade, the B. I., a powerful British shipping company, brought down the rate from Rs. 18 to Rs. 6 per ton. When the Bengal Burma began its passenger service, the same powerful B. I. brought down the passage fare from Rs. 16 to Rs. 4. Again Indian shipping suffered from the rate war in 1934 when the rate of freight was brought down to 8 annas per ton. Only a couple of years ago when the Scindia Company started, in response to the Muslim public and the pilgrims, its service between India and Jedda, the same British interest brought down the rate from Rs. 175 to Rs. 20 per head, which meant in practice a gift to Rs. 27 to every pilgrim who performed his Haj. Where is the wrong if Indian shipping were to demand the protection of its Government and ask for financial help from that Government against this unfair competition from

the Britishers just as these very Britishers have been demanding such financial assistance from their own Government in the United Kingdom against the competition of the foreign lines? When, however, the Britishers demand help from their own Government, not only are they assured of such help and not only is such help given to them but their Government also warn those aggressive countries which carry on competition against British shipping that they will hit them and hit them hard until the supremacy of British shipping is assured at sea. When one contrasts this policy of the British Government of giving their national shipping active protection and effective help so that British shipping can maintain its supremacy on the oceans with the policy of utter indifference, if not inspired hostility, on the part of the Government of India, we cannot help feeling that unless we have our own national Government in the country, there would be or could be no future for the Indian shipping industry in this land. And yet one cannot help admiring the heroic struggles which Indian shipping has put forth and has been putting forth to live and grow facing all these ordeals and struggles thrown in its path by the British shipping interests which cannot always hide successfully their wicked delight at the thought that they successfully used their power within an influence on the Government of India in preventing that Government from helping national shippings against the strangling competition offered by themselves. Well may the quietest spirit in the land exclaim in utter helplessness that what is welcomed in England as justice is condemned as treason in India.

BRITAIN'S HELP TO BRITISH SHIPPING : WILL INDIAN GOVERNMENT HELP INDIAN SHIPPING ?

The undermentioned particulars will give a vivid idea of the extent of the enormous financial help which after the end of the last war Britain has been giving to British shipping :—

	£	s.
1. Loans under the Trade Facilities Act (1921/22) -	23,432,480	0
(Of this over £2,000,000 were for ships for foreigners built in England).		
2. Subsidy to Cunard Steamship Co. 1924 to 1928 -	333,698	0
3. Help under the Cunard Insurance Agreement Act (1930)		
Out of the amount of £4,800,000 for which the 'Queen Mary' was insured, the risk accepted by the Board of Trade was		
for the year ending May 12th 1938 - - -	1,630,000	0
for the year ending May 12th 1939 - - -	1,584,000	0
for the year ending May 12th 1940 - - -	1,899,150	0

Without the help of the Board of Trade, the vessel could not have been insured. Although the Cunard Insurance Fund totalled nearly £100,000 in 1939 and although that constituted very little security in itself for a possible total loss of nearly £2,000,000, it is to be remembered that "the whole resources of the Nation are behind the Fund itself."

4. Help under the North Atlantic Shipping Act (1934).

£ s.

The Board of Trade is authorised to advance under this Act upto - - - - - -	9,500,000	0
-----------------------------------------------------------------------------------------------------------------	-----------	---

Assistance given is 1938 and 1939 to Cunard White Star Ltd. under this Act amounted to £3,102,455.

Interest at $1\frac{1}{2}$ per cent.

Loans not due for repayment until the end of 1975 when the vessel will be 40 years of age, although its normal life cannot be more than 20 years.

Moreover, the vessel and the depreciation on the vessel are the only securities against loan.

5. British Shipping Assistance Act (1935) and British Shipping Continuance of Subsidy Act (1936)

Subsidies granted to Tramp shipping - - -	4,002,183	0
-------------------------------------------------------------	-----------	---

6. Help under Scrap and Build Scheme under Part II British Shipping Assistance Act (1935) :

(a) Loan sanctioned up to - - - -	10,000,000	0
-----------------------------------------------------------	------------	---

(b) Loans outstanding on March 31st 1939 - -	2,306,933	19
----------------------------------------------------------	-----------	----

7. British Shipping Assistance Bill (1939) :

Financial assistance to be granted under this Bill has been suspended owing to the outbreak of the war. Provisions for the financial assistance are as under which have been accepted by the Parliament.

(A) Tramp Shipping Subsidy for a period of five years at the rate of £2,750,000 per year -	13,750,000	0
---------------------------------------------------------------------------------------------------------	------------	---

(B) Shipbuilding Loans :

(i) Loans to be granted for the building of tramp and cargo vessels - - -	10,000,000	0
---------------------------------------------------------------------------------------------	------------	---

(ii) Loans actually given up to July 1940 for building new vessels - - -	4,800,000	0
--------------------------------------------------------------------------------------------	-----------	---

(C) Subsidies for building ships to be granted for a period of five years at the rate of £500,000	2,500,000	0
Subsidies actually granted upto July 1940 -	320,000	0

(D) Assistance for Liner shipping to protect that shipping against subsidised foreign shipping -	10,000,000	0
--------------------------------------------------------------------------------------------------------	------------	---

(E) Merchant Shipping Reserve :

The Board of Trade to purchase vessels registered in the United Kingdom for the purpose of creating a reserve for an emergency -	2,000,000	0
----------------------------------------------------------------------------------------------------------------------------------------	-----------	---

In addition to the financial assistance outlined above, it was announced in the House of Commons by the President of the Board of Trade that "the Government will continue to take all possible steps to promote the interests of British shipping in connection with trade negotiations and other discussions with foreign Governments."

In a memorandum issued on the 6th August 1940 in London, it was announced by the British Government that "the progress of legislation was interrupted by the outbreak of the war but the necessity of maintaining the British mercantile marine in adequate strength (mark the words) and in a position of full competitive efficiency (mark the words) is recognised no less strongly by the Government today. They will, therefore, keep this question constantly in mind as one which will be necessary to ask Parliament to deal with in due course."

Which Britisher will not feel proud of his Government which thus wants to maintain the supremacy of British shipping at sea by giving it such enormous help and which British Shipowner will not feel it his duty to help his Government in every way during the times of war when he knows that when peace returns not only will he receive help in every way but that England will maintain British shipping in "adequate strength" and in "full competitive efficiency" so that its supremacy on the seas may continue to be ensured. Is there anything for an Indian to be proud of any deeds either of omission or commission of the Government which rules him? Heroic as is the story of the struggle of Indian shipping and helpless as has been its continuous cry all these years for help and assistance by the Government of the land, will it be too much to expect even in the year 1940, when the war has made even those who are in the seats of authority feel and recognise the imperative need of national shipping for preserving the channels of India's economic life and maintaining its line of defence that at least India's Indian Commerce Member will look upon the struggles of Indian shipping with greater sympathy and reflecting over what Britain has done and is doing for British shipping, will take prompt and effective measures for getting Indian shipping recognised by his colleagues in the Government as a national asset of India and inspire them to give that shipping all the support, encouragement and help that it needs so that India may soon have a merchant marine worthy of its position as a great maritime country participating in India's coastal and overseas trade in times of peace and lending its powerful support as the second line of defence in times of war. I hope India will not appeal to its own Commerce Member in vain in helping India in its onward economic and industrial march but will continue to live in the hope that he at any rate will rise to the occasion, recognise his responsibility and do his duty so that Indian shipping can revive its glories of the past and continue to prosper for the benefit of all concerned in this ancient land.

August 1940.

Insurance in India.

By J. C. SETALVAD, Esq.

(*Chairman, Indian Insurance Companies' Association.*)

Jivanlal C. Setalvad, Esq.

Mr. J. C. Setalvad is a prominent businessman and is associated with the management of the Vulcan Insurance Co., Ltd. and the Industrial and Prudential Assurance Co., Ltd., Bombay. He was the President of the Indian Merchants' Chamber in 1939 and has been the Chairman of the Indian Insurance Companies' Association for a number of years. He was a member of the Advisory Committee on the Insurance Bill appointed by the Government of India in 1936. He is also on the executive committee of the Federation of Indian Chambers of Commerce and Industry, Delhi.

LIKE many other industries which at one time flourished in India, insurance business not only flourished and prospered in this country but the whole origin has been in India. Manu in some of his Laws mentions a charge on goods carried from one place to another to see that they were carried safely and handed over to the consignee. The following quotation taken from an English Author speaks for itself:

" If we want a remote example nearer akin to a modern conception of the meaning of the word, we can turn to India where it is recorded in the Institutes of Manu which were compiled sometime before the Christian Era that ' in estimating the tax to be levied on the trader some consideration should be given to a well-known charge in the transit of goods for securing the goods carried'."

A line, therefore, which had its beginning in our country thousands of years ago and which really was developed to a remarkable extent even in those primitive times, to-day finds itself not only neglected but positively ignored by the people of our own country.

LIFE INSURANCE.

Life insurance in India had a comparatively late start but the last few years have witnessed a considerable expansion in Insurance business, this development being on par with progress achieved on other sides of national welfare.

In somewhat striking contrast to the countries of the occident, it was only in the third and last quarter of the last century that Life Insurance business was done to any appreciable extent in India and most of it was in the hands of British and foreign companies. It is clear, therefore, that about 70 years ago there were no Insurance companies of any standing even for the transaction of life business. So far as other lines of Insurance were concerned, the entire benefit used to go to non-Indian companies as there were no Indian companies in existence. Since the year 1870, however, life insurance companies began to appear one after another with the result that to-day, India can claim to have as many as 200 companies registered for the transaction of purely life insurance. Some of these companies have attained remarkable progress and are already in the front rank to-day. The expansion of business of Indian Insurance Companies during the last few years is, undoubtedly, the result of the " national " consciousness that is being developed all over India. For the same reason a substantial portion of the life insurance business, which had been mainly done by British and foreign

companies, has now passed to Indian companies, who in the last few years have had a flourishing record in this Branch. During this period their new business has more than trebled from Rs. 8 crores in 1925 to Rs. 42 crores in 1937, while total business has recorded the magnificent increase from Rs. 47 crores to Rs. 197 crores. The total premium income is Rs. 12 crores. The corresponding figures for the total Indian business of foreign companies are Rs. 80 crores and Rs. 2½ crores respectively. In 1937 the total assets of Indian companies stood at Rs. 56 crores.

To have an exact idea of how far Indian Insurance Companies lag behind the rest of the world, it is necessary to remember that the total income of British life offices amounts to Rs. 157 crores and their total funds exceed Rs. 1,472 crores. These figures are a formidable lesson in humility and serve to indicate a leeway that has yet to be made in Indian insurance. The *per capita* insurance of Indian public is also very low. For the population of 33 crores the total amount of life insurance in force with Indian life companies is less than even 200 crores of rupees. Therefore, the amount of insurance per head is less than rupees seven as against Rs. 3,000 per head in America, Rs. 1,800 in Canada, Rs. 800 in Australia, Rs. 700 in England and Rs. 600 in Japan.

The amount of life insurance in force indicates the saving capacity of the people and incidentally, prosperity of the country. It is only in India that even the benefits of a life insurance policy and the great service that life insurance companies are rendering to the people at large have not been appreciated. This clearly indicates the backwardness of the people economically as well as financially. The illiteracy of the people also is one of the contributing factors. But, there is no doubt that attention is slowly beginning to be paid by the literate classes in this direction and with the growth of national sentiment and the spirit of patriotism becoming more visible, life insurance is bound to be concentrated more and more in the hands of Indian Insurance Companies in the same manner as several countries have accomplished.

GENERAL INSURANCE.

We now turn our attention to classes of insurance other than life or, as it is often called "General" insurance. It may be stated that Indian companies two decades ago, were conspicuous by their absence. In spite of the fact that large trade had been going on between India and various outside countries, and in spite of the fact that some industries such as cotton mills, etc., were started by the Indian people, there never was any thought given to this great handmaiden of commerce. It was left to the post-war period to bring into being several types of industrial enterprise and commercial insurance was one of them.

The post-war boom was an opportunity for Indian companies to undertake insurance other than life and Bombay businessmen, quick off the mark as usual, took advantage of it to set up companies to transact general insurance business. Most of the companies started in those years had strong, influential and capable Boards of Directors composed as they were of some of the leading Millowners and Merchants of Bombay. The number of Indian companies doing general insurance business is 15 as against 150 foreign insurance companies. The premium income of insurance companies in India doing business other than life during the year 1937 was Rs. 2 crores 98 lakhs out of which Indian companies got only Rs. 96 lakhs and non-Indian companies got Rs. 202 lakhs.

This is due to competition of non-Indian insurers in this field.

The progress in fire and general insurance business by indigenous companies does not present so gratifying a record as that shown in life insurance business. Out of about 15 Indian companies doing fire and general insurance business, none have achieved what may be considered outstanding progress. In life insurance the appeal to the investing public is mainly the security, stability and service offered by the company. In general insurance business it is more a question of connections and influence. Thus it comes about that while intrinsic considerations are responsible for the growth

of business in cases of life companies, extraneous considerations are responsible for the growth of business in case of general insurance companies. If a firm of managing agents represents a particular company, the insurance business of that company automatically goes to the insurance company which that firm represents.

Of the business which is in the hands of Indian managing agents, a considerable portion goes to British companies because the managing agents happen to represent British insurance companies. Accordingly, the scope for business in the case of Indian Insurance Companies is circumscribed.

It will thus be seen that there is no dearth of business, but the amount available to Indian companies is very limited. Indian enterprise, therefore, cannot expand to its possible limits, nor rise to its legitimate status in the field of indispensable service to the community not only because of the established connections and vested interests of foreign enterprise in the same field in this country but also because of unfair advantage and cut-throat competition which existed till very recently. Everywhere in the modern civilised world, insurance business being recognised as one of the most valuable and indispensable accessories to the smooth and progressive prosecution of national economy, is strictly regulated and generally reserved to the natives of the soil. In this country, however, it is a foreigner who has the special advantage, and the indigenous enterprise which is specially handicapped.

The other matter which handicaps the progress of Indian insurance companies is the relation between the banks and insurance companies. In all countries of the world, insurance and banking work hand in hand ; and they are the greatest supporters of each other. The position in India is however different. In the beginning the Indian companies got little or no encouragement from Exchange Banks. After a time, the position got a little better but again Indian insurance companies are suffering from great disabilities at the hands of certain banks. It is very difficult to understand this attitude of banks. The banks are doing business in India and it is but fair that at least an adequate share of insurance business should go to Indian companies. During the last 20 years there have been many occasions in which very large claims were made upon Indian insurance companies, and they have all met their engagement promptly and in a business-like manner. The whole history and record of Indian insurance companies go to show that they are rendering to the insuring public the same service as they have been accustomed to before, from foreign companies.

The other matter which deserves special attention is that buyers of cotton and wheat, etc., at London and Liverpool stipulate in their letters of credit that insurance will be with an A1 British company with the result that Exchange Banks in India accept the document only if the relative goods are covered by a British insurance company. Consequently a good deal of insurance business which would otherwise be placed with Indian insurance companies by the shippers at this end has thus compulsarily to be passed on to non-Indian Insurance companies. Similar difficulties are also experienced by Indian companies under the terms of contract of the London and Liverpool Cattle Food Trade Associations. This kind of restriction was in vogue in respect of Colonial insurance companies also, about five years back, but on the Colonies having taken up this matter through diplomatic channels it was removed.

The stipulation referred to above is not only a slight at the Indian business community, but also diverts legitimate business from Indian to non-Indian companies. Such matters should be taken up by the Government of India with the British authorities and secure equal treatment for the Indian insurance companies as are enjoyed by British and Colonial companies.

When the Government of India passed the Insurance Act 1938, it was suggested to incorporate certain provisions with a view to give tangible help and assistance to

Indian companies. But most of the suggestions of protection were considered either *ultra vires* under the Government of India Act 1935 or they would be inoperative as regards competition from British companies.

It is necessary to emphasise that the State must give direct as well as indirect assistance to its industries if it is proved that these industries are essential and can develop under suitable conditions. Once the stage of growth has passed, direct assistance may be withdrawn but even at this stage and after, indirect assistance cannot be absolutely ceased because State assistance is the very life-blood of modern industrial organisation.

The feeling for making insurance a national industry is very prominent everywhere. In Japan this feeling has itself manifested fully. In that country there are about 50 Japanese companies in the non-life insurance field. Besides these Japanese companies there are about 30 foreign companies licensed to operate throughout branches or agencies, but the volume of business transacted by those foreign companies is only about 5 per cent. of the Japanese non-life business. Thus this policy has already contributed to the development of productive enterprise in Japan. Japanese insurance companies perform the functions of supplying funds to business enterprises and their position in industrial finance has become co-relative with that of Banks playing an important part in contributing to the growth of nation building in the realm of industries of their country.

To achieve this, all industries, which are financed and managed by Indians should insure with Indian companies. Bombay mills, with few exceptions belong to Indians and are practically financed and controlled by our own people. The cotton trade is largely in our hands and most of other trades are controlled by us. All Associations representing the Commerce and Industry of this country should take a lead in this matter and it is certain that their action will not only have the desired effect but will also go a long way in the direction of encouraging Indian Insurance companies.

Industries which receive direct bounties or protection by Tariff duties, should as a matter of policy be made to place all their Insurance business with Indian companies. The mill industry of India is always claimed as a national and key industry in this country. Still there are a large number of mills which are not insured with indigenous companies. If the owners of mills claim their industry as a national industry and on the strength of this they have obtained protection from the tax-payers of India, the latter have a right to expect the millowners to support as equally important national activity, by placing their insurance with Indian companies. Besides the Textile industry, there are industries like iron and steel, match industry, paper industry, sugar industry which receive protection from Government and as such should be compelled to put their insurance with insurance companies of their own nationals. If only the Indian business section of the community will make it a point to support Indian insurance companies whenever they have insurance to be placed and thereby helping to conserve all the insurance premium in the country itself, there can be no doubt that within a few years the existing Indian insurance companies will not only become a greater power but they will become assets in the economic structure of the country.

May, 1940

Indian Sugar Industry

By LALCHAND HIRACHAND, Esq., B.A.

(*Chairman, Rawalgaon Sugar Farm, Ltd.*)

Lalchand Hirachand, Esq.

Passed B.A. in 1926 ; travelled for two years in Europe ; in 1936 attended the 5th Session of the International Sugar Technologists Conference held at Brisbane, Australia ; in 1937 elected Member of the Bombay Legislative Assembly from East Nasik ; in 1937, he was a Director of the Indian Sugar Syndicate ; since 1938 a Member of the Executive Committee of the India Sugar Mills' Association ; Chairman of the Ravalgaon Sugar Farm Ltd., Director, Marsland Price & Co. Ltd., and the Indian Hume Pipe Co., Ltd.

IT is now definitely established that the manufacture of sugar originated in India.

The credit of evolving sugar-cane (Ikshu Danda) goes to that botanist Sage, Vishwamitra of Ramayan fame. Since then, this industry has passed through various phases. At one time, India was the chief producer of sugar and not only did she meet her own requirements to the fullest extent, but exported a very large quantity to foreign countries. Later, however, unfortunately due to various causes, the industry had to pass through a crisis and the production deteriorated considerably ;

so much so, that instead of being an exporter, this country imported nearly 80 per cent. of its requirements from abroad. In 1931-32, the production of sugar from cane was hardly 160,000 tons as against a total consumption of 1,100,000 tons.

From 1931 onwards, the industry took a definite turn as a result of the protection which was given to it. The production began to increase rapidly and whilst in 1931 there were hardly 40 factories with much smaller units, in 1939 the number had gone up to 150 and each with a much large productive capacity, the production estimated being 1,300,000 tons in 1939-40. All imports had practically stopped except a few thousand tons of refined sugar for the satisfaction of foreigners and faddists. Even the sugar-cane crop had more than doubled itself in this period. India to-day has the largest acreage under sugar-cane.

Unlike other industries, the sugar industry is unique in character, it being essentially a rural industry. The factories have developed in agricultural areas where sugar-cane is cultivated on a large scale. It has helped to stop the flow of the population from villages to towns and cities. On the other hand, it has taken capital from cities to villages. It is estimated that nearly Rs. 40 crores are invested in this industry. The labour directly employed has approached the figure of 200,000, but more important than that is the fact that the industry has given considerable secondary employment to the agricultural population in various forms and particularly at such periods when the agriculturists are generally without any occupation. Due to the considerable use of oilcakes for the manuring of the land under sugar-cane, this industry has given a fillip to the oil seed crushing industry. It has taken men like engineers, chemists and educated agriculturists from towns to the villages, and brought about a happy contact between the rural and the urban population. As a result of this development, those rural areas have been considerably benefited in many ways, such as, education, medical service, mechanical and technical knowledge, better housing, better living and a broader outlook.

In spite of the Tariff Board's recommendation in 1931 for the grant of protection for a period of 15 years, the Government have imposed increasing taxes on this industry.

In 1939-40, the Central authorities estimated an income of Rs. 5,40,00,000 in the form of Excise Duty, whilst additionally, the income-tax from the industry is expected to amount to a handsome figure of Rs. 50,00,000. Besides this, the Provincial Governments, expect an income of Rs. 75,00,000 in the form of cane cess, etc. There is hardly any other industry in this country which is subjected to such a heavy taxation.

A word here regarding the sugar industry in the Province of Bombay would not be out of place. The production of sugar in the Province, including the neighbouring States, is comparatively small amounting to about 7 per cent. of the total production. It is remarkable that this should be so small when the consumption is almost double. The Province falls within the tropical zone and is well suited for sugar-cane cultivation. The factories here are growing some of the best varieties of sugar-cane, *viz.*, P.O.J. 2878, E.K. 28, C.O. 419, etc., which are not only giving a very good tonnage per acre, but are also considered rich in sugar contents. Almost all the factories have their own plantations for the supply of cane, which results in an excellent quality being grown with a properly regulated supply. In consequence, they get a higher recovery of sugar by more than one per cent. as compared with that in other provinces. The cultivation of cane, however, also has its disadvantages. A plantation means so much more capital outlay and has its attendant agricultural risks of damage to crops by frost, diseases, pests, etc. It is, however, generally acknowledged that it is more scientific and more practical in the long run for the factory to have its own plantation if it has to meet outside competition successfully. And, for this reason, the factories in the Province of Bombay can be said to have started and developed on economic lines. The one limiting factor restricting the development of the industry locally, however, is the lack of an abundant supply of water without which the cane crop cannot be grown. The factories have, therefore, to arrange their capacity to such supply of water from the irrigation canals and naturally, they are restricted in the Deccan Canal Zone. Though the quality of cane grown in this area is much superior to that compared to the cane grown in North India, the cost is much more, owing to the high rate of water, high wages paid to labour and the heavy manuring that is required to be done to get a good crop. Adjusting these advantages and disadvantages, however, one can safely say that the factories in the Province of Bombay have established themselves on a more scientific and economic basis and are expected to stand competition in a much better way in the long run.

Owing to the failure of the crop due to floods, diseases and pests in North India, there was much less production of sugar and about three lakh tons had to be imported from Java during the year 1939. As a result prices soared up high. To make matters worse, war broke out in the beginning of September 1939 and everybody had become crazy for sugar. Every day and every hour, the price of Java sugar was being raised, while the North India sugar was scarcely available, as the factories and the sugar merchants were withholding stocks in the hope of making better profits in consequence of the war. This serious situation was partially relieved by the very commendable action of the Bombay factories in starting crushing operations as early as September in spite of lower recoveries of sugar. Moreover, taking a long view of things, they kept prices at a reasonable level, which was considerably lower than the Java parity or the North India Parity. They are now in a very prosperous condition and I hope they will continue to be so in view of their sound position.

Before I conclude, I would like to say one thing. The consumption of sugar in this country is very small. Taking sugar and gur together, the annual consumption *per capita* does not exceed 30 lbs., while, of that sugar alone is hardly 7 lbs. per head. In other countries like the U.S.A., England and Australia, the consumption of sugar exceeds 100 lbs. per head. With the improvement in the standard of living in this country, this rate is expected to go up, and the demand for sugar should, therefore, increase accordingly, giving thereby more scope for the expansion of the industry and leading the country to prosperity. Let our watchword be : "He is a patriot who eats more sugar."

Thoughts on The Film Industry.

Elected Member, Legislative Assembly, 1931, Non-official visitor to Prisons since 1922 ; Member, Advisory Board, Indian Jails Committee, since 1924 ; President, Indian Merchants' Chamber, 1936 ; Life Member, Indian Red Cross Society, 1921 ; Member of Committee, Bombay Branch, since 1921 and its President in 1931, Non-Official Adviser to the Government of India in connection with the Indo-Japanese Trade Negotiations ; Member, Stock Exchange Enquiry Committee, 1936-37 ; Director of several Joint Stock Companies ; connected with several benevolent and philanthropic institutions in the City. *Address* : Meher Buildings, Chowpatty, Bombay 7. *T. A. Friendship*, Bombay. *T.* (Residence) 41740, (Office) 27224.

THE film industry is perhaps the youngest of the major industries of the world. It owes its origin to the painstaking research carried on by a number of pioneers since the year 1825. Though it is consequently difficult to point out the name of every distinguished individual as the inventor of the cinema, the greatest amount of credit for the invention of the motion picture camera and projector must, on the authority of the Supreme Court of America, be ascribed to the genius of Friesse Greene who patented the same in Great Britain on the 21st June 1889. Yet the credit for the first public show and for making the moving picture an accomplished fact capable of immeasurable commercial possibilities goes jointly to Friesse Greene and Robert W. Paul, the latter of whom was the inventor of a projector called the Animatograph which was then far superior to Friesse Greene's projector and held the field until Edison's Kinetoscope was perfected and patented in America about the year 1893. Commencing as a novelty, inasmuch as pictures moved for the first time, the movie began soon to entertain. The films used did not perhaps exceed 100 feet in length while the subjects thereof were no more dignified than feats of which rapid action was the predominant feature and indeed '*The Great Train Robbery*' was the title of the first film that was in modern parlance, a record breaker of those days.

As time went on and the commercial feature of the movie came to be established beyond doubt as a result of the efforts of such pioneers as Lumiere and others too numerous to mention, better themes with a coherent story and better technique all round caused the cinema to progress beyond comprehension. This progress was due entirely to the industrial foresight of America. Though this development was aided by the pre-occupation of Europe in fighting the World War of 1914-18, there is no doubt that, even after the War, Europe would never have given a filip to the industry which the Americans did, for skilled technicians and inventors of Europe found the European financiers so apathetic that they had to migrate to America to commercialize their genius and even become naturalized Americans in due course. Thus, though invented and commercialized in Europe, the film has been placed on the pedestal of an industry by Americans alone and consequently it is natural that they used for a number of years to dominate world film markets and would have continued to do so even today had not the talkie been ushered in by Warner Bros. in 1927 literally as a bolt from the blue, though the bolt took till 1930 to reach all the film producing countries of the world. It needs to be emphasised, therefore, that it is the talkie and talkie alone that gave to the production of and trade in films in countries like India the status of a small industry, capable of growing into a major industry for, had the silent film, which

was universally understood, still persisted, American motion pictures, with their grandeur, glamour and finesse, would have still ruled the markets of the world.

An important cause of the development of American films into an industry was the preparedness of American financiers to finance film production which in India is yet considered a risky gamble. Surplus money that begged to be invested was not so much the cause of this preparedness as the conviction that an industry which in 1922 paid *huge sums through the Amusement and other theatrical taxes*, was an industry which was as gilt edged as the cotton, oil or motor car industries and must needs be helped forward. Since then the American financiers have continued to show such confidence in the industry that out of a total of \$ 3,000,000,000 invested in the film industry all the world over, in the American film industry alone as much as \$ 2,050,000,000 has been invested, of which \$ 117,000,000 is allocated to film production, \$ 20,000,000 to film distribution and \$ 1,903,000,000 to film exhibition. Again because of easy finance, of the 69,153 cinema theatres of the world, as many as 19,032, of which number 17,003 are wired for talkies, are in America alone. Then the American film has such a tremendous hold on the American public that whereas in 1922, 40 million persons visited the cinema every week, in 1939 the figure rose to 85 millions, which is the result of the continued progress of the American film which today is practically par perfection in technical, production and entertainment values.

But, the film does not merely entertain. Its efficacy as a medium of propaganda was proved beyond doubt during the World War of 1914-18 and thereafter practically every country of the West utilized it, particularly in its substandard variety which considerably reduced costs of production and exhibition and rendered it easy for transport to even the remotest part of the country, for propaganda be it political, industrial or commercial. The film failed not also as a medium of education, though in this medium its best and most rational use has been found in America, France, Sweden and Great Britain. In Germany, Russia, Italy and to a certain extent in Japan, it has been used intensively for educational purposes, but in these countries education itself being a means of instilling political propaganda in the minds of the young, it cannot be said with pride that the scholastic use of the film in these countries was purely for the imparting of education.

As against this, how far has the film industry developed in India? Founded in 1913 as the effort of an individual, its expanse after an existence of nearly 27 years is no more than the grant investment of a sum not exceeding Rs. 7,37,00,000 in all the three branches, providing employment for no more than 15,000 persons in all the aforesaid branches and with only 13,76,05,000 persons as the annual audience. Whereas in 1924 the number of pictures produced in India was 59 (silent films), in 1939 it was 150 talkies. But, it may be remembered that had the talkie not arrived in India in 1930, the number of Indian films produced would not even have doubled itself because of the super-excellence of American films. In 1939, 178 American talkies were exhibited in India with an additional 39 that hailed from Great Britain and a negligible number from Europe, all supported by short films roughly three times the number quoted above. The exhibition of all these films keeps 1,265 permanent and 500 travelling theatres busy throughout the year, though of this number roughly no more than 265 permanent theatres show foreign films while the remaining show Indian films exclusively. Thus in India today it is not the American but the Indian film that predominates. Through the aforesaid theatres roughly Rs. 3 crores are collected per year, but unaided as the industry is by easy finance, the annual drain of something over a crore of rupees in taxation by Government and Local Authorities has only served to check the progress of the industry to its logical conclusion which should be the provision of about 5,423 theatres, of which about 2,423 shall be permanent, and 400 films produced indigenously per year. This millenium can be reached, firstly if, in accordance with western methods, Banks and Insurance Companies finance film production, construction and equipment of cinema theatres and secondly if the incidence of taxation, which today works out at the staggering percentage of 33-1/3 of the gross collections, is reduced to 15 per cent. only, for the industry as a whole is running at a loss which it cannot continue to suffer so long. Every industry or trade has to make a minimum profit for its existence and it can only be assured to the film industry in the two ways herein pointed out.

July, 1940.

Constructional Engineering in India.

By RATANCHAND HIRACHAND, Esq., M.A.

(Chairman, Indian Hume Pipe Co., Ltd.)

Ratanchand Hirachand, Esq.

Mr. Ratanchand is the son of Seth Hirachand Nemchand of Sholapur. After Matriculation he joined Arts College in Poona and passed B.A. from the Deccan College in 1927. He joined business after graduation and studied privately and passed M.A. in 1930.

He has been Director in charge of the Indian Hume Pipe Co., Ltd., Bombay, for a number of years. He is also a Director in the Premier Construction Co., Ltd., Bombay.

THE progress of Constructional Engineering has been very remarkable in India from times immemorial. Ornamental construction of Temples and Palaces, building of Irrigation Dams and roads and the erection of public buildings were undertaken by the Rulers of various Kingdoms of this country before the British Rule. The problem of defence on the Frontiers was also satisfactorily tackled by them. From the nature of various architectures of old and ancient structures it can be seen that the Constructional Engineering was then in the advanced stage and the men who had taken part in the

actual construction must have possessed the knowledge of Engineering beyond our expectation.

Since the advent of British Rule in this country the science of construction has made very rapid progress as in case of other countries and the subsequent scientific inventions in transport greatly assisted the speed of progress up to the present stage.

The introduction of Railway construction in this country during the latter part of the last century forms an entirely new feature in this line. Most of the important items of such construction required for the building of railways was undertaken on the basis of departmental working and the part played by the contractors in those days was comparatively very small. The requirement of a large number of road and river bridges was to a great extent responsible for the development of the system of constructional contractors, who could control the supply of labour and material and organise the whole work under the direction of the railway administrations. The various railway works which involve a variety of work could provide ample field for the local contractors.

Hydro-Electric works with their new features and technicalities gave a good scope for the development of this branch of Engineering in the country. Also, the vast construction of ship yards at important harbours on the Indian coast, after the establishment of the British Rule, promoted the welfare of engineers and contractors to a great extent.

The firms of Constructional Contractors such as The Premier Construction Co., Ltd., Bombay, MacKenzies Ltd., and Gammons Ltd., who command an extensive organisation to undertake works of a large magnitude, were hardly in existence in a large number before the beginning of this century. The contracts were formerly entrusted to private enterprising persons and such contracts entrusted were comparatively small in their scope. The technical matters in such cases were being handled

by the departments concerned and special jobs requiring highly skilled knowledge and accuracy from the engineering point of view were executed under the experts' control. It is no wonder, therefore, that one large engineering work had to be divided into several sections to enable the individual contractor to execute the same, according to his ability.

In the field of Constructional Engineering, as in the case of many other fields in this country, the part played by the Indian firms was comparatively small. A few decent European firms in former days were seen busy in the line and fairly large works in Railways, Irrigation Departments and Port Trusts were entrusted to them. In the course of time, many Indian private enterprises in the line of contractors could be seen in the field as a result of modern education. The formation of Public companies with limited liability was a great necessity in view of the large capital required for the execution of big contracts and the heavy risk of loss involved while executing the work. This is all the more so when huge constructions of urgent railway embankments, large bridges and works of a varied nature were being taken up on an increasing scale by the Government and Railway Departments in India.

At the present time, rapid progress has been made by Indians in the sphere of constructional engineering. Equipped with technical knowledge made available in India and abroad, our engineers are now in a position to take up important posts in large construction works. Prominent engineers such as Sir M. Visvesvariah, Nawab Ali Nawaz Jung Bahadur have attained world-wide fame and to their credit goes the establishment of some of the largest engineering construction work in India. The well-known Nizam Sagar Dam in Hyderabad State and the work of the Krishnaraja Sagar Dam in Mysore State deserve special mention, while in the construction of Lloyds Barrage in Sind quite a number of Indian engineers have rendered their useful services.

The engineering experience obtained by private contractors and engineering firms is of great importance and extremely valuable for the development of constructional engineering in this country. In this respect the name of The Premier Construction Co., Ltd., deserves special attention. This company, originally established as the Tata Construction Co., Ltd., in the year 1920, has been from the beginning of its career under Indian management. They have constructed huge works in almost all the spheres of constructional engineers in every Government department and in every part of the country. The famous Military works for buildings executed by this firm recently at Quetta exceed Rs. one crore in value. This was possible on account of the large engineering staff with varied experience aided by sound financial resources. The construction of bridges for the Railways was achieved by this firm to the satisfaction of the Railway administration. The first railway bridge which required an amount of pneumatic well sinking was entrusted to this organisation by the North Western Railway on the River Indus near Kalabagh. This undertaking was successfully completed by The All India Construction Co., Ltd., a subsidiary of the Tata Construction Co., Ltd. Under the name of the Tata Construction Co., Ltd., very creditable works were executed, namely the Tansa Pipe Line work worth about Rs. one crore and the Bhore Ghat realignment scheme worth about Rs. 40,00,000 at Khandala. In addition to this many important buildings for the Mills, Banks, Offices and for Public Works Department have been constructed by this company. At present large contracts are in hand with another subsidiary company known as The Hindustan Construction Co., Ltd., in Ceylon worth about Rs. 1½ crores. The original name of The Tata Construction Co., Ltd., was changed to that of the Premier Construction Co., Ltd., in the year 1935.

Indian firms contractors are not found slow in the march of progress in the sphere of constructional engineering. In the type of reinforced concrete works, great projects

are executed throughout India by the firms such as MacKenzie's Ltd., of whom mention ought to be made for having specialised in the making of furniture and asphalt and concrete roads throughout India. In this respect, also, the Premier Construction Co., Ltd., have achieved a remarkable success by completing large R.C.C. works throughout India.

R. C.C. Syphon Spill Way construction at Indore by the Hindustan Construction Co., Ltd., another subsidiary of the Premier Construction Co., Ltd., is the only work of its kind in India designed and executed for the Water Supply Scheme for Holkar State.

In the field of sanitary works the Premier Construction Co., Ltd., have to their credit a separate large organisation under the name of the Indian Hume Pipe Co., Ltd., as a subsidiary company, which manufactures and supplies spun concrete Hume Pipes and Hume Steel Pipes which are extensively used in the Water Supply and Drainage projects throughout India. This subsidiary firm is largely financed by the Premier Construction Co., Ltd., and has a network of about 32 factories established in all the important industrial centres of India and at Rangoon and Colombo.

India, a vast Continent with her millions of men and women, presents a large unique field for infinite development of engineering construction. This country is full of mineral wealth and other natural resources. India is looking forward to the development of large enterprises to ensure greater and greater prosperity and to solve the acute economic problems. It is no wonder, therefore, that the part to be played in future in the sphere of constructional engineering by Indian enterprise is a formidable one and the scope in view is full of great possibilities.

May 1940.

Small Industries.

By MADHAVLAL MAKANJI BHATT, Esq.

Chairman, Association of Indian Industries, Bombay.

Madhavlal M. Bhatt, Esq.

Mr. Madhavlal Makanji Bhatt, Managing Director, Madhavlal & Co., Ltd., Coal Merchants, Commission Agents and Railway Contractors. b. in 1886 ; Passed matriculation at the age of 17 ; joined service. After three years started independent business as a coal merchant. Was made Justice of the Peace and Honorary Presidency Magistrate in 1926. Doing social work and connected with educational and co-operative activities. Was Chairman of the Fort and Divisional Co-operative Institutes for about 12 years. One of the Founders of the Bombay Co-operative Insurance Society. Has made charities to the extent of about a lac of Rupees by way of scholarships, maternity help, medical help, famine help and to Hostel for students. Founder of the Khar Gymkhana and the Khar Education Society. Has made a donation for a public Park in Khar. Has travelled widely and specially studied questions regarding coal in foreign countries like Germany, England and America. Has been a member of the Committee of the Indian Merchants' Chamber for several years. Visited Berlin in 1937 and attended the International Chamber of Commerce Congress held there as a delegate of the Indian Merchants' Chamber. Elected President of the Indian Industries Association in 1939. Address : Alice Building, Hornby Road, Bombay ; and Linking Road, Khar, Bombay.

INDIA is pre-eminently an agricultural country and nearly 75 per cent. of the population remains idle for about six months during the year. Time was when she combined agriculture with industries, and not only she was self-sufficient but also exported many of her products outside to neighbouring and distant countries. Industries in those days, however, were not moved by power but by hand. The age of machinery has changed the face of the earth and has also changed the face of India. All the old industries, for which India was famous, could be classed as cottage industries, as, in the first place, they were not moved by power, and, in the second place, their object was not mass production. The production *en masse* is a peculiar characteristic of the machine age, when articles are manufactured not only to satisfy the genuine and *bona fide* needs of the country, but also to export them to foreign countries with a view to making large profits.

We can classify the industries in this country as large scale industries, small scale industries and cottage industries, the two former being moved by power and the third by hand. The cottage industries were driven out on account of their competition with machinery, and it was not till recently on account both of the Swadeshi movement and the gospel of Mahatmaji that cottage industries have received a new impetus, and it now appears likely that they will also have an abiding place. With regard to the other two, the large scale industries can be classified as cotton textile, jute textile, coal, iron and steel and sugar. Excepting these industries, the other industries which are moved by power can be classed as small scale industries. Even among these small scale industries, there are some industries such as soap, which, to be properly conducted require large capital. There are such factories in the country with a fairly good capital and a fairly heavy production ; but otherwise soap is manufactured by machinery in many small factories. During the time of the last War, it was computed that there were more than 150 small factories in Bombay turning out washing soaps, and some of them also turning out toilet soaps. Even now, scattered throughout the length and

breath of the country there are several small soap factories turning out specially washing soaps, for which there is a very large market in the country. Indian people are known for their regular bathing habits and generally, even the poorest wash their clothes regularly which is specially called for by the climate. Toilet soaps may not still have found much popularity, but washing soaps have decidedly got a big market. With soaps, there are toilet requisites also ; to supply these, several factories have been started which produce hair oils, lotions, ointments, pastes for applying to the forehead and scents, etc. The growth and development of the toilet industry has not, however, affected foreign imports as may be seen from the fact that while from 1921-22 to 1925-26 imports were as follows, they have gone up from 1932-33 to 1936-37 :

Year		Amount Rs.	Year		Amount Rs.
1921-22	- -	24,38,751	1932-33	- -	58,13,685
1922-23	- -	41,70,202	1933-34	- -	56,61,474
1923-24	- -	48,94,289	1934-35	- -	64,04,314
1924-25	- -	45,11,419	1935-36	- -	66,06,351
1925-26	- -	49,56,366	1936-37	- -	67,24,897

The next industry in importance may be said to be the tobacco industry. This also is both a large scale and a small scale one. Several non-Indian companies have put up very large plants in this country with a production much higher than all the other small factories combined. The small factories are just able to keep themselves alive, though the competition they have to face from the big factories is one of the hardest. Bidi making belongs to the cottage industry class, though there is no reason why in the near future machinery and power should not be employed for the manufacture of even *bidis*. This will lead to standardisation of the products, which is essential for the success of the industry.

The glass industry should have been classed as a large scale industry, but unfortunately, there have been numerous failures in this respect, mainly because of the lack of protection from Government. As a small scale industry, it is being conducted in several places, but the competition, especially from Japan and some European countries, is very severe. The bangle-making industry has made good headway as a small industry.

Stationery is also now being produced by small factories, and so this can be properly called a small scale industry, as there are no big factories such as in Europe to satisfy the requirements of the country. With the expansion of education, there will naturally be a great demand for stationery of all sorts, including ink, and it is a matter of the deepest regret that we are not able to satisfy our home requirements. The small factories started at different places try to produce nibs, pencils, pen-holders, and other stationery requisites. There are some big paper factories and the art of making hand-made paper in villages is being revived. I am quite sure, that if power is utilised with regard to the manufacture of the varieties of hand-made paper in the villages, it can be developed as a successful small scale industry.

The leather industry has been a successful small industry for a long time. In this connection it is gratifying to note that the Congress Government started a Government Tanning School at Bandra (Bombay), where training is given for the manufacture of several kinds of leather articles such as bags, boots and shoes, etc. I feel that if such industries are started on a co-operative basis by such trained boys, they can be run with great success. There are now some big factories put up, notably what is known as the Bata Factory in Calcutta, but these large plants, while being a menace to the small factories and to cottage industries, have not yet been able to oust the latter. There are thousands of shoemakers in the country, plying their useful trade, and several of them have now taken to use power also for their manufacture. They are able to export their products to South Africa and other countries, where there is a good demand for Indian products.

India is, unfortunately, lacking in the pharmaceutical industry, and we have hardly half a dozen good pharmaceutical factories. We import medicines and pharmaceutical requirements to the tune of Rs. 225 lakhs on an average per year ; and it is a crying

shame that even for such necessary articles we do not have sufficient factories. There are now, however, small factories started at several places which try to make up the lacuna. Care, however, should be taken that at all these factories a standard of purity and perfection is kept up as these pharmaceutical products, if badly made, would adversely affect the health of the people. The recent Bill to regulate the import-manufacture, distribution and sale of drugs, passed by the Central Legislature will, let us hope, go a long way in maintaining a high standard.

The gold and silver thread industry is doing very well in places like Benares, Surat, etc. This industry is a typical specimen of what can be achieved by a wise and rational co-operation between Government and the industry. Government helped in imposing a protective duty, while the manufacturers co-operated by sending out experts for training in Europe and conducting their factories honestly and conscientiously.

The sports goods industry has also made good progress, and Indian sports goods are now known in several countries in Europe, Egypt, Africa and even Australia. The sports goods manufacturers in the Punjab are known for their enterprise and their salesmen are moving practically all over the world to push their wares. There are also many small industries which can be organized and developed in this country. Among these which have been taken up and developed already, I may mention, over and above those to which I have already referred, furniture-making, toy making, bakelite articles, chlorine, lock making, manufacture of fire works, disinfectants, carpet and sari weaving, steel trunk making, hosiery, button making, cutlery, pottery, biscuit manufacture, etc. Our small scale manufacturers can also take up with profit, both to themselves and the country at large, the production of scientific instruments, enamelling, lace making, preservation of fruits and preparing of fruit juices. With regard to the last two items, we have to note with regret that oilmanstores are coming here to the extent of Rs. 275 lakhs a year from other countries, specially, I think, America. Is it not regrettable that, while we can get here the best of vegetables like tomatoes and other green products and we also produce fruits of every good varieties, we should be importing tins containing tomato soups and juices and orange juices, etc. not to mention many chutneys and sauces, which can well be manufactured in this country. In fact, several European families, as also a large number of Indian families who have taken to Western ways and methods of living, depend practically for all their daily household requirements upon these imported tinned foods. The best thing they can do is to turn their attention from these imported tinned foods to fresh Indian products, and the next best thing is for our manufacturers to supply them with Indian tinned foods, so that there may not be further imports of these from foreign countries.

Some 40 years back there were several small industries in this country which had thrived, but due to several reasons among which may be mentioned, foreign competition, lack of protection and want of adequate capital, they became non-existent. But, with the national awakening since the year 1910 or so, attempts are consistently being made, although on a small scale, to revive some of these small industries on an economic basis, but so far the results are rather disappointing. The attention of several businessmen was diverted to this neglected vital problem and with a view to bring together manufacturers and representatives of small industries and thus form a common organisation for the promotion and protection of all industries, an Association called the Association of Indian Industries was formed in Bombay in the year 1936.

The Association of Indian Industries, Bombay, since its inception, has been doing its best to promote and safeguard the interests of small industries. The Committee of the Association felt the necessity of collecting statistical data on various points in regard to small and cottage industries, as hitherto no such efforts were being made, and they hope to complete their efforts in this direction as early as possible. This information will undoubtedly prove very useful, both to manufacturers and dealers and their co-operation in this task is very earnestly solicited in the best interests of themselves.

The Government of Bombay in the year 1938 appointed an Economic and Industrial Survey Committee to examine the present position of small industries with a view to survey the work done by the Government of Bombay in the realm of economic development and to report suitable measures which the Government can undertake to promote economic developments. It is also gratifying to note that the Government of Bombay have decided to establish a depot for the sale of products of handlooms, cottage and small scale industries as an experimental measure for three years.

It is appreciable to note that the Government have started doing their bit towards the promotion of small scale industries but it is essential at the same time to extend protection to such industries not with a view to derive revenue but with a view to see that the proceeds realised are utilised in supporting technical institutions.

May 1940.

India and the War

By MANU SUBEDAR, Esq., M.L.A. (Central), B.A., B.Sc. (Econ.), (London), Barrister-at-Law.

Manu Subedar, Esq.

Mr. Manu Subedar is a Fellow of the Elphinstone College, B.Sc. (Econ.), (London), First Class honours in Public Finance, Banking and Currency, Barrister-at-Law, Gray's Inn, 1912; Managing Director, Acme-Bala Trading Co., Ltd. *Educ.*: New High School, Bombay, First in Matric from the School. Elphinstone College, Bombay; James Taylor Scholar & Prizeman, London School of Economics, London University, South Kensington; Gray's Inn. Returned to India in 1914. Lecturer in Economics, Bombay University. Professor of Economics, Calcutta University. Examiner for M.A., Bombay and Calcutta. Secretary, Sholapur Spinning and Weaving Mills Co., Ltd. (1917); Secretary, Morarji Goculdas Spinning & Weaving Mills Co., Ltd.; Managing Director, Western India Small Industries Corporation Ltd. (1919); Partner, Lalji Naranji & Co., Managing Agents of Jupiter General Insurance Co., Ltd.; Representative of the Indian Merchants' Chamber on the Bombay Port Trust; sent to England by the Government of India to give evidence on behalf of the Indian Commercial Community before the Babington-Smith Committee; Managing Agent of the Pioneer Rubber Co. (1920); Director of the Peninsular Locomotive Co., Ltd. (1924); Managing Director, Acme-Bala Trading Co., Ltd. (1925); Representative of the Indian Merchants' Chamber on the Advisory Board of the Development Department.

Wrote separate dissenting report on Back Bay Reclamation Scheme and also on Housing Scheme. Representative of the Indian Merchants' Chamber on the Bombay Improvement Trust Committee; appointed member of the Indian Central Banking Enquiry Committee. Official adviser in various matters of technical finance to the States of Mysore, Junagadh, Jodhpur, and Cutch. Nominated by Government of Bombay to the Municipal Corporation (1930). Wrote separate Minority Report on the Indian Central Banking Enquiry Committee, 1931; Vice-President, Indian Merchants' Chamber, 1932.

THE very idea, that war would enable large profits to be made, has killed those profits by the fact that, in nearly every market, large stocks of imported material have been carried, and the attempt to raise prices of those materials has not succeeded, partly through the falling off of the demand and partly through internal competition. The speculative search for profit failed during the Manchurian campaign of Japan and, later, during the Abyssinian campaign of Italy. Munich was a blow to these people, as a war that was expected, did not materialise. Yet when the war broke out, India was well stocked with imported materials at the hands of those, who were on the look-out for speculative profits.

There was a spectacular rise of prices, the leaders of the movements being jute, silver, steel, chemicals and drugs. There was sporadic hoarding at the hands of retail buyers. Cloth and cotton speculation was indulged in by all and sundry, even little shopkeepers holding one bale! All this received a check. The retail buyer withdrew his custom for the time being, and the turnover was small. Dealers and others did not find their holding power adequate to sustain the rise which had taken place.

In rubber and tea, the system of export quota and control respectively was adopted. In other articles, Government soon introduced checks in the form of export restriction

making it compulsory for exporters to take permits. Permits were not granted except to those who demonstrated that they had sent out that commodity to that country and port in quantities during that particular month over an average of the last three years. There was much initial delay and distress to exporters through this system. It was obvious that Government were anxious to keep down exports, partly to conserve the resources in India and partly to prevent percolation to enemy countries. The effect was a fall of prices, which gave a windfall and a considerable indirect advantage to the Supply Department and other agencies, who were purchasing not merely for the United Kingdom, but for the Allies as well. It is true that India has sold considerable quantities of commodities and has a favourable balance, but it is also true that the hope of India selling large quantities at high prices, which would have prevailed but for these measures, and making crores of rupees, which would go to rehabilitate her economic life, has been definitely blasted.

In the beginning of the war, many passenger boats on the coast were requisitioned, and sea freights rose rapidly. So did insurance rates. There was a surcharge levied on rail freights, which also went to increase prices. The prices of imported articles on the replacement basis were very high. Provincial Governments attempted measures at price control in response to popular outcry, which were a failure, and generally the community has to pay more for almost every article which is consumed now. The working classes suffer everywhere and, in some cases, where they have a Union machinery, they have succeeded in getting an advance, but, taking employees as a class, they are not better off. A close examination will prove the refutation of the official propaganda, that India is gaining much prosperity through the war.

This official propaganda was the peg, on which the imposition of the excess profits tax was based. Other measures adopted in all provinces and at the Centre show that, right from the beginning of the war, India has to bear a heavier taxation. There are veiled threats that such taxation might increase.

Much is heard about the stimulating effect of war on Indian industries. In the case of steel and cloth, which were imported before, but the import of which has now become difficult or dearer, the stimulus to established industry is real. But the progress of industry is definitely checked, because of the difficulty of getting machinery and equipment from abroad, and of the heavier cost when such importation is at all possible. Much secondary industry will arise in India, however, on the repair side as well as on the side of substitution, a few commodities being manufactured from available Indian resources. Such industry also grew during the last war, but much of it had a short life. Subsequently, there was much unemployment in U. K., and all measures were taken to stimulate the purchase by India, which is regarded as England's principal market. It is obvious that India had not, during the last war, the power to retain much of the industrial advance made under these circumstances. It is true that heavy taxation in England has induced many companies to establish branches in India under Indian registration, and that several industries have grown up in India over the last twenty years. But the war stimulus has only touched those industries, particularly the engineering group, whose products are required for war purposes to supplement the production of munitions generally carried out in Government workshops. The stimulus from increased demand from the interior, through larger prices reaching the farmer, will in due course be felt, if the war is prolonged.

The value of stocks and shares in India showed an immediate rise, and the frequent peace rumours from one quarter or the other caused a set back to these prices, indicating the instinct of fear of the market, that peace would destroy the adventitious gains, which several industries were likely to secure during the war. The market was also following telegrams from London and New York, where, for different reasons,

prices were soaring. The scale of Government expenditure in the United Kingdom and the purchases of all kinds of commodities were so great, that the stimulus in the United Kingdom was much more real. As speculation in commodities, including manufactured commodities like cloth and steel, abates in India, the tendency of the prices of industrial and other shares would be not to rise any further, but to decline slightly.

With the beginning of the war, there was a lot of hoarding of coined rupees and of the precious metals. Such hoarding was met by the ample resources in the hands of the Reserve Bank, but additional note issue was made, as required, showing an increase of Rs. 57 crores in the holding of sterling securities in the reserve. This means in effect, that India has lent out to the United Kingdom Rs. 57 crores, and would go on lending more, as the volume of note issue increases. The other device to borrow from India is the scheme for the repatriation of sterling securities. Government have created four new classes of rupee securities corresponding to the maturities of these sterling securities, and the Reserve Bank has offered to sell these to public, apart from the privilege of transfer to the rupee register for existing holders. What quantities have been dealt with in this manner, has not been disclosed yet, but it is obvious that, before long, India would repurchase approximately £300 million sterling worth of securities from the United Kingdom. This movement would strengthen the hands of Government in maintaining the exchange at 1s. 6d., in addition to the other measures to keep down the volume of the balance of trade in favour of India. There are many commodities, which cannot be purchased, and imports generally have fallen. Silver speculation has been definitely checked by fixing the upper and lower limits, a measure, which elicited opposition from the section which was seeking speculative profits. The general arrangement appears to be that India should receive, for her favourable balance of trade, neither gold nor silver, but sterling debt owing by India to the people of the United Kingdom. The query all round amongst commercial circles, as to whether there will be any change in the Indian exchange, may be replied to by saying that no such change will occur through the inability of the Reserve Bank to maintain the official rate.

Exchange restrictions have been also put, every exporter being called upon to explain the manner in which he will receive payment for his exports. The dealings with enemy countries are automatically dead, but the dealings with neutrals have been also restricted, explicitly so far as the exports are concerned. The settlement of India's dealings with the world is made through sterling, and the British Exchange Control gets the advantage of an enormous amount of favourable balance in India's dealings with other countries, such as U.S.A. The East India Cotton Association rightly protested against Indian trade with America being compelled to receive and make payment at an artificially appreciated rate of \$4.02, when the cross-rate for the pound with the dollar in the free market is \$3.32. Apart from the deflationary effect of such a measure, it has the effect of compelling India's currency authorities to accept sterling, or sterling securities, (the further fall in whose value is inevitable) and to look to nothing else as a reserve for emergencies. It has also the effect of preventing the import of precious metals by India, which, under war conditions, is inevitable. The export value of India's gold is kept artificially low, whereas, but for Government's measures conceived from London, gold prices in India would be on the basis of import parity today. How long and in what manner Government will keep up these restrictions, remains to be seen.

A similar artificiality exists with regard to the prevailing money rates in India, the bank rate being no reflex whatsoever of the millions of money transactions, which take place between various individuals in the country. Cheap money and deflation cannot be companions for long, even if they are arbitrarily brought together. The fear

of inflation, which is real in the United Kingdom, has, unfortunately, overcome the authorities at Simla. India needs a certain amount of inflation to correct the evil effects of deflationary policies in the past, and it is a great pity that even the occasion of war of this magnitude should deprive India of the stimulus, which she has long needed and which, in view of the assistance which the United Kingdom receives from India directly and indirectly, she richly deserves.

Businessmen are not normally concerned with political issues, but the process of sending India to war has been questioned. Whereas the Dominions were consulted, war was forced on India by her English rulers without any consultation with Party leaders in the legislature. The war effort of India is, therefore, incomplete and one-sided, the spontaneity and the fullest co-operation of the Indian people being absent. The stupidity of British rulers in India (the counterpart of which in the United Kingdom itself has been disclosed by the recent Parliamentary debate) is so colossal that, after the experience of the last war and since 1933, when any observer could have predicted a new war, they have not taken care to organize the enormous resources of this country in men and material for defence purposes. The fullest effort by India over a period of five years would have secured not only all that is needed for the defence of India and the East, but much surplus for the United Kingdom. It is not Hitler, who has missed the bus, but His Majesty's Government and their agents in India. This reflection is forced on one, who notices now the eleventh-hour efforts of Government and their several departments to take from India indirectly, without acknowledgment, much which would have been given willingly and in ten times bigger quantities. Considering that the war can easily last another five years, the supine stupidity of British statesmen, who are determining India's relations with England, seems to be very bad business. Indians have developed, in spite of local controversies, sufficient national consciousness to think of India separately and to watch India's interests, and to resent what is taken without legislative and popular sanction.

May 1940.

The Investor.

By PROFESSOR C. N. VAKIL, M.A. (Bom.), M.Sc. (London), F.S.S.

*(University Professor of Economics and Administrative
Head of the School of Economics and Sociology, Bombay.)*

Prof. C. N. Vakil.

Professor C. N. Vakil is the University Professor of Economics and Administrative Head of the University School of Economics and Sociology, Bombay. Prof. Vakil who is well-known as one of the leading Economists in the country, has done considerable work in creating a research atmosphere and tradition in the Post-graduate School of Economics with which he has been connected now for nearly twenty years. He is the Editor of the series of 13 volumes called "Studies in Indian Economics" which embody the results of the research done by him or by some of his best students.

Prof. Vakil was President of the Indian Economic Conference held at Patna in 1934. He was a member of the Economic and Industrial Survey Committee of the Government of Bombay and is associated with the work of the National Planning Committee being a member of three of its sub-committees. Prof. Vakil gave evidence before several Committees and Commissions. He led public opinion in the country on the Ottawa Trade Agreement in 1931. He is a member of the Imperial Council of Agricultural Research representing the Indian Universities.

Prof. Vakil is the Honorary General Secretary of the Gujarat Research Society which has been doing useful work for the cultural development of Gujarati-speaking

areas, including Kathiawad and Cutch. The Society publishes a quarterly journal edited by him.

In modern times the man who saves has facilities for investing his savings in productive undertakings. He helps the industrial activity of the country by such investment and at the same time realises a reasonable return or interest on his investment. With the growth of modern large scale industries and the corresponding growth of the money market in the country, these facilities have grown. But with such growth have naturally arisen the problems of investment and the need for understanding the same. Unless the investor is able to understand and appreciate these problems, he will not be in a position to make his investment properly.

It is not possible to review in a brief article the many complex problems which the investor may be faced with. We shall however indicate broadly some of the general considerations, and show that a fuller and continuous study of the same requires a more systematic effort and arrangements than are to be now found in the country, even in cities like Bombay.

The prices of different kinds of securities either industrial or government which are quoted on the Stock Exchange show two kinds of movement—(1) the day to day movement and (2) the long-range movement. The long-range movement depends on the demand for money and the supply of money. The demand for money depends on the productive activities in the country, which in turn depend on the demand for the goods produced. The demand for money also depends on the financial position of the Government, particularly the loans which the Government raises during any given period. The supply of money is determined by the savings of the people which seek investment. The repayment of loans by the Government causes an increase in the supply seeking investment. There are other factors affecting the demand for and supply of money, either external or internal, but we need not go into these details at the moment.

We have indicated the factors which determine the long-range movement in the money market. The day to day movement depends on the same factors, which are often superimposed by other passing factors, such as, political factors, war, speculative transactions, sudden changes in imports or exports, or sudden movement of capital and so on.

It is obvious from the above, that the more fundamental factors require careful study of complex phenomena. The temporary factors require timely information and a quick perception of their effects on the money market. For example, the position of different industries in the country cannot be understood except under a world background of similar competitive industries in other countries. The raw materials for the industry, the technique of production, the problem of labour, the organisation of marketing and the allied problem of transport are among the important problems which have to be understood to appreciate the position of an industry. So far as the competition of foreign industries is concerned, the policy of the State, protective or otherwise, has also to be borne in mind.

In the same way, the finances of any Government are a complex affair liable to several changing factors reflecting the entire economic life of the country. The financial policy of the State depends partly on the political constitution of the country and partly on the requirements of the people. The loan programmes of the Government may be either for productive works such as extension of railways and irrigation ; or for development schemes such as sanitation and education in rural areas ; or for unproductive purposes such as war or provision for defence.

Just as these factors determining the demand for money require a highly specialised study, similarly the factors determining the supply of money also require such study. The savings of a people depend on their income and expenditure, or in other words, on their productive capacity and standard of living. The savings that seek modern investment are determined by the habits of the people and their understanding and confidence in modern methods of investment.

Timely information regarding the temporary factors and their effects on the money market requires a systematic machinery for the supply of the same to the investing public. The necessary judgment of the effects of such factors on the money market requires skilled knowledge and close familiarity of the working of the money market, so much so that the expert financier is able almost instinctively to determine the nature and scope of the effects of a given passing event.

These observations are made in support of the statement made above that the factors affecting the money market require a careful study, timely information and a quick perception. It is obvious that those who combine these qualities, or those who take care to obtain the services of experts who possess these qualities stand to gain in making their investments.

How many of those who deal in the investment market make it a practice either to possess these qualities or to obtain the services of those who possess the same. The answer will be distressing because on inquiry it will be found that only a limited number of persons satisfy this condition. A large majority of persons follow a policy of drift, are often led away by rumours and are subject to panic at the slightest untoward movement. They risk their fortunes in this unsystematic effort, and involve themselves in misery in the end. The gambling instinct in man leads many to adopt this apparently easy and attractive method of getting rich quickly, because someone perchance has made large gains in this way, ignoring the fact that hundreds or thousands have been

losers at the same time. Of course, it must be added that this is the result not so much of mistakes in genuine investment, but of the speculative transactions which develop out of the trading in futures allowed in modern Exchanges. It is not the purpose of this article to discuss the nature of future transactions but to indicate the complexities created by them from the point of view of the investor.

The general conclusion at which we arrive from this rapid review of the problems that an investor may have to consider is that steps should be taken to have more informed opinion among the investing public regarding these factors, and also to make specialised information or advice available to those who seek the same. For this purpose, the following steps may be suggested :—

- (1) Industries should publish more timely information about their activities, useful to the investor.
- (2) Financial journals should improve the quality of their work, and in particular publish critical and independent examination of the position of industries and of other factors affecting investment.
- (3) Industrial Associations, and large firms, either industrial or financial, should maintain an economic and statistical service, whose function should be to collect data and publish the same, and at the same time give advice to those who seek it. (The present volume is a praiseworthy effort in this direction.)
- (4) Universities should encourage the study of problems of investment and allied subjects in their degree courses.
- (5) Universities should also encourage research work in these problems and publish the results of such researches from time to time. The business world should consider it an investment to endow liberally such research work, and to co-operate in carrying it out.

As one connected with the University School of Economics and Sociology in Bombay, an institution devoted to post-graduate teaching and research in these subjects, I may be permitted to say that so far as the last mentioned step is concerned, the University of Bombay has done its part and has now a well equipped school for the purpose with an experienced staff and an adequate library. Some part of the work of the School is in the direction mentioned above; and in carrying out the researches undertaken by the School, it has met with a fair measure of co-operation from those engaged in business and industry. The expansion of this work in a more specialised way requires more staff and more funds and at the same time a much closer contact with those engaged in business and industry. In western countries such contact has led to valuable results, and the princely endowment of Rockefeller and Nuffield in the fields of research may only be mentioned to indicate the high appreciation of such research on behalf of the business world which exists in these countries.

Excess Profits Tax Explained

By R. K. DALAL, Esq., B. Com., F.S.A.A., R.A.

R. K. Dalal, Esq.

Mr. R. K. Dalal, B.Com., F.S.A.A., R.A., the author of this article is a practising Incorporated Accountant and is a well-known expert on Income-tax Law and Practice. He was one of the three advisers of the Federation of Indian Chambers of Commerce and Industry when the Income-tax Amendment Act 1939 was forged through the Legislative Assembly last year. He has made a close and deep study of the Excess Profits Tax and his series of articles in 'Commerce' criticizing the provisions of the Bill was well received both by the Government and the members of the Legislative Assembly and was helpful in suggesting many constructive amendments of the provisions of the Bill. His lucid exposition of the Excess Profits Tax in this article will be very much appreciated by the mercantile community generally and we have much pleasure, therefore, in giving publicity to it, since it is free from legal technicalities, and even a layman can easily follow the many intricacies of the Tax.

THE Government of India have recently put on the Statute Book an Act called the Excess Profits Tax Act 1940. The object of the Act as stated in the Preamble is to impose a tax on excess profits arising out of certain businesses in the condition

prevailing during the present hostilities. The Government are of opinion that while war has necessitated greatly increased expenditure by the Government on defence and other services, it has simultaneously created opportunities for earning by companies and persons engaged in business of abnormally large profits. The Government intend by the Act to secure a considerable portion of such additional business profits which accrue as a result of the conditions prevailing during the war. Though therefore the intention of the Government to enact this measure is to tax profits which accrue or arise in the conditions prevailing during the war, there is nothing in the substantive provisions of the Act restricting its operations to war-profits only. Even the natural growth of business as compared with standard years would also come in to be taxed. In the course of the debate on the Excess Profits Tax the Finance Member observed in justification of taxing not only war-profits but the growth of profits. He observed :

" In time of war profits arise not merely from the direct supply of the materials of war, but from a large number of transactions which are inseparably connected with that essential feature of a war time situation. There is a general quickening of the whole tempo of economic activity, and that has its roots in the imperious demand for the necessities of war. It is not possible, Sir, to make philosophic distinctions between the degree of relation which certain industries have to the facts of war and that of others. I am prepared to admit that there may be cases in which it may be possible to establish a complete isolation of the fortunes of the business from the economic circumstances of the war. But I cannot hold out the hope that I would be prepared to go into a meticulous discrimination between industries which supply directly the needs of war and those which supply the needs of war."

SHORT ACT.

The Act is a short Act consisting of only twenty seven sections and three schedules. Though at first sight it seems to be simple, in the actual application of its provisions the

Act does not seem to be so simple as the first reading is likely to suggest. Some of the provisions are indeed very complicated.

DURATION.

With a view to subject such a taxation measure to periodical review by the legislature, the duration of the Act has been limited up to the end of March 1941. So that, unless an Amending Act extends this date, the taxing provisions automatically cease to have any effect.

RATE OF TAX.

The Act imposes a tax of 50 % on the excess profits made by any business in any Chargeable accounting period after 1-9-1939 over what is called in the Act Standard profits.

STANDARD PROFITS.

When one talks of excess it postulates a standard by which excess is to be determined. To measure the excess therefore a standard must be evolved. The Act provides therefore a standard period. This period consists, speaking in terms of calendar years, of four years, *viz.*, 1935 to 1938. Profits made during this period may, at the option of the assessee, be adopted as the standard. But the profits of the above years are not allowed to be taken singly, except profits for the years 1935 and 1936. The rest of the years must be taken in the following combinations ; either 1935 with 1937, 1936 with 1937 or 1937 with 1938. Average profits of any of the two years will then afford the Standard, and the Standard most beneficial to the assessee can be adopted by him for determining the excess profits during the chargeable accounting period. Any business in respect of which the above Standard period is available may adopt any one of the above options. But the standard period in no case can be a period of less than nine months.

If the business existed during the above standard period, it can adopt these options, but there may be at the time of assessment businesses which may not be in existence during the standard period, or if in existence, were not in existence during the whole, but only part of the period. Such contingencies must be provided for. The Act therefore, further, provides that if a business was not in existence before 31-3-1936, it can have an additional option of computing the standard profits on the capital basis. It can compute the standard at either 8 per cent. if the business is that of a body corporate, or 10 per cent. if it is any other business, on the average capital employed in the business during chargeable accounting period. In case of a business commencing on or after 1-7-1938 the foregoing percentages shall be increased by 2 per cent.

It may be that inspite of these options the profits of a business may be very low during the standard period and very high during the chargeable accounting period, in which case the assessee may either :—

- (1) adopt the minimum standard of Rs. 36,000 which applies in all cases, or
- (2) apply to the Board of Referees to fix his standard profits at a figure greater than those reflected by his records.

If the Board is satisfied that during the standard period the profits of the business were less than might at the beginning of that period have been reasonably expected, the Board may direct that the standard profits may be taken at such greater amount as the Board thinks fit. But this increased standard, normally, cannot exceed the statutory percentage of the average capital employed in business, unless some specific cause peculiar to business is deduced to the satisfaction of the Board, in which case the Board can allow even the greater amount to be adopted as the standard.

The Board of Referees will not be an official body. For, it shall consist of not less than three and not more than five persons, of whom less than one-half shall be non-officials having business experience, and one shall be a judicial officer. While all officers employed in the execution of the Act shall observe and follow orders, instructions and directions of the Central Board, these orders and instructions shall not apply to the Board of Referees. Thus, it will be an independent body.

If the assessee is dissatisfied with the standard allowed by the Board of Referees, he may apply to the Central Board of Revenue for an adequate increased standard, but not exceeding the statutory percentage on capital employed in business, unless some specific cause peculiar to business is shown.

The Central Board of Revenue can also give relief in the case of any business, where owing to the existence of special circumstances, it would be inequitable to fix the standard with reference to the standard period as laid down in the Act.

CAPITAL EMPLOYED.

Having determined the standard profits, the next step is to examine the average capital employed during the chargeable accounting period as compared with the capital employed during the standard period. For, an increase of profits due to the increase of capital employed must be eliminated, if the comparison between the two periods is not to be vitiated.

The Act enacts therefore that if the average capital during the chargeable accounting period has increased over that employed during the standard period, the standard profit must be increased by 8 per cent. in case of body corporate, and 10 per cent. in other cases, of such increase reflected. If instead of there being an increase during such period, there is actually a decrease, then the standard profits have to be reduced by 6 per cent. of such decrease in all cases. The increase or decrease is to be computed by reference to the above statutory percentage, and not the percentage of profits actually earned on capital employed in the business.

After the adjustments to the standard profits have been made as above, the length of the chargeable accounting period is to be examined. If it is less than one year, the standard profits, must accordingly be reduced proportionately, so as to equal to the length of the chargeable period.

It must be remembered that where a taxpayer adopts either the minimum standard or the capital percentage standard, no adjustments can be allowed for fluctuation of capital during the standard and the chargeable periods.

DEFICIENCY.

Just as the comparison between the profits of the chargeable accounting period and the standard period might result into excess where the profits of the chargeable period are more than those of the standard period, there may also be a deficiency if the profits of the chargeable period are less than those of the standard period or it may also be that during the chargeable period there might not be any profits at all, but a loss. The Act provides that deficiency shall be computed as under :—

- (1) Where profits have been made in the chargeable accounting period, the deficiency shall be the amount by which such profits fall short of the standard profits.
- (2) Where a loss has been made in the chargeable accounting period, the deficiency shall be the amount of the loss added to the amount of the standard profits.

To the extent of such deficiency, profits chargeable to the previous accounting periods shall be deemed to be reduced by the amount of such deficiency and the amount of excess profits tax payable in respect thereof shall be deemed to be reduced accordingly and the relief necessary to give effect to the reduction shall be given by repayment or adjustment against future tax payable. Where the deficiency exceeds the previous aggregate excess profits, the balance of deficiency shall be carried forward and applied in reducing profits for the next subsequent chargeable period. If in the previous year there were no profits, then the whole of the deficiency will be carried forward to the subsequent year's accounts until exhausted.

The deficiency, it must be noted, must be carried forward to the credit of the same business. And, therefore, if after deficiency is made, the business changes hands, the deficiency relief is lost, except in one instance. Where change consists in the change in the constitution of the firm due to death of one of the partners, the surviving partners can avail themselves of the deficiency relief inspite of the change occurring in the constitution of the firm. If the change in the constitution is due to retirement or taking in of a new partner, the deficiency relief is lost to the successors.

BUSINESS LIABLE.

Excess Profits Tax is, as we have seen from the preamble, applied to businesses. Let us now consider what businesses fall within its scope and what businesses fall without it.

Business includes, under the Act, any trade, commerce or manufacture or any adventure in the nature of trade, commerce or manufacture or any profession or vocation, but does not include a profession carried on by an individual or by individuals in partnership if the profits of the profession depend wholly or mainly on personal qualifications. But where profession consists wholly or mainly in the making of contracts on behalf of other persons or the giving to other persons of advice of a commercial nature in connection with the making of contracts, it is taxable. Accordingly profits of a profession of a doctor, an accountant, a solicitor are excluded from the operation of the Act, but not so the profession or business of an insurance agent, stock-broker, estate broker, auctioneer, etc.

If the business is that of a company or a society incorporated by or under any enactment, whose functions wholly or mainly consist of holding of investments or property, inspite of the fact that under Income Tax Act such income may not be regarded as business income, the holding of such investments or property shall be deemed for the purpose of the Excess Profits Tax to be business.

The only exception provided is the business of a life assurance company, the profits of which have been expressly excluded from the operation of the Act.

All businesses carried on by the same person shall be treated, for the purposes of the Act, as one business.

SUCCESSION AND AMALGAMATION.

Under the Excess Profits Tax Act, a complete change of ownership of a business operates as the discontinuance of the business and the setting up of a new business. There are certain exceptions provided to this rule, *viz.* :

(a) **Partnership.**—In case of a change occurring before 1st September 1939 in the constitution of the firm due to death, retirement or admission of a new partner, the persons carrying on the business after the change may apply to Excess Profits Tax Officer within the prescribed time that they elect that, for the purposes of the provisions of this Act relating to the computation of Standard Profits, the business shall not be deemed to have discontinued.

(b) **Change on or after 1st September 1939.**—In the case of any change in the persons carrying on a business occurring on or after 1st September 1939, the Standard Profits of the business in relation to any chargeable accounting period are to be computed as though no change had occurred ; in particular, in computing the capital employed in the business after the change, no regard is to be had to any consideration given in respect of the business or any of the assets on the occasion of the change. This is to frustrate arrangements for the sale of business to another person or Company for a very large consideration, so as to enable such a person or a company to claim and obtain percentage Standard higher than the appropriate profits standard.

(c) **Amalgamation.**—When on or after 1st September 1939 two or more businesses amalgamate, the resultant business succeeds to the Standard profits of the amalgamated businesses. For the purpose of computing the Standard Profit, the resultant business will be treated as though it had been in existence throughout the period during which any of the former businesses had been in existence. The profits and losses and the capital employed in such former businesses will be treated as those of the resultant business ; the assets of the former businesses will be dealt with as if they had become assets of the resultant business when they were acquired by the former business ; and no regard will be had to the consideration passing for the businesses or the assets on the occasion of the amalgamation.

(d) **Sale of part of Business.**—Where on or after 1st September 1939 part of a business is transferred as a going concern, the part transferred and the part not transferred are each to be deemed, for purpose of computation of Standard Profits, to be a continuation of the original business, and the provisions as to the computation of Standard Profits and those relating to amalgamation as referred to above will apply subject to any necessary modifications.

For this purpose, such apportionments may have to be made of the profits and losses and of the capital and assets of the original business as may appear to the Excess Profits Tax Officer, or on appeal to the Board of Referees, to be just.

The result of this will be that the two businesses together will share between them the Standard Profits of the former single business.

(e) **No Substantial Difference following Change.**—Where a business was carried on immediately before 1st April 1936, and, between that date and 1st September 1939, it or its main part was transferred to another person, such latter person may apply to the Excess Profits Tax Officer, and if the E. P. T. Officer is satisfied that the business after the transfer was not substantially different from the business or part transferred, he shall treat the transferee person as if he had carried on the business as from its commencement for the purpose of computation of Standard profits, subject to such modifications (including modifications in respect of computation of capital) as he may consider just.

INTER-CONNECTED COMPANIES.

A company is deemed for Excess Profits Tax purpose to be a subsidiary of another company if and so long as not less than 9/10ths of the ordinary Share capital of the first company is owned by the other company, whether directly or indirectly, or partly directly or partly indirectly ; *indirect holdings must be through another company or companies.* It is the holding of the ordinary share capital which makes one company a subsidiary of another.

By ordinary share capital is meant all the issued share capital (by whatever name called) of the company, other than capital the holders whereof have a right to a dividend at a fixed rate, but have no other right to share in the profits of the company.

As between such companies, where any interest, annuity or other annual payment or any royalty or rent is paid by one company to another, such interest, etc., and any debt in respect of which such interest is payable, will be ignored, and any asset in respect of which any such royalty or rent is payable will be treated as being the property of the company making the payment.

The provisions as to combination of inter-connected companies apply in relation to a chargeable accounting period, where

(a) the principal company is resident in British India and is not a subsidiary of any other company resident in British India ; and

(b) during the whole or any part of the chargeable accounting period of the principal company another company, whether or not resident or carrying on business in British India, is a subsidiary company of such principal company.

Distinction is to be made between :

(a) The case of a subsidiary company which is a subsidiary throughout the chargeable accounting period ; and

(b) The case of a subsidiary, during part only of the chargeable accounting period.

In the first case, the capital employed in and the profits and losses arising from the business of the subsidiary companies in the chargeable accounting period are to be treated for Excess Profits Tax purposes as though these were part of the capital profits, and losses of the business of the principal company.

Thus, the Profits Standard of the subsidiary company and the capital employed will be separately computed in the first place, and the resulting figures added to the corresponding figures of the principal company.

In the second case, the excess or deficiency of profit of the subsidiary company in the chargeable accounting period is to be computed and so much of such excess or deficiency as is attributable to that part of the period during which the company is subsidiary is to be treated as increasing or decreasing, as the case may be, the excess or deficiency of the principal company for the whole period ; the remaining part of the excess or deficiency will be treated as the excess or deficiency of the subsidiary company. The excess or deficiency of the subsidiary company is that computed in relation to its own standard profit ; similarly with the Principal Company.

COMPUTATION OF PROFITS.

Profits for purposes of the Act have been defined as profits as determined in accordance with the First Schedule of the Act, which laid down rules for the computation of profits for the purposes of Excess Profits Tax.

The profits have to be computed on the income tax principles, *i.e.*, on the same principles on which profits of a business are computed for the purpose of income tax under Section 10, subject to the adaptations provided in the above Schedule of Rules. Losses are to be computed for Excess Profits Tax purposes on the same manner as profits.

Profits of the standard period which have already been determined for income tax purposes, shall, subject to adjustments required in the Schedule, be taken as profits during that period.

Where the standard or the chargeable period is not an accounting period, the profits and losses of the business shall be computed as aforesaid and the apportionment shall be made to specific periods in proportion to the number of months or fractions of months, unless the Excess Profits Tax Officer, having regard to any special circum-

stances otherwise directs. Where the Standard period includes any period during which Burma was part of British India, in computing the standard profits of a business, they shall be excluded from the profits of the business during the standard period so much of such profits as arose or accrued or were received in Burma, unless such profits are also included in the profits of the business during the chargeable accounting period.

The adaptations provided by the Schedule are as below :

1. Carry Forward of Loss.—Under the recent Income-tax Amendment Act, losses incurred by a business are allowed to be carried forward to next year's accounts and set off against next year's profits of the same business. This is not allowed under the Excess Profits Tax Act. The reason seems to be that as we are considering profit made in each year by itself, any adjustments due to profits or losses which went before the year must necessarily be ignored, if the comparison is not to be vitiated by extraneous circumstances.

2. Carry Forward of Depreciation.—Under the Income-tax Act, the depreciation allowance of one year, if it cannot be wholly set off against that year's profit, owing to the profits being very small or there being no profits, can be carried forward to be set off against the next year's profit and can form part of next year's depreciation allowance. For the purpose of Excess Profits Tax, this is also ignored, for the same reason as explained above.

3. Investment Income.—Excess Profits Tax is charged on Excess Profits of a business. It is levied on business income and not on investment income. Therefore, any investment income forming part of profits must be omitted.

This exemption does not extend to investment incomes of businesses like banking, assurance, or holding companies. These are specifically made taxable, for the reason that in their business, holding of investments is an integral part of the business and can, therefore, be regarded as part and parcel of the main business.

Where profits of a subsidiary company are included in the profits of the principal company for the purposes of assessment to Excess Profits Tax, dividends from the subsidiary company out of such profits shall not also be included in the profits of the principal company. This provision is made with a view to avoid double taxation of the same profits ; once as profits of the subsidiary and again as dividends of the principal company.

4. Bank Loan and Debentures.—If at any time after the close of the Standard period, any increase in the capital employed in a business has been effected by means of a loan from a bank carrying on a *bona fide* banking business or by means of a public issue of debentures secured on the property of the company, the interest on so much of the loan or debentures as has been utilised in effecting the increase in the capital shall not be deducted in computing the profits for the purpose of Excess Profits Tax and, notwithstanding the provisions of Rule 2 Schedule II, the amount of such loan or debentures shall not be deducted in arriving at the amount of capital employed in the business.

5. Property Income.—In case of a business which consists wholly or partly in letting out property on hire, the income from property will be liable to Excess Profits Tax although for Income-tax purposes this is not regarded as business of the persons holding the property and the income is not so taxed under Section 10 of the Indian Income-tax Act. Mere ownership of a property by an individual does not make him liable to Excess Profits Tax in respect of such property income, unless his main business is holding of properties and earning income therefrom.

6. Borrowed Money.—Investment income, as above, is to be omitted from the computation of Excess Profits Tax. In such a case, where investment income is omitted, interest on borrowings to that extent must be reduced. Otherwise, the effect would be that the taxpayer secures a double advantage; once by securing exemption from investment income, and secondly, from the reduction of assessable excess profits by full deduction of interest on borrowed money. The rule provides, therefore, that only such interest will be allowed on the balance of borrowed money as remains after deducting the value of investment from the principal sum owing. This applies only to companies other than banking, insurance and investment companies, and does not apply to individuals, unless his investments are charged as security for the sum borrowed; not otherwise.

7. Taxes.—Any income tax, Super-Tax and Excess Profits Tax paid is not allowed to be deducted.

Excess Profits Tax is nevertheless deductible from profits assessable to income-tax and super-tax.

There shall also be so deducted Excess Profits Tax payable under any law in force in a country outside British India on the profits of the business in respect of any chargeable accounting period to the extent that such profits arise in the said country, after deducting any relief by repayment, or set off or otherwise obtained in that country.

8. Directors' Remuneration.—In companies where directors have a controlling interest, directors' fees in excess of those paid during the Standard period cannot be allowed to be charged for the chargeable accounting period. This is simply to prevent reduction of excess profits, by artificially reducing the profits by payment of large amounts as directors' fees, particularly because of their controlling voice in the company. In a public company or companies where directors do not have such controlling interest, no restriction is placed by the Act on payment of directors' fees, for the simple reason that such fees cannot be voted, except with the consent of the other independent shareholders.

The question of directors' fees arises only where standard profits are computed with reference to a standard period. In regard to Standard profits computed on the basis of a percentage of Capital employed in a business during the chargeable accounting period no deduction for directors' fees can be allowed.

The expression directors' remuneration does not include :—

- (1) The remuneration of any director who is required to devote substantially the whole of his time to the service of the company in a managerial or technical capacity and is not the beneficial owner of or able either directly or indirectly or through the medium of other companies or by any other direct means to control more than 5 per cent. of the ordinary share capital of the company, and
- (2) The remuneration paid to a Managing Agent where such remuneration is included in the profits of the Managing Agent's business for the purpose of Excess Profits Tax.

A director includes a manager or a person concerned with the management of a business, who is remunerated out of the funds of the business and is the beneficial owner of not less than 20 per cent. of the Ordinary share capital of the business. He may not necessarily be styled a 'Director.'

9. Managing Agent's Remuneration.—Further, Managing Agents' remuneration allowed as deduction cannot exceed the amount which would have been payable to the Managing Agent if the agreement in force in the standard period had been in force in the chargeable accounting period except where such remuneration is subjected to Excess Profits Tax in the hands of the Managing Agent.

10. Long Period Contracts.—Where the performance of a contract extends beyond the accounting period, such proportion of the entire profit or loss, which has resulted or which it is estimated will result from the complete performance of the contract, is to be attributed to the accounting period as is properly so attributable, having regard to the extent to which the contract was performed therein. If, when such contract is completed and the profits have been finally ascertained, the aggregate of the amounts attributed to previous accounting periods exceeds the profits as finally ascertained on the complete performance of the contract, an adjustment shall be made to reduce the amounts so attributed to the various chargeable accounting periods to the amount of the profits as finally ascertained.

11. Special allowance on Buildings.—Where any building erected on or after 1st September 1939 has ceased to be required for the purpose of business or has been sold, then any amount by which the value of the buildings at the date when it ceased to be required for the purposes of the business, or the price obtained for the buildings as the case may be, which falls short of the written down value of the building shall be allowed as a deduction in arriving at the profits of that chargeable accounting period.

12. Artificial Transactions.—With a view to provide against any avoidance of tax by manipulation or putting through artificial transactions, the Act has provided that such transactions shall be treated as null and void. An artificial transaction or operation includes any device of whatever nature adopted for the purpose of presenting the accounts of a business in a misleading form or manner with intent to evade or having the effect of evading any obligation imposed by this Act. There is also attached to any such action a penalty. The Excess Profits Tax Officer may, with the previous approval of the Inspecting Assistant Commissioner, direct that in addition to any Excess Profits Tax for which an assessee is or would, but for such transaction or operation, be liable, a penalty not exceeding the tax evaded or sought to be evaded shall also be paid. The definition is in very wide terms indeed, embracing even transactions which may have been legally undertaken for reduction of Excess Profits Tax.

DOUBLE EXCESS PROFITS TAX RELIEF.

Lest a person who having business income abroad, say in United Kingdom on which he will pay Excess Profit Tax should also be saddled with Excess Profits Tax on the same profits in India the Act has provided Double Excess Profits Tax Relief. A provision is made for relief by a notification which might be given, provided there is a corresponding relief obtainable in such countries, *i.e.*, United Kingdom, Indian States or other parts of His Majesty's Dominions. It, therefore, excludes countries outside the British Empire.

In England, National Defence Contribution is regarded as a form of Excess Profits Tax. Therefore, it is provided that if instead of Excess Profits Tax, National Defence Contribution is paid by a business in the United Kingdom, such National Defence Contribution to the extent of Excess Profits Tax would be regarded as Excess Profits Tax and would be entitled to relief exactly as if Excess Profits Tax had been paid. The reason for this amendment is that, in England, either Excess Profits Tax or National Defence Contribution, whichever is the greater, is payable by an assessee for the period, 1st April 1939 to 31st March 1942, when both are in force.

Thus, if National Defence Contribution is paid in the United Kingdom and Excess Profits Tax is paid in India, on the profits of the same business in the absence of the above specific provision, no relief would arise, although according to the English Act, National Defence Contribution is a form of Excess Profits Tax. Further, if the laws of any country do not provide any reciprocal relief from Excess Profits Tax, the assessee

in British India will be entitled, like income-tax, to a relief equal to one-half of the Indian Excess Profits Tax or the Excess Profits Tax payable in the said country, whichever is less.

COMPUTATION OF CAPITAL.

It must have been noted that for purpose of Excess Profits Tax computation, not only profits have to be computed, but also average capital employed in business has also to be determined. Accordingly Schedule Two of the Act provides rules for computing the average amount of capital.

1. Valuation of Assets.—For the purpose of computation of average capital, actual capital and accumulated reserves are to be ignored. Capital has to be computed with reference to assets minus the liabilities, and in so doing assets have to be valued on fixed basis.

So far as it consists of assets acquired by purchase on or after the commencement of the business, the price at which those assets were acquired, subject to the deductions hereinafter specified.

So far as it consists of assets being debts due to the person carrying on business the nominal amount of these debts, subject to the said deductions.

So far as it consists of any other assets which have been acquired otherwise than by purchase as aforesaid, the value of the assets when they became assets of the business, subject to the said deductions.

2. Written-down Value.—The price or value of any assets other than a debt shall be subject to such deductions for depreciation as are necessary to reduce the amounts to its "written-down value" as defined by Sec. 10 (5) of the Indian Income-tax Act. According to this, it means :

- (a) In the case of assets acquired in the previous year, the actual cost to the assessee ;
- (b) In the case of assets acquired before the previous year, but after the commencement of the Indian Income-tax (Amendment) Act, 1939, the actual cost to the assessee less all depreciation allowable to him under this section ;
- (c) In the case of assets acquired before the commencement of the Indian Income-tax (Amendment) Act, 1939, the actual cost to the assessee less for each financial year since acquisition the amount of depreciation applicable to the assets at the rates in force for each such year since the 1st day of April, 1922, and at the rates in force on the 1st day of April, 1922, for each such year prior to that date.

Provided that where the provisions of the proviso to sub-section (2) of section 26 of the Indian Income-tax Act are applicable, the actual cost to the assessee referred to in clauses (a), (b) and (c) shall be the actual cost to the person succeeded in the business, profession or vocation.

Provided further that, there shall not be so deducted from the actual cost any depreciation allowance or part of any depreciation allowance which was due for a year which ended prior to the 1st day of April, 1939, but to which full effect was not given owing to the absence of profits or gains chargeable for that year, or owing to the profits or gains so chargeable being less than the allowance.

This enables companies with any considerable amount of unabsorbed depreciation allowance to increase the written-down values of the assets by such unabsorbed depreciation to claim a larger amount of depreciation therein.

Further, depreciation during both the Standard Period and the Chargeable accounting period is to be on the written-down value basis as obtains under the Indian Income-tax (Amendment) Act, notwithstanding that the Amendment Act was not in force during the Standard period.

3. Borrowed Money.—Any borrowed money and debts shall be deducted. For the purpose of computation any debt for income-tax or super-tax or for excess profits tax shall be deducted whether such debt has been or has not then become due. If there is a deficiency due it shall be regarded as an asset of the subsequent chargeable accounting period.

4. Investments.—Any investments income whereof is ignored for purpose of computation of profits and any moneys not required for the purpose of business shall be left out of account. But where investments are in the beneficial ownership of the person carrying on business, the value of the investment must be deducted from the principal so borrowed. This is so, if the person carrying on the business is a company. If it is an individual or a firm, then investments are not to be deducted unless the same are pledged as security for sums borrowed and not otherwise.

5. Treatment of Accruing Profit and Loss.—In computing the average capital employed, profits and losses shall be deemed to have accrued at an even rate throughout the period and shall be deemed to have resulted in a corresponding increase or decrease, as the case may be, in the capital employed in the business. Where part only of a business is liable to Excess Profits Tax, the capital employed in that part shall be computed separately from any other capital of the person carrying on the business.

The reason why the capital is to be computed with reference to the excess of liability is that the amount standing to the credit of the capital account of a firm or company cannot usually be taken without adjustment, since that capital represents the value of all assets less all the liabilities, and all of these may not be employed in or arise out of business as such. Moreover, the value recorded in books may be over or under-estimated, and as a matter of equity between tax-payers, all must be brought, as far as possible on the same basis.

ADMINISTRATION OF THE ACT.

For the administration of the Act provisions, similar to Income-tax Act have been made in regard to the profits escaping assessment, rectification of mistakes, penalties, appellate procedure and reference to High Court. Returns under the Excess Profits Tax are not made compulsory as under the Income-tax Act. Under the Excess Profits Tax, a notice of the return will have to be served upon persons whom the Income-tax Officer believes to be engaged in any business liable to Excess Profits Tax during any chargeable accounting period to furnish him with the return of the profits of the business and the standard profits as computed under the Act, within 60 days of the service of notice. As the Tax is leviable on business, it has been provided that the Excess Profits Tax shall be payable by a person carrying on business and where two or more persons are carrying on business jointly in the chargeable accounting period, the assessment shall be made jointly and in case of partnership, it may be made in the partnership name. The provision of taxing individual partner on his share of partnership profit, as in case of registered firm, does not apply to Excess Profits Tax.

A Brief History of Government Securities.

By JAYANTILAL RATILAL TRIVEDI, Esq.
(Partner, Messrs. Chugondas & Co., Dealers in Government Securities.)

J. R. Trivedi, Esq.

Mr. Jayantilal R. Trivedi is a Partner in Chugondas & Co., Director, Devkaran Nanjee Banking Co., Ltd., Devkaran Nanjee Printing & Publishing Co., Ltd., Bombay, and the Shrimali Shubhechhack Publishing Co., Ltd., Ahmedabad.

GOVERNMENT Securities form the principal part of the Public Debt of any country. As far as India is concerned, it will be interesting to relate exactly how they came into existence. In their present form

they are really the outcome of the debt owed by the East India Company. Incidentally, this debt was of two kinds, Rupee debt in India and Sterling debt in London. In the beginning, the Company experienced some difficulty in obtaining loans from India and therefore they usually borrowed from the British Government or the Bank of England. But, as the Government began to be more stabilised in India, they were able to obtain money with ease resulting in frequent borrowings in India.

These loans at first bore interest at the rate of 5 per cent. but with the increasing stability of the Company's power and peace and good Government which followed therefrom, it was found possible in the fifth decade of the 19th century to obtain any money they required on a 4 per cent. basis. The then existing 5 per cent. loans were accordingly discharged, the holders of these loans being allowed from time to time the option of transferring into 4 per cent. loans. Subsequently, when the Government of India had been taken over by Queen Victoria, it was found possible to raise money at 3½ per cent. and, in consequence, notice of discharge of the then existing 4 per cent. loans was given, the holders of these loans being allowed the option of transferring into 3½ per cent. loans. These transfers took place chiefly in the year 1894

Origin of 3½% G. P. Loans.

and thus we have the origin of the now famous 3½ per cent. Non-terminable loans. Actually, when the above 3½ per cent. loans were formed, an undertaking was given that they would not be redeemed before 1st August 1904 and, subsequent to that date, not without 3 months' notice. As these guaranteed terms expired, they came on a 3 months' notice basis, and their redemption now at any time is a contingency which has long since passed from the mind of the public. These 3½ per cent. loans of various years form the main part of India's present Public Debt and can veritably be described as the Indian "Consols."

In 1896, money was easier still and so a 3 per cent. loan was floated on the same terms and two existing 3½ per cent. loans were discharged.

3% G. P. Loans.

Shortly after this, money began to get dearer and for some years this 3 per cent. loan steadily declined until in 1908, the holders thereof were allowed to exchange their holdings into a 3½ per cent. loan of 1900-01 in the ratio of 7 to 6. Even to this day, this option exists. For this reason the 3 per cent. Loan is usually quoted six-sevenths of the price of the 3½ per cent. non-terminable loan. Subsequent to the year 1900, loans bearing 3½ per cent. rate of interest were issued every year till 1914 at varying prices, but all these are commonly known as the 3½ per cent. Loan of 1900-01. These loans too were guaranteed not to be discharged up to 31st December 1920 and then also not without three months' notice.

* In compiling this article reference has been made to Prof. K. T. Shah's "Sixty Years of Indian Finance", Prof. C. N. Vakil's "Financial Developments in Modern India", Mr. D. L. Dubey's "Indian Public Debt" and Reports of the Controller of Currency and Reserve Bank of India (J. R. T.).

The first issue we had of a terminable loan was during the last Great War. In 1915, a small loan of Rs. 4½ crores bearing interest at 4 per cent. was put on the market at par, redeemable on 30th November 1923. The Government reserved the right to redeem the loan or any part of it at any time on or after the 30th November 1920 on giving 3 months' notice. The important feature about this issue was the fact that it was the first occasion when the public were allowed to subscribe through the Post Office. In 1916, another loan of 4 per cent. was issued at par, redeemable between 1931 and 1936. This loan was commonly known as the 4 per cent. Conversion Loan of 1916-17 as subscribers to it obtained the privilege, subject to certain conditions, of converting their 3½ per cent. and 3 per cent. Rupee Securities into Securities of this new loan. Here again, provision was made for allowing the public to subscribe through the Post Office, but the response was not so good as in the case of the 1915 loan.

In 1917, the Government of India agreed to contribute the very large sum of £100 million to the British Exchequer towards the prosecution of the War. In order to raise money for this purpose, the Indian War Loans of 1917 and 1918 were issued. The 1917 issues were in two forms, a comparatively long-dated 5 per cent. taxable issue of 1929-47 and also 3 and 5 year income-tax free bonds bearing interest at 5½ per cent. A special feature of the 1929-47 War Loan was the provision made for a Sinking Fund for the first time in the history of Indian Government Securities. By this, the Government undertook to set aside annually a sum equal to 1½ per cent. of the amount of the loan to form a fund to be utilised for the purchase of the Securities of this loan whenever its market price fell below its issue price of Rs. 95. In this case also, subscriptions were allowed through the Post Office and it must be mentioned that the procedure was more popular. Another feature of interest connected with this period was the introduction of the now popular Post Office Cash Certificates. The 1918 issues took the form of 4 different income-tax free Bonds bearing interest at 5½ per cent. and maturing after 3, 5, 7 and 10 years respectively.

In the subsequent years, the Government of India floated further loans mainly in order to reduce their short term liabilities by the conversion of War Bonds and partly to enable them to repay the maturing War Loans. In 1919, a comparatively long-term income-tax free Loan repayable 1945-55 was issued at Rs. 95. In subscription to this loan, War Bonds of every series were accepted at par as the equivalent of cash. As in the case of the 5 per cent. War Loan of 1929-47, an arrangement was made for a Sinking Fund for this loan on the same terms. A special feature of interest in connection with it was that the Government gave an undertaking that no future issue of the loan would be made at a price below Rs. 95 which was its issue price. In 1920, the 5 per cent. income-tax free Loan of 1945-55 was reopened for subscription at Rs. 95 and there was a simultaneous issue of 6 per cent. Income-Tax Free Bonds repayable in 1930. War Bonds maturing in 1920 and 1921 were accepted at par in subscription to the latter issue. In 1921 and 1922, five and ten year income-tax free Bonds bearing interest at 6 per cent. were issued and the maturing War Bonds were accepted at par in subscription to them. In the years 1923 and 1924 further issues were made of the 5 per cent. income-tax free Loan of 1945-55 at Rs. 96 and Rs. 99 respectively. There were also simultaneous issues in both years of income-tax free Bonds bearing interest at 5 per cent. at Rs. 97 in 1923 and Rs. 98-4 in 1924, both repayable at par in 1933. The practice of receiving subscriptions through the Post Office was discontinued from the year 1924. The year 1925 is noteworthy particularly because no cash subscriptions were invited to the Rupee Loan of that year, but the holders of early maturing Bonds were given the option of converting their holdings, under certain conditions, into the already existing 5 per cent. income-tax free Loan of 1945-55 or into a new taxable issue of 5 per cent. ten year Bonds repayable 1935. It is also important that from this year the practice of

**5 % Tax free Loan
1945-55.**

**6% Tax free
Bonds.**

**5% Tax free
Bonds 1933.**

**Discontinuance of
Tax-free Loans.**

5% Bonds 1935.

income-tax free Loan of 1945-55 or into a new taxable issue of 5 per cent. ten year Bonds repayable 1935. It is also important that from this year the practice of

issuing tax-free loans was discontinued and no tax-free loan has since been raised to this day. The year 1926 is remarkable for the fact that a bold attempt was made for the first time in the post-War period to reduce the heavy interest charges recurring every year by issuing a loan of long maturity at a comparatively lower rate of interest. This loan was issued

4% Loan of 1960-70. at Rs. 88 bearing taxable interest at 4 per cent. repayable at par in 1960-70. Subscriptions to this loan were received in cash,

in 6 per cent. Bonds 1926, 6 per cent. Bonds 1927 or $5\frac{1}{2}$ per cent. War Bonds 1928. These Bonds were accepted at Rs. 101, Rs. 102-4 and Rs. 106-8 respectively as equivalent of cash in subscription to the loan. Facilities for conversion were also afforded to investors who had deposited their holdings with the Accountant General, Posts and Telegraphs. There were several factors which brought about conditions favourable for the successful floatation of this loan. Money was easy, there had been a good rise in the price of existing securities, this being aided by the institution of a monthly settlement on the Bombay Stock Exchange which brought a strong speculative element into the Government Securities market. It was a coincidence that this speculation reached its height just about the time the loan notification was issued and three or four days later, the new loan was quoted freely at a premium of Rs. 3 as a result of heavy speculative forward buying. However, before the loan actually opened for subscription, many speculators found themselves in difficulties and there was subsequently

4% Loan 1934-37. a slump. The Rupee Loan of 1927 took the form of a 4 per cent. taxable issue repayable at par in 1934-37, the issue price being Rs. 94-8. In this case 6 per cent. Bonds 1927 at Rs. 106-4 and $5\frac{1}{2}$ per cent. Bonds 1928 at Rs. 112 were accepted in conversion as equivalent of cash. The Rupee loan of 1928

$4\frac{1}{2}$ % Loans 1955-60 and 1934. consisted of two series both bearing interest at $4\frac{1}{2}$ per cent. (1) a comparatively long-dated loan repayable in 1955-60 and issued at Rs. 94 and (2) short-term Bonds repayable in 1934 and issued

at Rs. 97-8. $5\frac{1}{2}$ per cent. War Bonds 1928 were accepted at their redemption rate of Rs. 105 in subscription to both these issues. In 1929, a 5 per cent. loan was issued at Rs. 96-8 repayable at par in 1939-44.

5% Loan 1939-44. The 6 per cent. Bonds 1930, 1931 and 1932 were accepted in subscription to it at Rs. 102, Rs. 103-2 and Rs. 104-2 respectively. In connection with this loan the Government of India undertook to set aside annually a sum equal to $1\frac{1}{2}$ per cent. of the amount of the loan outstanding at the end of the preceding year to form a Depreciation Fund, to be used for the purpose of purchase for cancellation of the securities of the loan whenever its market price fell below its issue price of Rs. 96-8, with the proviso that if at the end of any year the balance standing to the credit of the Fund was more than 5 per cent. of the amount of the loan then outstanding, the surplus could be used for the purchase of other Government Securities in the market which stood below their respective issue prices. Besides, this loan carried the privilege of being accepted at its issue price of Rs. 96-8 as the equivalent of cash in subscription to any future loan having a currency of 10 years or more and maturing after 15th July 1944. Simultaneously, a further issue of 5 per cent. Bonds 1935 was made at Rs. 98 and tenderers of 6 per cent. Bonds 1930 were allowed, if they desired, to convert at Rs. 102 a proportion into this loan, not exceeding one-half of the total amount tendered.

In 1930, 6 per cent. Bonds repayable 1933-36 were issued at par and 6 per cent.

6% Bonds 1933-36. Bonds of 1930 were accepted in subscription. An interesting feature of this loan was the very large number of applications received from small investors, i.e., applications for sums of Rs. 10,000 and less. In 1931, a loan in the form of Treasury Bonds repayable 1935

$6\frac{1}{2}$ % Treasury Bonds 1935. and bearing interest at $6\frac{1}{2}$ per cent. was issued. The price was Rs. 100 during the first week of the issue and thereafter it increased by two annas every week, the weekly increase representing the amount of interest that accrued weekly on the bonds. The 6 per cent. Bonds of 1931 were accepted in subscription at their full maturity value. In order to attract subscriptions

rom small investors, the practice of receiving applications through the Post Office was revived during the year and the response was satisfactory owing to special efforts made in that direction. In 1932, two loans, *viz.*, 5½ per cent. 1938-40 and 5 per cent. 1940-43 were issued, both at Rs. 98. The 6 per cent. Bonds of 1932 were accepted in subscription to the former, while 5 per cent. Bonds 1933 and 6 per cent. Bonds of 1933-36 were accepted for the latter at Rs. 101-8 and Rs. 102-8 respectively. The Rupee Loan of 1933 consisted of 3 issues, *viz.* (1) A purely cash issue in the form of 4 per cent. Bonds repayable 1943 issued at Rs. 98 (2) A purely conversion issue in the form of a further loan of 4 per cent. 1960-70. Holders of 5 per cent. War Loan 1929-47, 5 per cent. Bonds 1933 and 6 per cent. Bonds 1933-36 were given the option of converting their holdings into an equal amount of this loan with a cash bonus of Rs. 7-8, Rs. 8-8 and Rs. 8-8 respectively. (3) A combined cash and conversion issue in the form of 3½ per cent. 1947-50 issued at Rs. 96. Subscriptions to the cash section were in the form of (a) Cash (b) 4 per cent. Conversion Loan of 1916-17 and 5 per cent. War loan 1929-47 accepted at par (c) 5 per cent. Bonds 1933 and 6 per cent. Bonds 1933-36 accepted at a premium of 12 annas. Subscriptions to the conversion section were in the form of 4½ per cent. Bonds 1934, 5 per cent. Bonds 1935 and 6½ per cent. Treasury Bonds 1935, accepted at Rs. 106-2, Rs. 108 and Rs. 111-8 respectively as equivalent of cash. The year was important because of the fact that the Government repaid the outstanding amounts of 5 per cent. 1929-47 Loan on 15th May, 4 per cent. Conversion Loan 1916-17 on 1st July and 6 per cent. Bonds 1933-36 on 15th August. In 1934, there was a further issue of the 3½ per cent. 1947-50 at Rs. 98-8 and also a short-term loan of 3 per cent. 1941 at Rs. 99. The 4½ per cent. Bonds 1934 and 4 per cent. Bonds 1934-37 were accepted in subscription to the former, while 4½ per cent. Bonds 1934 were accepted for the latter. It is interesting to note that a loan bearing a nominal rate of interest at 3 per cent. was issued for the first time since the year 1896. The entire amount of 4 per cent. Bonds 1934-37 was repaid during the year. In 1935, a 3 per cent. loan of 1951-54 was issued at Rs. 96-8, and 5 per cent. Bonds of 1935 at Rs. 100-7 and 6½ per cent. Treasury Bonds 1935 at Rs. 100-11 were accepted in subscription. In 1936, although the Government had no loans to repay during the year, they decided to take advantage of the exceptionally favourable conditions that prevailed in the money market and issued at par a loan of 2¾ per cent. repayable in 1948-52. This was the first occasion in the history of the Government of India loans when a loan below a 3 per cent. rate of interest was issued, and that too at par. There was no loan in the financial year 1937. In the year 1938, a combined cash and conversion loan with a comparatively long term maturity of 1963-65 was issued at Rs. 98, 5½ per cent. Loan 1938-40 at Rs. 101-12 and 5 per cent. Loan 1939-44 at Rs. 104 were accepted in subscription. The outstanding amount of 5½ per cent. 1938-40 was repaid. In 1939, a further issue of 3 per cent. loan 1963-65 was made at Rs. 98, and 5 per cent. 1939-44 at Rs. 100-6 and 5 per cent. 1940-43 at Rs. 104 were received in subscription. The outstanding amount of 5 per cent. 1939-44 loan was repaid.

The following table summarises all the foregoing information and it will be seen that the highest rate of interest which had to be paid was 6½ per cent. in 1931, from which level, owing to easier money conditions, it gradually declined to 2¾ per cent. in 1936.

RUPEE SECURITIES

Year of Issue.	Loan.	Date of Redemption.	Issue Price.	Amount Raised.	REMARKS.
1894	3½% of 1842-43 3½% of 1854-55 3½% of 1865 3½% of 1879	Repayable at the option of Government at any time after August 1904, on 3 months' notice.	Rs. ..	Rs. (in thousands.)	Converted from the then existing 4% Loans of the respective years.
1896	3%	Repayable at the option of Government at any time after December 31, 1916, on 3 months' notice.	..	9,00,00	5 crores realised on conversion of 3½% C. P. Notes of 1853-54 and 1893-94. Convertible into 3½% Paper of 1900-01 in the ratio of 7 to 6.
1900-12	3½% of 1900-01	Repayable at the option of Government at any time after December 31, 1920, on 3 months' notice.	Many loans were issued at 3½% between 1900 and 1912, but all these are generally known as the 3½% Loan of 1900-01.
1915	4% of 1915-16	Repayable not before 30th November 1920 and not later than 30th November 1923, on 3 months' notice.	100	4,50,00	First terminable loan.
1916	4% Conversion Loan of 1916-17.	Repayable not before 1st October 1931 and not later than 1st October 1936, on 3 months' notice.	100	6,50,00	Subscribers to this loan obtained the privilege, subject to certain conditions, of converting their 3½% and 3% Rupee Securities into Securities of this Loan. Repaid on 1st July 1933.
1917	5% War Loan 1929-47	Repayable not before 15th August 1929 and not later than 15th August 1947, on 3 months' notice.	95	Arrangement made for Sinking Fund. The amount remaining unpaid at the end of 1932 was repaid on 15th May 1933.
1917	*5½% War Bonds 1920	15th August 1920

Since the above was written, the following loan has been issued :—

3% Defence Bonds 1946 : Issued from 1st August 1940 at par, with the price increasing by 9 pies per cent. weekly up to 31st January 1941. Repayable at Rs. 101% on 1st August 1946. 5% Loan 1940-43 was accepted at its full maturity value in subscription. Amount subscribed up to 31st August 1940 : Rs. 20,81,03,600.

So far we have given an account of the Rupee Securities of the Government of India. We have now to consider the Sterling Securities which are also of equal importance. In order to make good their deficits, the East India Company had to borrow from time to time, as already mentioned, either from the British Government or the Bank of England. On the transfer of the Government of India to the Crown, all the debt of the East India Company, both Rupee and Sterling, was taken over and an additional sum of £12 million had to be paid to the proprietors of the East India Stock. Up till this time, the debt in Sterling was comparatively insignificant. But thereafter, there have been regular borrowings mainly on account of the construction of the new, or for the purchase or liquidation of, specific Railways or for making advances to Railway Companies or for paying off existing Sterling Loans in order to reduce interest charges. Recourse had to be made to the London market owing to the comparatively lower rate of interest prevailing there, as also due to the fact that the Government of India had not been able to borrow large sums in India with ease in any single year. Between the years 1901-06, 3 per. cent. irredeemable Stock was issued every year, the highest subscription being £3 million in 1901 and the lowest £1½ million in 1902 and 1903. The policy of active Railway construction and the consequent heavy Sterling borrowings began in 1907, with the result that a higher rate of interest had to be paid on the loans from that time onwards. Between 1907 and 1910, there was an issue each year of 3½ per cent. irredeemable Stock, the total subscriptions for 4 years amounting to £27 million. The latter year is also important since it witnessed the first terminable loan for £4 million at 3½ per cent. This was repaid in eight annual instalments. There was no loan in 1911. In 1912, a further issue of 3½ per cent. irredeemable Stock was made for £3 million. There were no Sterling loans issued for many years after this, as the London market was almost entirely closed for outside borrowings on account of the Great War of 1914-18.

The immediate post-war years found the Government of India faced with the necessity of raising huge amounts which were required for the acquisition of and expenditure upon railways and for general purposes. Unfortunately, this necessity coincided with very tight conditions in the London money market and so, not only had a higher rate of interest to be paid, but recourse also had to be made to the policy of issuing terminable instead of non-terminable loans. The first post-war loan was issued in 1921 at par bearing the onerous interest of 7 per cent., redeemable in 1926-31. It also carried the privilege of conversion into 3 per cent. Stock and, if redeemed before 1931, promise of repayment at 102 per cent. There is no doubt that Government laid themselves open to the accusation that there was a serious error of judgment in the case of this issue considering that other Governments, despite the aforesaid tightness of the London market, were able to borrow at more favourable rates.

The reason adduced for offering such extravagant terms was that Government were anxious to make certain the success of the loan as it approached the London market not only after the lapse of many years, but at a very critical period in the Indian political and financial situation. Needless to remark, the loan was immediately oversubscribed on issue. £3.2 million of this loan was converted into £6.46 million 3 per cent. irredeemable Stock in 1922-23 and £2 million was converted into £4 million of the same stock in the following year. In December of the same year and in

5½% Bonds 1932.

1922, a loan of 5½ per cent. redeemable in 1932 was issued in each year, in 1921 for £10 million at £93½ and in 1922 for £12½ million at £96. In

Long-term Loans.

October 1922 and in the year 1923, a comparatively long-term loan bearing interest at 4½ per cent. and maturing in 1950-55 was issued for £20 million in each year, at £85 in 1922 and at £90 in 1923. No Sterling loans were raised from 1924 to 1927. In 1928 and 1929, a long-term issue of 4½ per cent. repayable in 1958-68 was raised in each year, in 1928 for £7½ million at £91½ and in 1929 for £10 million at £91.

In 1930, the following three stocks were issued : (1) a 6 per cent. £6 million loan at £99 repayable 1932-33 ; (2) a 6 per cent. £7 million loan at £99 repayable 1933-35 ; and (3) a 6 per cent. £12 million loan at par repayable in 1935-37. In 1931, two Stocks were raised, 5½ per cent. 1936-38 Loan for £17 million at £97 and 6 per cent. 1933-34 Loan for £10 million at par. In 1932, an issue of 5 per cent. Stock repayable 1942-47 was made for £10 million at £95 partly for the repayment of the maturing 6 per cent. Bonds. The year 1933 witnessed the issue of a medium-term loan at £97½ for £12 million bearing interest at 4 per cent. repayable at par in 1948-53 partly to provide funds for redemption of the outstanding balance of 6 per cent. 1933-35 Loan. Another issue, a comparatively long-dated one, bearing interest at 3½ per cent. redeemable in 1954-59 was made in the same year for £10 million at £97 to repay the 6 per cent. Bonds 1933-34. In 1935, a 3 per cent. Stock for £10 million repayable 1949-52 was made at £98 to repay the 6 per cent. Bonds 1935-37.

To summarise the foregoing, we give a table of the main details.

It must be stated here that the foregoing sterling loans were contracted by the Secretary of State in Council. But now, under the provisions of the Government of India Act 1935 and the East India Loans Act 1937 which came into force on 1st April 1937, the Secretary of State replaces the Secretary of State in Council in relation to these loans. Such debt is a liability of the Government of India and is secured upon the revenues of the Central and Provincial Governments. Any legal proceedings with reference thereto may be brought against the Secretary of State but the Exchequer of the United Kingdom has no liability in respect thereof. No deduction at source in respect of Indian taxation may be made from any payment of principal or interest in respect of such debt. Pending any constitutional changes in future, any sterling borrowings on behalf of the Government of India are to be undertaken by the Secretary of State within such limits as authorised by Parliament. In the exercise of these powers, the Secretary of State requires the concurrence of his statutory board of advisors. No such borrowing has taken place till this date.

Up to now we have touched upon the borrowings of the Government of India, but a brief reference must be made to the debt position of the Provincial Governments.

It was only after the Government of India Act of 1919 that the **Provincial Government Loans.** Provinces were empowered to raise loans in the open market.

Previous to that, this privilege was reserved for the Government of India. In exercise of this power, Provincial Governments have, on occasions subsequent to the passing of the Act, raised various loans for several reasons. It must be mentioned, however, that Provincial Governments may not borrow outside India without the consent of the Central Government and even in India they may borrow only subject to such limitations as may be imposed by the respective Legislatures. Also, the consent of the Central Government is required if the Province concerned is indebted to it. It is of interest to mention that a considerable part of debt owing by the Provinces to the Central Government was cancelled at the commencement of the new constitutional regime partly in order to afford relief from debt charges in particular cases and partly in return for the assumption by the Provinces of liabilities for certain balances and funds which were previously borne by the Central Government.

Before this review is concluded, a brief account must be given of the slow evolution of a fully organised and active market for these Securities. Records show that during the last quarter of the 19th century, business in Government

Marketing of Securities. Loans and other Trustee Securities was transacted freely in and between Calcutta and Bombay and Bombay and London. In writing on this particular subject the late Sir Shapoorji Broacha, the Grand Old Man of the Bombay Stock Exchange, remarked

that Bombay was the largest Rupee Paper market in India. He further mentioned that between the years 1880 and 1898 there was large arbitrage business done between Bombay and London in the then existing $4\frac{1}{2}\%$ Rupee Paper, which was ultimately repaid in 1894, and also in the 4% Paper. Subsequently, when the 4% Loans were converted into the $3\frac{1}{2}\%$ G. P. Notes, this large arbitrage business between the two centres continued in $3\frac{1}{2}\%$ Rupee Paper, and it was enhanced at that time on account of the fluctuations in exchange mostly downwards and London taking a liking to the Rupee Paper because of its day to day basis of interest calculation. As a result of these circumstances, the $3\frac{1}{2}\%$ G. P. Notes actually rose to the highest point of Rs. 111½. This arbitrage business remained in full swing until the end of 1898 when exchange became stable at 1s. 4d. per Rupee. Thereafter, a good deal of the speculative fascination disappeared and, as a result, the price tendency was downward. This was accentuated also by the issue of new Government and Corporation Loans every year. In spite of the gradually enlarging market for securities, the subject of Government Loans was one about which few had any knowledge, as business in them was mostly confined to leading banks, insurance companies and a handful of people directly interested. The masses were very largely habituated to hoarding whilst others with advanced views are said to have lacked confidence in the Government, particularly in regard to their general financial and currency policy. In order to encourage the investment habit amongst the masses, Government issued at par 'Stock Notes'

in 1882, in denominations of Rs. 12½, Rs. 25, Rs. 50 and Rs. 100. They bore interest at 4% payable annually, exempt from income-tax, and available at all Treasuries. They were transferable by simple delivery. Despite the attractive terms, the 'Stock Notes' proved a failure and in 1888 they were paid off or converted into Promissory Notes of Rs. 100 each. After this, no further effort was made to induce the masses to invest in loans until 1917, when, in order to obtain as much money as possible for the War loans, every expediency was adopted and a drive was organised to reach the slow moving ryot of even the remotest districts, with the result that some wide-spread interest was awakened. Efforts were also made to attract small investors, firstly, by offering facilities to subscribe to the loans through the Post Office and secondly, by the introduction of the Post Office Cash Certificates, the interest on which was free from income-tax. To this extent, a great deal was done to bring home the benefits of investment as opposed to hoarding. Also it can be said to have initiated the present large market in Securities although in the beginning there were too many unfortunate instances of these ignorant and credulous holders being induced by unscrupulous persons to part with their loans at ridiculous prices, whilst in the early days before they became more widely known, even the Post Office Cash Certificates were encashed long before the expiry of their 5 years' currency.

Even in the immediate post-war years, however, it can hardly be said that there was a market in any of the large Presidency towns which was conducive to free and unrestricted trading and there was a wide margin of as much as Rs. 2 between the buying and selling prices. As time wore on, however, all that was changed, and now it can be stated that a Government Loan is the easiest form of investment to negotiate. In Bombay and Calcutta, a class of trader has sprung up who deals in nothing else but Government Securities, in the same way that a person may trade in any other commodity. A holder may go to this dealer and provided there is no suspicion as regards his integrity or honesty, he can sell a security and realise the proceeds within an hour or two.

As a result of this easy negotiability, investors, who had hitherto been dealing in shares on account of their more ready market, turned their attention to Government Securities, resulting in a broadening of interest in this section. This received further impetus in more recent years by the compulsory investment on the part of insurance companies and charitable institutions of a large proportion of their funds in Government Securities.

The Bombay Stock Exchange may also be said to have played a very great part in bringing about a free and open Security market by officially placing the 3½ per cent. G. P. Notes on the Forward List. Later on, in 1926, this was followed by the 5 per cent. 1945/55 Loan and then in 1933 by the 4 per cent. 1960/70 Loan. During times of emergency in the past and again on account of the present War, the authorities have found it necessary to suspend forward trading, but there is no doubt that in normal times, the fact that there is this facility, is of very great importance for the negotiability of Securities. Particularly is this the case with large orders, which would certainly be difficult to execute in a cash market, without upsetting the price unduly and without letting everyone know who was making the purchase or sale, which is a most important consideration.

1939 Loans.

I. 3 per cent. Government of India Loan, 1963-65.

The following are extracts from the Government of India Notification, No. F. 3628-F, dated Simla, the 1st July 1939.

Subscriptions for a further issue of the 3 per cent. Loan, 1963-65, will be received on the 5th July 1939. Subscriptions may be in the form of cash or 5 per cent. Loan, 1939-44, or 5 per cent. Loan, 1940-43.

Cash and 5 per cent. Loan, 1939-44.—The list for subscriptions in cash or 5 per cent. Loan, 1939-44, will be closed without notice as soon as it appears that the total subscriptions in these two forms amount to Rs. 15 crores approximately, and in any case not later than the close of business on the 5th July 1939. Applications in the form of 5 per cent. Loan, 1939-44, will be allotted in full and if the total applications in this section, both cash and conversion, exceed approximately Rs. 15 crores, partial allotment will be made to subscribers in cash.

5 per cent. Loan, 1940-43.—Applications for conversion of holdings of 5 per cent. Loan, 1940-43, will be allotted in full without limit. The list for these conversion applications will be closed simultaneously with the closure of the list for subscriptions in cash and 5 per cent. Loan, 1939-44, and in any case not later than the close of business on the 5th July 1939.

3 per cent. Loan, 1963-65, issued at Rs. 98 per cent. and redeemable at par not earlier than 1963 and not later than 1965.

2. Date of Repayment.—If not previously repaid, the loan will be repaid at par on the 1st June 1965, but the Government of India reserve to themselves the right to repay the loan, or any part of it, at par, on or after the 1st June 1963, on giving three calendar months' notice in the *Gazette of India*.

3. Issue Price.—The price of this year's issue will be Rs. 98 for every Rs. 100 of the loan applied for.

4. Interest.—The loan will bear interest at the rate of 3 per cent. per annum. Interest will be payable half-yearly on the 1st of June and the 1st of December and will be liable to income-tax.

Interest for a full half-year, at the rate of 3 per cent. per annum, will be paid on the 1st December 1939 on the securities issued under the terms of this notification.

Conversion Terms.

5. The 5 per cent. Loan, 1939-44, and the 5 per cent. Loan, 1940-43, will be accepted in subscription to the 3 per cent. Loan, 1963-65 at the following rates :—

				Cash equivalent per Rs. 100 (nominal) of the securities tendered.	
				Rs. a. p.	
5 per cent. Loan, 1939-44	-	-	-	100	6 0
5 per cent. Loan, 1940-43	-	-	-	104	0 0

If the cash value of the loans tendered is not an exact multiple of the issue price per cent. of the new loan, the tenderer will receive in cash, at the time of issue of the new securities, the amount by which the value of the loans tendered exceeds the nearest lower multiple of the issue price.

Interest at the rate of 5 per cent. per annum up to the 4th July 1939, inclusive, on the securities accepted for conversion, will be paid in cash at the time of issue of the new securities.

Supplementary Provisions.

6. The Loan will be issued in the form of—

- (i) Stock, the applicants for which will be given Stock Certificates, or
- (ii) Promissory Notes.

If no preference is stated by the applicants, the securities will be issued in the form of Promissory Notes.

7. Applications for the loan must be for Rs. 100 or a multiple of that sum.
8. Applications will be received at the offices of the Reserve Bank of India at Bombay, Calcutta, Delhi and Madras and at the branches of the Imperial Bank of India at other places in India.
9. Applications may be in the form attached hereto or in any other form which states clearly the amount and description of the securities required, the full name and address of the applicant, and the treasury or sub-treasury at which he desires that interest shall be paid.
10. Applications should be accompanied by the necessary payment in any of the forms mentioned below :—
 - (a) **Cash or Cheque.**—Cheques accompanying applications should be drawn in favour of the Reserve Bank of India or the Imperial Bank of India as the case may be.
 - (b) **5 per cent. Loan, 1939-44, or 5 per cent. Loan, 1940-43.**—Applicants who tender securities in payment must transfer such securities to Government,
 - (a) in the case of Promissory Notes by endorsing these with the words "Pay to the Governor-General in Council" over their signature, and
 - (b) in the case of Stock, by signing the form of transfer deed on the back of the Stock Certificate before a witness.
11. If partial allotment is made in respect of subscriptions received in cash a proportionate refund will be made at the time of issue of the new securities. No interest will be paid on the amounts so refunded.

II. 3 per cent. Government of Madras Loan, 1959.

The following are extracts from the Government of Madras Notification No. 3 (L.)W.M.-1/39, dated Fort St. George, the 17th June 1939.

3 per cent. Loan of the Government of Madras, 1959, issued at Rs. 98-8-0 per cent. and redeemable at par on 21st June 1959.

1. **Object.**—The proceeds of the loan will be used only for the following wholly productive capital expenditure :—

- (i) Electric schemes,
- (ii) Irrigation works, and
- (iii) Advances to local bodies, agriculturists, etc.

2. **Security for Loan.**—In accordance with section 163(1) of the Government of India Act, 1935, the loan will be secured on the whole of the revenues of the Government of Madras.

The consent of the Central Government has been given to the flotation of this loan as required by section 163(3) of the Government of India Act, 1935.

3. **Description.**—The loan will be briefly described as the Madras Government 3 per cent. loan, 1959.

4. **Amount of Issue.**—The amount of the loan will be Rs. 150 lakhs.

5. **Issue Price.**—The issue price will be Rs. 98-0 for every Rs. 100 of the loan applied for.

6. **Subscriptions.**—Subscriptions will be received on 21st June 1939 only. The loan will be closed without notice as soon as it appears that the total subscription amounts approximately to Rs. 150 lakhs and in any case not later than the close of business on 21st June 1939.

7. **Partial Allotment.**—If the total subscription exceeds Rs. 150 lakhs, partial allotment will be made. If partial allotment is made, a proportionate refund will be made at the time of issue of the securities. No interest will be paid on the amounts so refunded.

8. **Date of Repayment.**—The loan will be repaid at par on the 21st June 1959.

9. **Interest.**—The loan will bear interest at the rate of 3 per cent. per annum from the 21st June 1939. Interest will be payable half-yearly on the 21st June and 21st December and will be subject to income-tax, but refunds will be payable to holders of the securities who are not liable to the tax or are liable to the tax at a lower rate.

10. **Place of Payment of Interest.**—Interest will be paid at any treasury or sub-treasury in the Province of Madras, at the Central treasuries at Bangalore and Trivandrum and at the Public Debt Offices at Madras, Bombay, Calcutta and Delhi.

11. **Form of Securities.**—The loan will be issued in the form of—

- (1) Stock, the applicants for which will be given Stock Certificates, or
- (2) Promissory Notes.

If no preference is stated by the applicants, the securities will be issued in the form of Promissory Notes.

The Promissory Notes are transferable by endorsement and will be in denominations of Rs. 100, Rs. 500, Rs. 1,000, Rs. 5,000, Rs. 10,000, Rs. 25,000, Rs. 50,000 and Rs. 1,00,000.

12. **Applications for Loan.**—(1) Applications for the loan must be for Rs. 100, or for a multiple of that sum.

(2) Applications will be received at any branch of the Imperial Bank of India located within the Province of Madras, at the Treasury Pay Offices of the Imperial Bank of India at Anantapur, Chittoor, Kurnool and Tanjore, at the branches of the Imperial Bank of India at Bangalore, and Trivandrum, and at the offices of the Reserve Bank of India at Madras, Bombay, Calcutta and Delhi.

(3) Applications may be made in the form attached hereto (printed copies of which are available at the places mentioned in sub-paragraph (2) above) or in any other form which states clearly the amount and description of the securities required, the full name and address of the applicant and the Public Debt Office or treasury or sub-treasury at which he desires that interest shall be paid.

13. **Method of Paying Subscriptions.**—Applications should be accompanied by the necessary payment either in cash or by cheque for the amount of the loan applied for. Cheques should be made payable to the Reserve Bank of India or the Imperial Bank of India, as the case may be.

When a cheque is tendered in payment of the application money, the security will not be issued until the amount of the cheque has been realized.

14. **Brokerage.**—Brokerage will be paid at the rate of 1/8th per cent. to recognised bankers and brokers on allotments made in respect of applications for the loan bearing their stamp.

15. **Depreciation Fund.**—The Government of Madras will provide in each financial year from 1940-41 to 1958-59, inclusive, a sum equal to $1\frac{1}{2}$ per cent. of the total nominal amount of the loan to be used for purchasing the securities of the loan for cancellation.

16. **Sinking Fund.**—The Government of Madras will also make such annual contributions to a Sinking Fund to provide for the amortisation of their open market loans, as they may from time to time decide to be necessary.

III. 3 per cent. Punjab Government Loan, 1949.

The following are extracts from the Government of the Punjab Notification No. 1-W.M. Special, dated Simla, the 11th August 1939:—

Subscriptions for an issue of 3 per cent. Punjab Bonds, 1949.

1. **Description.**—The loan will be described as the 3 per cent. Punjab Bonds, 1949. The amount of the loan will be Rs. 250 lakhs (nominal value).

2. **Subscriptions.**—Subscriptions will be received on the 16th August 1939, in the form of cash or cheque. The issue will be closed without notice at any time during the day as soon as it appears that the total subscriptions amount to approximately Rs. 250 lakhs (nominal value) or in any case not later than the close of business on the 16th August 1939. If the total subscriptions exceed Rs. 250 lakhs (nominal value), partial allotment will be made, and a proportionate refund of cash given as soon as possible after allotment. No interest will be paid on the amounts so refunded.

3. **Object.**—The subscriptions received will be devoted to the Haveli and Thal Projects which are productive irrigation schemes.

4. **Issue Price.**—The issue price will be Rs. 98-0-0 for every Rs. 100 of the Bonds applied for.

5. **Date of Repayment.**—The Bonds will be repaid at par on the 15th August 1949.

6. **Interest.**—The Bonds will bear interest at the rate of 3 per cent. per annum. Interest will be payable half-yearly on the 15th February and 15th August, and will be liable to income-tax. Refunds will be obtainable by holders who are not liable to the tax or are liable to the tax at a lower rate. Interest for a full half-year will be paid on the 15th February 1940 on the securities issued under the terms of this notification.

7. **Place of Payment of Interest.**—Interest will be paid at any Treasury or Sub-Treasury in the Punjab and at the Public Debt Offices, Bombay, Calcutta, Delhi and Madras.

8. **Form of Securities.**—The loan will be issued in the form of—

- (1) Stock, the applicants for which will be given Stock Certificates, or
- (2) Promissory Notes.

If no preference is stated by the applicants, the securities will be issued in the form of Promissory Notes.

The Promissory Notes are transferable by endorsement and will be in denominations of Rs. 100, Rs. 500, Rs. 1,000, Rs. 5,000, Rs. 10,000, Rs. 25,000, Rs. 50,000 and Rs. 1,00,000.

9. **Applications for Loan.**—Applications, which must be for Rs. 100 or a multiple of that sum, will be received at any branch of the Imperial Bank of India located in the Punjab, at the Treasury Pay Offices of the Imperial Bank of India at Fazilka, Hoshiarpur, Jhang, Jhelum, Khanewal, Mianwali, Pakpattan, Qila Sheikhpura, Rohtak and Toba Tek Singh and at the offices of the Reserve Bank of India at Bombay, Calcutta, Delhi and Madras.

10. **Form of Application.**—Application may be in the form attached hereto, or in any other form which states clearly the amount and description of the securities required, the full name and address of the applicant, and the place at which he desires the interest shall be paid. Applications should be accompanied by the necessary payment of the amount of the Bonds applied for in any of the forms mentioned below.

11. **Form of Payment.**—Payment may be either in cash or by cheque. Cheques should be made payable to the Reserve Bank of India or the Imperial Bank of India, as the case may be. Securities will not be issued until the cheque tendered in payment of the application money has been cleared.

12. **Brokerage.**—Brokerage at the rate of one-eighth per cent. will be paid to recognised bankers and brokers on allotments made on applications for the Bonds bearing their stamps.

13. **Depreciation Fund.**—For the purpose of providing against depreciation in the market value of the loan, the Punjab Government undertake to set aside annually a sum equal to $1\frac{1}{2}$ per cent. of the amount of the loan to form a fund to be used for its purchase and cancellation. The sum to be set aside will be calculated on the total issue of the loan.

14. **Public Debt Office.**—The Provincial Public Debt Office will be located at the Public Debt Office of the Reserve Bank of India, Delhi.

1940 Loans.

I. Creation of Rupee Loans as counterparts of the Indian Sterling Loans.

The following are extracts from the Government of India Notification, No. D/1184-B, dated New Delhi, the 22nd February 1940:—

It is hereby notified for general information that the Governor General-in-Council is pleased to sanction the creation of the following Rupee loans as counterparts of the Indian Sterling loans noted against each:—

Rupee Loans.	Sterling Loans.
(1) 3 per cent. Loan, 1949—52.	(1) India 3 per cent. Stock, 1949—52.
(2) $3\frac{1}{2}$ per cent. Loan, 1954—59.	(2) India $3\frac{1}{2}$ per cent. Stock, 1954—59.
(3) 4 per cent. Loan, 1948—53.	(3) India 4 per cent. Stock, 1948—53.
(4) $4\frac{1}{2}$ per cent. Loan, 1950—55.	(4) India $4\frac{1}{2}$ per cent. Stock, 1950—55.
(5) $4\frac{1}{2}$ per cent. Loan, 1958—68.	(5) India $4\frac{1}{2}$ per cent. Stock, 1958—68.
(6) 5 per cent. Loan, 1942—47.	(6) India 5 per cent. Stock, 1942—47.

2. With effect from the 1st April 1940 and until further notice holders of the several sterling loans stated above are given the option of transferring their holdings from the books of the Bank of England to the Rupee Registers to be opened and maintained in India by the Public Debt Offices of the Reserve Bank of India at Bombay, Calcutta, Delhi and Madras; the terms on which such conversions may be effected will be announced by the Reserve Bank of India from time to time.

3. The rupee counterparts of the sterling loans so converted will be subject to the usual conditions and privileges as to renewal, conversion, consolidation, sub-division, and encumbrance for payment of interest at any Treasury or Sub-Treasury in India, and such securities will be governed by the provisions of the Indian Securities Act, 1920, and the rules framed thereunder.

4. Specimen copies of the rupee securities mentioned above are open for inspection at the Public Debt Offices of the Reserve Bank of India at Bombay, Calcutta, Delhi and Madras, and will be supplied on request at these offices to *bona fide* applicants.

5. Rupee securities issued in India in lieu of sterling securities will not be convertible into sterling, but may, on application, be encashed for payment of interest at the London office of the Reserve Bank of India as in the case of other rupee loans.

II. 3 per cent. Government of India Defence Bonds, 1946.

The following are extracts from the Government of India Notification No. D/C 228-F., dated Simla, the 4th June 1940 :—

It is notified for general information that Government of India Defence Bonds will be obtainable with effect from the 10th June 1940 and until further notice.

2. **Date of Repayment.**—The Bonds will be repaid at Rs. 101 for every Rs. 100 nominal on the 1st August or 1st February following the expiry of six years from the date of issue, as the case may be.

3. **Issue Price.**—The Bonds will be issued at par.

4. **Interest.**—The Bonds will bear interest at the rate of 3 per cent. per annum.

Interest will be payable half-yearly on the 1st of August and the 1st of February and will be liable to income-tax.

Advance interest will be paid from the date of purchase to the date preceding the next regular date of half-yearly payment of interest.

No interest will accrue on the Bonds after the date fixed for repayment.

Supplementary Provisions.

5. The Bonds will be issued in the form of—

- (i) Stock, the applicants for which will be given Stock Certificates, or
- (ii) Promissory Notes.

If no preference is stated by the applicants, the securities will be issued in the form of Promissory Notes.

6. Applications for the Bonds may be for Rs. 100 or any multiple of that sum. The total value of the Bonds which may be held by an individual either in his own name or jointly with another shall be limited to Rs. 15,000 nominal.

7. The Bonds will be available at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras, at branches at the Imperial Bank of India at other places in India and at all Government treasuries.

8. Applications may be in the form attached hereto or in any other form which states clearly the amount and description of the securities required, the full name and address of the applicant, the treasury or sub-treasury at which interest is required to be paid and a certificate that the total value of the Bonds held including the Bonds applied for does not exceed Rs. 15,000 nominal.

9. Payments may be made in cash or by cheque. Cheques tendered at offices of the Reserve Bank or the Imperial Bank of India should be drawn in favour of the Bank concerned and cheques tendered at treasuries in favour of the Treasury Officer.

10. Brokerage will be paid at the rate of 1/16th per cent. to recognised bankers and brokers on applications for Bonds bearing their stamp.

III. Government of India Interest Free Defence Bonds, 1943.

The following are extracts from the Government of India Notification No. D/C 229-F., dated Simla, the 4th June 1940 :—

It is notified for general information that Government of India Interest-free Defence Bonds will be obtainable with effect from 10th June 1940 and until further notice.

2. **Date of Repayment.**—The Bonds will be repaid at par on the expiry of three years from the date of issue. The Bonds may also be encashed at par not less than twelve months after issue on three months' notice given by the holder in writing at any date to the Reserve Bank of India.

In case of private emergency a holder desiring to encash his Bonds outside these provisions, may apply to the Reserve Bank of India, which on being satisfied of the need may repay the Bonds at par.

3. **Issue Price.**—The Bonds will be issued at par.

4. **Interest.**—No interest will be paid on these bonds.

Supplementary Provisions.

5. The Bonds will be issued in the form of stock, the applicants for which will be given Stock Certificates.

6. Applications for these Bonds may be for any amount above Rs. 50.

7. The Bonds will be issued from the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras.

8. Applications may be in any form which states clearly the amount of the securities required and the full name and address of the applicant. Applications will be received at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras, at branches of the Imperial Bank of India at other places in India and at all Government treasuries.

9. Payments may be made in cash or by cheque. Cheques tendered at offices of the Reserve Bank or the Imperial Bank of India should be drawn in favour of the Bank concerned and cheques tendered at treasuries in favour of the Treasury Officer.

IV. 3 per cent. Government of India Defence Bonds, 1946.

The following are extracts from the Government of India Notification No. D/C 872-F., dated Simla, the 25th July 1940 :—

It is notified for general information that the Government of India 3 per cent. Defence Bonds, 1946, repayable at Rs. 101 for every Rs. 100 nominal on the 1st August 1946 and bearing interest at 3 per cent. per annum, payable half-yearly, which interest will be liable to income-tax, will be obtainable with effect from the 1st August 1940 until further notice.

1. **Applications for Bonds.**—The Bonds will be available at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras, at branches of the Imperial Bank of India at other places in India, and at all Government treasuries.

2. **Interest.**—The first interest payment due on the Bonds for the full half-year ending the 31st January 1941 will be made on the 1st February 1941, and thereafter interest will be payable half-yearly on the 1st of August and the 1st of February. No interest will accrue on the Bonds after the date fixed for repayment.

3. **Issue Price.**—The prices at which the Bonds can be purchased are as follows :—

Bonds purchased on any date from the—

	Price per
	Rs. 100 nominal
	Rs. a. p.
1st August 1940 to the 10th August 1940	- 100 0 0
12th August 1940 to the 17th August 1940	- 100 0 9
19th August 1940 to the 24th August 1940	- 100 1 6
26th August 1940 to the 31st August 1940	- 100 2 3

and thereafter at prices increasing by 9 pies per cent, weekly up to the 31st January 1941. This weekly increase approximates to the net interest which accrues weekly on the Bonds.

Conversion Terms.

4. **5 per cent. Loan, 1940-43**, will be received in payment of the purchase price of the Bonds at its full maturity value, that is to say, at Rs. 100 for Rs. 100 nominal of the Loan tendered. If the maturity value of the Loan tendered is not an exact multiple of the issue price per cent. of the Bonds, the tenderer will receive in cash, at the time of issue of the new securities, the amount by which the value of the Loan tendered exceeds the nearest lower multiple of the issue price.

Example.—An applicant tenders on the 19th August 1940, Rs. 25,000 nominal value of the 5 per cent. Loan 1940-43, in payment of the purchase price of the 3 per cent. Defence Bonds, 1946. The value of the Loan tendered being Rs. 25,000, the applicant will receive Rs. 24,900 nominal of the Bonds and Rs. 76-10-6 in cash.

Interest on the securities accepted for the purchase of the Bonds at the rate of 5 per cent. per annum up to the 30th September, 1940, inclusive, will be paid in cash at the time of issue of the new securities.

Supplementary Provisions.

5. The Bonds will be issued in the form of—

- (i) Stock, the applicants for which will be given Stock Certificates, or
- (ii) Promissory Notes.

If no preference is stated by the applicants, the securities will be issued in the form of Promissory Notes.

6. Applications for the Bonds may be for Rs. 100 or any multiple of that sum.

7. Applications may be in the form attached hereto or in any other form which states clearly the amount and description of the securities required, the full name and address of the applicant and the treasury or sub-treasury at which interest is required to be paid.

8. Applications should be accompanied by the necessary payment in any of the forms mentioned below—

- (a) **Cash or Cheque.**—Cheques tendered at offices of the Reserve Bank or the Imperial Bank of India should be drawn in favour of the Bank concerned and cheques tendered at treasuries in favour of the Treasury Officer.
- (b) **5 per cent. Loan, 1940-43.**—Applicants who tender securities in payment must transfer such securities to Government,
 - (i) in the case of promissory notes by endorsing them with the words “Pay to the Governor-General-in-Council” over their signature, and
 - (ii) in the case of Stock, by signing the form of transfer deed on the back of the Stock Certificate before a witness.

9. Brokerage will be paid at the rate of 1/16th per cent. to recognised bankers and brokers on applications for Bonds bearing their stamp.

BANKING SECTION

Allahabad Bank, Limited.

(Regd. Allahabad, 1865.)

(See also Advertisement.)

Directors—(1) R. R. Haddow, Esq., (*Chairman*); (2) A. K. G. Hogg, Esq. ; (3) Sir J. P. Srivastava, D.Litt., D.Sc., A.M.S.T. ; and (4) W. Lothian Brown, Esq.

General Manager—W. Lothian Brown, Esq. **Head Office**—Allahabad Bank Buildings, 6, Royal Exchange Place, Calcutta.

Bombay Manager—W. R. Berry, Esq.

Bombay Office—Allahabad Bank Buildings, Apollo Street, Bombay.

Financial Year—ends March 31. **Accounts**—published in May.

Dividends—payable in May and November.

Capital—Authorised—Rs. 40,00,000 in (i) 25,000 Ordinary Shares of Rs. 100 each and (ii) 15,000, 6% (Tax-free) Preference shares of Rs. 100 each. **Issued and Subscribed**—Rs. 40,00,000 in (i) 25,000 Ordinary Shares of Rs. 100 each and (ii) 15,000, 6% (Tax-free) Preference shares of Rs. 100 each. **Paid-up**—Rs. 35,50,000 in (i) 9,000 Ordinary Shares of Rs. 100 each on which Rs. 50 is paid, and (ii) 16,000 Ordinary shares of Rs. 100 each and (iii) 15,000, 6% (Tax-free) Preference shares of Rs. 100 each.

This is one of the oldest existing Joint Stock Banks registered in India, and banking business of every description is carried on including the financing of produce up-country. The bank's progress can best be seen from the various increases of capital which have taken place since its inception. The original capital was Rs. 1,90,830 which was increased to Rs. 3,00,000 in 1870, then to Rs. 4,00,000 in 1890, to Rs. 5,00,000 in 1896, to Rs. 10,00,000 in 1901, to Rs. 15,00,000 in 1904, to Rs. 20,00,000 in 1907, to Rs. 25,00,000 in 1913, to Rs. 30,00,000 in 1914 and to the present figure in 1920. In the year 1939, it became affiliated to the Chartered Bank of India, Australia and China. Apart from a head office in Calcutta, there are numerous branches and sub-agencies :—

Bank of Baroda, Ltd.

(Regd. Baroda, July 20, 1908).

(See also Advertisement.)

Directors—(1) Toolsidas Kilachand, Esq., (*Chairman*); (2) Raj Ratna Krishnarao Vithalrao Uplap, B.A., LL.B., (Naib Diwan, Baroda); (3) Durgaprasad Shambhuprasad Laskari, Esq., (Mill Agent, Ahmedabad); (4) Raj Ratna Girdharlal Dosabhai Parikh, B.A., LL.B. (Baroda); (5) Raj Mitra Bhailal Dajibhai Amin, B.A., M.S.C.I. (Managing Agent, Alembic Chemical Works, Ltd., Baroda); (6) S.D. Saklatvala, Esq. (Tata Sons, Ltd., Bombay); (7) R. D. Birla, Esq. (Messrs. Birla Bros., Ltd., Bombay).

General Manager—W. G. Groundwater, Esq. **Head Office**—Baroda.

Bombay Manager—M. D'Souza, Esq. **Bombay Office**—Apollo Street.

Financial Year—ends December 31. **Accounts**—published in February.

Dividends.—payable half-yearly in March and July.

Capital—Authorised—Rs. 2,40,00,000 in 240,000 shares of Rs. 100 each. **Issued**—Rs. 1,20,00,000 in 120,000 shares of Rs. 100 each. **Subscribed**—Rs. 1,20,00,000 in 120,000 shares of Rs. 100 each. **Paid-up**—Rs. 37,09,460 made up of as follows:—(i) Rs. 30,00,000 in 60,000 shares on which Rs. 50 has been paid up and (ii) Rs. 7,09,460 which is arrived at as follows:—Rs. 30 per share has been called up on 60,000 shares—Rs. 18,00,000, but from this, first calls of Rs. 20 per share amounting to Rs. 10,90,540 are unpaid and must be deducted. (This call was only made on November 15, 1939, payable on or before January 15, 1940 and on January 24, 1940, the unpaid amount was only Rs. 11,540.)

This bank does banking business of every description and enjoys the patronage of and is largely supported by the Government of His Highness the Maharaja Gaekwar of Baroda. In this instance also the progress of the Company can be seen from the various increases of capital. The original capital of Rs. 20,00,000 was raised to Rs. 60,00,000 in the year 1921 by the issue of 40,000 new shares of Rs. 100 each. In June 1939 there was a further increase from this figure by the creation of 1,80,000 new shares of Rs. 100 each, of which 60,000 shares were issued to existing shareholders at a premium of Rs. 45 per share, in the proportion of one new share for every share held. These ranked for dividend from the date of allotment.

Financial Year—ends December 31. **Accounts**—published in February.

Dividends—payable half-yearly in February and July.

Capital—Authorised, Issued and Subscribed—Rs. 2,00,00,000 in 2,00,000 shares of Rs. 100 each. **Paid-up**—Rs. 1,00,00,000 in 2,00,000 shares of Rs. 100 each on which Rs. 50 is paid-up.

The Bank of India was registered in the year 1906, with the particular object of financing Bombay's local trade. It is the second largest Indian Joint Stock Bank from the point of view of capital and it enjoys the confidence of the mercantile community and investing public. It has made most satisfactory progress over the 34 years it has been in existence and from the original capital of Rs. 50,00,000 the figure was increased in the year 1919 by the issue of 1,00,000 shares of Rs. 100 each (paid up Rs. 50) at a premium of Rs. 50 per share. Apart from the Head Office in Bombay, branches have gradually been opened up all over India.

(Cantab), Bar-at-Law, I.C.S., (*Ex-Officio*) Registrar, Co-operative Societies and Director of Rural Development, Province of Bombay, Poona ; (15) V. B. Mardhekar, Esq., M.A.

Manager—R. N. Trivedi, Esq., B.A. (Hons.), G.D.C.A. **Registered Office**—Sir Vithaldas Thackersey Memorial Building, 9, Bake House Lane, Fort, Bombay.

Financial year—ends June 30. **Accounts**—published in September.

Dividends—payable in September.

Capital—Authorised—Rs. 10,00,000 in 10,000 shares of Rs. 100 each. **Issued and Subscribed**—Rs. 6,41,000 in 6,410 shares of Rs. 100 each. **Paid-up**—Rs. 4,21,000 in 910 shares of Rs. 100 each fully paid up, Rs. 91,000 and 5,500 shares of Rs. 100 each, on which Rs. 60 has been paid, Rs. 3,30,000.

Debentures—Rs. 20,00,000 in 3½ per cent. Mortgage Debentures Authorised. Outstanding Rs. 16,76,200. The unsubscribed portion of Debentures amounting to Rs. 3,23,800 was taken up by the Government of Bombay. This amount of Rs. 3,23,800 taken up by the Government is not included in the statement of account prepared as on 30th June 1939.

This Bank came into existence as a result of the recommendations of the Land Mortgage Committee. It was formally registered on 7th December 1935 under the Bombay Co-operative Societies' Act with an Authorised Capital of Rs. 10,00,000. The main functions of the Bank are, to finance the primary mortgage banks by issuing debentures, inspect their working and give them advice and help ; to advance loans to agriculturists through primary mortgage banks on the security of their lands.

The Bombay Legislative Council passed a resolution in 1935 authorising the Government to guarantee both the principal and interest of the Debentures to be issued by the Bank to the extent of Rs. 50 lakhs. In order to safeguard the interests of the Debenture holders, provision has been made for the appointment by the Government

of the Registrar or any other person as the trustee for the purpose of securing fulfilment of the Bank's obligations to the holders of the debentures. All the property of the Bank on the security of which Debentures are issued shall vest in the trustee from the date of their issue. Apart from this, the Government of Bombay have agreed to grant the following concessions : exemption from stamp duty, registration fees, and income tax on the profits of the bank and dividends on shares. The Government of Bombay have also promised a grant of an annual subsidy to cover any deficit which may occur in the working of the bank in the first three years up to a maximum of Rs. 10,000 in the first year, falling to Rs. 6,000 in the third year.

The membership of the Bombay Provincial Land Mortgage Bank Ltd. is open to individual persons as well as primary Land Mortgage Banks and Co-operative Societies.

The Board of Directors is composed as follows :—five to be elected by primary Land Mortgage Banks, two nominated from among the shareholders of the Bank by the Registrar with the approval of the Government, one nominated by the Bombay Provincial Co-operative Bank, five elected by members of the Bank other than primary Land Mortgage Banks, the Registrar and the Managing Director of the Banks. The maximum dividend payable on shares is restricted to 6½ per cent.

General Manager—H. C. Captain, Esq. **Head Office**—Central Bank Buildings, Esplanade Road, Bombay.

Financial Year—ends December 31. **Accounts**—published in February.

Dividends—payable half-yearly in April and August.

Capital—Authorised—Rs. 3,50,00,000 in 7,00,000 shares of Rs. 50 each. **Issued and Subscribed**—Rs. 3,36,26,400 in 6,72,528 shares of Rs. 50 each. **Paid-up**—Rs. 1,68,13,200 in 6,72,528 shares of Rs. 50 each on which Rs. 25 has been paid up.

Due to the efforts, enthusiasm and organising skill of the late Sir S. N. Pochkhanawala, the Central Bank of India, Ltd., came into existence in 1911, and it was the culmination of his ambition to see that this Bank became an all-India Banking institution. His efforts in this direction were assisted by the late Sir Pherozshah Mehta, who was the first Chairman. The present position it occupies in the Indian Banking world has been built up despite a good deal of opposition and in the face of very great difficulties at times. The Bank transacts every kind of banking business and has always been alive to the necessity of providing the best and most up-to-date service to its clients. For example, there is a model scheme of insurance for Savings Depositors; Executor and Trustee business is undertaken and the Central was the first Bank in Bombay to instal a large Safe Deposit Vault at its Head Office. The enormous expansion over recent years can be very adequately judged from the fact that there are 130 Branches and Pay-Offices throughout India. From the initial stages the capital has been increased to its present imposing figure. In July 1923, the Bank acquired the Tata Industrial Bank Ltd., as a going concern with all the assets and liabilities, on the basis of one Central Bank share of the face value of Rs. 50 (Rs. 25 paid up) for two shares of the Tata Industrial Bank of the face value of Rs. 75 each (Rs. 22½ paid up).

Dividends—payable in April and September.

Capital—Authorised, Issued and Subscribed—£3,000,000 in 600,000 shares of £5 each fully paid.

Amongst the British Exchange Banks operating in India, the Chartered Bank of India, Australia and China is regarded as the premier institution both from the point of view of its capital and also its resources. It was incorporated in England in the year 1853 and it has the distinction of being one of the few banks working under a Royal Charter. Its organisation covers a wider field than the other British Exchange Banks and it operates not only in India, but also in the Dutch East Indies, China, Japan and the Federated Malay States. It also has important branches in New York and Manchester apart from the Head Office in London. The Bank purchased the entire undertaking of the P. & O. Banking Corporation Ltd., and took over its business from February 1, 1939. It thus owns, *inter alia*, about 94 per cent. of the shares of the Allahabad Bank Ltd. In the year 1919 the capital was increased from £ 1,200,000 to £ 2,000,000 by the issue of 40,000 new shares of £ 20 each and again in 1920 it was increased further to its present figure by the creation and issue of 200,000 new shares of £5 each, each share of £20 being sub-divided at the same time into 4 shares of £5 each.

Devkaran Nanjee Banking Co., Ltd.

(Incorporated May 26, 1938.)

(See also Advertisements.)

The Late Mr. Devkaran Nanjee.

Directors—(1) Pranlal Devkaran Nanjee, Esq., J.P., (*Chairman*); (2) Choonilal Devkaran Nanjee, Esq.; (3) Vrindavandas H. Bhagat, Esq.; (4) Harshadrai B. Parekh, Esq.; (5) Varjivan K. Gandhi, Esq.; (6) Natvarlal S. Choksey, Esq.; (7) Narandas R. Cantol, Esq.; (8) Jayantilal R. Trivedi, Esq.

Secretary—K. R. Patwardhan, Esq.
Registered Office—Devkaran Nanjee Buildings, Elphinstone Circle, Fort, Bombay.

Financial Year—ends December 31.
Accounts—published in February.

Capital—Authorised—Rs. 50,00,000, *i.e.*, (1) Rs. 49,00,000 in 980 Ordinary shares of Rs. 5,000 each and (2) Rs. 1,00,000 in 200 Founders shares of Rs. 500 each.

Issued and Subscribed—Rs. 20,00,000, *i.e.*, (1) Rs. 19,00,000 in 380 Ordinary shares of Rs. 5,000 each and (2) Rs. 1,00,000 in 200 Founders shares of Rs. 500 each. **Paid-up**—Rs. 11,30,000, *i.e.* (1) Rs. 9,50,000 in 380 Ordinary shares of Rs. 5,000 each on which Rs. 2,500 has been paid up; (2) Rs. 1,00,000 in 200 Founders shares of Rs. 500 each fully paid-up and (3) Rs. 80,000 being the amount of the calls received in advance.

In December 1939, the Authorised Capital was increased from Rs. 20,00,000 to Rs. 50,00,000, by the creation of 600 Ordinary shares of Rs. 5,000 each and at the same time a further call was made on the Ordinary and Founders' shares, thus increasing the Paid-up Capital from Rs. 5,08,750 to Rs. 10,50,000.

The Bank conducts banking business of every description and was the first institution to introduce, for the encouragement of thrift and small savings, H. M. Mint stamped small silver Bars of 10, 20, 50, 100 and 250 Tolas which are sold through its own Offices and 133 Agencies all over India. Also, the Bank issues 6 year and 3 year "Denabank Cash Certificates" yielding interest at about $3\frac{1}{2}$ per cent. and $2\frac{1}{2}$ per cent. respectively, in denominations of Rs. 10, Rs. 20, Rs. 50, Rs. 100, Rs. 500, Rs. 1,000 and Rs. 10,000. Since the inception of the Bank in the short period of just over two years, three branches have been opened, viz., at Thakurdwar, near Sandhurst Bridge, and at Kalbadevi.

Eastern Bank, Limited.

(Regd.—England December 17, 1909.)

Directors—(1) Sir James Leigh-Wood, K.B.E., C.B., C.M.G., (*Chairman*); (2) G. Bromley-Martin, Esq. (*Deputy Chairman*); (3) Sir Thomas Strangman, K. C. (*Deputy Chairman*); (4) Auguste Callens, Esq.; (5) Sir John Caulcutt, K.C.M.G.; (6) Captain Derek Fitzgerald; (7) Sir Percy Wilson Newson, B. T.

General Manager—N. S. Golder, Esq. **Head Office**—2 and 3 Crosby Square, London, E.C. 3. **Bombay Manager**—J. H. Webster, Esq. **Bombay Office**—Ismail Buildings, Hornby Road, Fort, Bombay.

Financial year—ends December 31. **Accounts**—published in March.

Dividends—payable in October and April.

Capital—Authorised—£2,000,000 in 200,000 shares of £10 each. **Issued and Subscribed**—£2,000,000 in 200,000 shares of £10 each. **Paid-up**—£1,000,000 in 200,000 shares of £10 each on which £5 has been called up.

The Eastern Bank is of a comparatively recent origin in the field of exchange banking in India having been founded only in the year 1909. It has made very satisfactory progress, in this country and in Iraq, Singapore and Ceylon. The original capital was £1,000,000 but this was increased in 1914 to £1,500,000 and in 1919 to £2,000,000. Two share registers are maintained, one in Bombay and one in London and scrip can be transmitted from one to the other. The Head Office is in London and there are branches in the principal cities in India and Iraq, and also at Colombo and Singapore.

Hongkong and Shanghai Banking Corporation.

(Incorporated—in Hongkong in 1867.)

Directors—(1) H. V. Wilkinson, Esq., *Chairman*; (2) D. F. Landale, Esq., *Deputy Chairman*; (3) Hon. Mr. S. H. Dodwell; (4) A. H. Compton, Esq.; (5) G. Miskin, Esq.

Chief Manager—Sir Vandeleur M. Grayburn (Hongkong). **Head Office**—Hongkong. **Bombay Manager**—F. E. Nicoll, Esq. **Bombay Office**—Churchgate Street.

Financial year—ends December 31. **Accounts**—published in February.

Dividends—payable in March and August.

Capital:—Authorised—\$50,000,000 in 400,000 shares of \$125 each. **Issued and Subscribed**—\$20,000,000 in 160,000 shares of \$125 each. Reserve liability of shareholders: \$20,00,000.

This is an important banking institution registered in the Far-East. It owes its existence to a special ordinance of the Legislative Council of Hongkong as far back as the year 1867. The original capital was \$5,000,000 and this was increased to \$7,500,000 in 1883. In the year 1890 it was further increased to \$10,000,000, in 1907 to \$15,000,000 and in 1921 to \$20,000,000.

The Imperial Bank of India was brought into being in the year 1920 by the enactment of special legislation to amalgamate the three existing Presidency Banks of Bombay, Bengal and Madras. From that date up till 1935 it acted as bankers to the Government but many of its previous functions were discontinued, subsequent to the inauguration of the Reserve Bank. That institution then assumed control of Government Currency and Public Debt Offices whilst it also took over the Public Accounts Departments of the Imperial Bank in Bombay, Calcutta, Madras, Delhi and Rangoon. In other places, the Imperial Bank continues to carry on the Government Treasury business as agents of the Reserve Bank. When the Imperial Bank of India Amendment Act came into being on 1st April 1935, advantage was taken of the removal of previous restrictions to extend the scope of the business. Besides the Local Head Offices, the Bank maintains over 350 branches and sub-offices in India, Burma and Ceylon. The London Office is situated at 25, Old Broad Street, E.C.2.

National Bank of India, Ltd.

(Regd. at Calcutta September 29, 1863 ; in London March 1866.)

Directors—(1) R. Langford James, Esq., (*Chairman*) ; (2) J. A. Swan, Esq., (*Deputy Chairman*) ; (3) L. T. Carmichael, Esq. ; (4) W. Shakespeare, Esq. ; (5) Sir John P. Hewett, G.C.S.I., K.B.E., C.I.E. ; (6) J. R. H. Pinckney, Esq., C.B.E. ; (7) A. N. Stuart, Esq.

General Manager—E. H. Lawrence, Esq. **Head Office**—26, Bishopsgate, London, E.C. 2. **Bombay Manager**—W. Kerr, Esq. (Acting). **Bombay Office**—Esplanade Road.

Financial year—ends December 31. **Accounts**—published March.

Dividends—payable April and September.

Capital—Authorised and Subscribed—£4,000,000 in 160,000 shares of £25 each. **Paid-up**—£2,000,000 in 160,000 shares of £25 each on which £12½ have been paid.

This bank originated as a rupee concern, having been registered in Calcutta in 1863. Two and a half years later, it was transferred to England and became a sterling company registered in Great Britain. Apart from several branches in this country, the bank subsequent to the last war has built up an important business in East Africa. The capital was increased to its present figure from £2,000,000 by the issue of 40,000 new shares of £25 each in 1919 and 40,000 new shares of £25 each in 1920.

National City Bank of New York.

(Incorporated—by Charter—New York City, 1812.)

Directors—(1) James H. Perkins, Esq., (*Chairman*); (2) W. Randolph Burgess, Esq., (*Vice-Chairman*); (3) Sosthenes Behn, Esq.; (4) Curtis E. Calder, Esq.; (5) Guy Cary, Esq.; (6) Edward A. Deeds, Esq.; (7) Cleveland E. Dodge, Esq.; (8) A. P. Giannini, Esq.; (9) Joseph P. Grace, Esq.; (10) Amory Houghton, Esq.; (11) Gerrish H. Milliken, Esq.; (12) Gordon S. Rentschler, Esq.; (13) James A. Stillman, Esq.; (14) Eric P. Swenson, Esq.; (15) Gerard Swope, Esq.; (16) Reginald B. Taylor, Esq.; (17) Robert Winthrop, Esq. **Comptroller**—Rowland R. Hughes, Esq.

Head Office—55, Wall Street, New York City. **Bombay Manager**—C. S. Ransom, Esq. **Bombay Office**—Hornby Road, Fort, Bombay.

Financial year—ends December 31. **Accounts**—published in January.

Capital—6,200,000 shares of \$12.50 each, \$77,500,000.

Up till a few years ago, the National City Bank of New York was the world's largest bank from the point of view of Capital, Deposits and Reserves, but it has now recently had to give way to the Chase National Bank, which, on account of various amalgamations, has now secured the first place. The National City Bank had a capital of only \$1,000,000 in 1900. In June 1929 this stood at \$110,000,000 and two years later there was a further increase to \$124,000,000, consequent upon the absorption of the Bank of America, N. A. In the year 1933, there was a reduction of capital from \$124,000,000 to \$77,500,000 by writing off \$7.50 per share and reducing the par value of the shares from \$20 to \$12.50. Thereafter, the capital was again increased to \$127,500,000 by the issue of \$50,000,000, 5 per cent. preferred stock. In 1936, this preferred stock was retired and the capital reduced to its present figure.

The bank owns the International Banking Corporation and has as affiliates, the City Bank Farmers Trust Company, the National City Safe Deposit Company and the National City Bank of New York (France) S. I. There are over 140 Offices.

Dividends—payable in April.

Capital—Authorised—Rs. 30,00,000 in 400 Deferred shares of Rs. 500 each, Rs. 2,00,000; 8,000, 5 per cent Taxable Cumulative Preference shares of Rs. 50 each, Rs. 4,00,000; 96,000 Ordinary shares of Rs. 25 each, Rs. 24,00,000. **Issued**—Rs. 18,00,000 in 400 Deferred shares of Rs. 500 each, Rs. 2,00,000, 8,000, 5 per cent (Taxable) Cumulative Preference shares of Rs. 50 each, Rs. 4,00,000; 48,000 Ordinary shares of Rs. 25 each, Rs. 12,00,000. **Subscribed**—Rs. 6,09,775 in 18 Deferred shares of Rs. 500 each, Rs. 9,000; 7,950, 5 per cent Redeemable Cumulative Preference shares of Rs. 50 each, Rs. 3,97,500 and 8,131 Ordinary shares of Rs. 25 each, Rs. 2,03,275. **Paid-up**—Rs. 5,06,412½ in 18 Deferred shares of Rs. 500 each fully paid, Rs. 9,000; 7,950, 5 per cent redeemable Cumulative Preference shares of Rs. 50 each fully paid up, Rs. 3,97,500 and 8,131 Ordinary shares of Rs. 25 each on which Rs. 12½ has been paid up, Rs. 1,01,637½. Less calls in arrears on 5% redeemable Preference Shares Rs. 1,725. The Preference shares are liable to be redeemed at the option of the Bank at any time after 31st July 1957 on giving 3 months' notice of the Bank's intention to do so.

This bank was started in a very modest way in the year 1937 and recently attained the status of a Scheduled Bank under the Reserve Bank of India Act. The shares are not yet quoted on the Stock Exchange and a first dividend of 3 per cent was paid to the Cumulative Preference shareholders in 1938 and 2½ per cent for 1939. A special feature is the representation of the depositors on the Board of Directors.

Dividends—payable half-yearly in July and January.

Capital—Authorised—Rs. 1,00,00,000 in 100,000 shares of Rs. 100 each. **Issued and Subscribed**—Rs. 50,00,000 in 50,000 shares of Rs. 100 each. **Paid up**—Rs. 31,46,422, *i.e.*, (1) Rs. 14,57,200 in 14,572 shares of Rs. 100 each fully paid up. (2) Rs. 14,17,120 in 35,428 shares of Rs. 100 each on which Rs. 40 has been called up. Less Calls unpaid Rs. 710. Add advance received on shares Rs. 2,72,812.

This bank has now been in existence for 46 years, having been founded owing to the zeal and initiative of the late Sardar Dyal Singh Majithia. Since its inception, it has weathered many financial storms from which it has emerged successfully. Today, apart from the Head Office at Lahore, there is a network of 63 branches, 9 sub-offices and 3 pay offices all over India. In 1922, the Capital of the Company was increased to its present figure by the creation of 50,000 shares of Rs. 100 each.

Jones, C.I.E., I.C.S., (*Governor and Deputy Governors and 4 directors—marked*—are appointed by the Central Government ; † representative of Central Government*).

Central Office—Bombay.

London Office—31-3, Bishopsgate, E.C. 2 (Telegrams : Reservebank Stock, London. Telephone : National 4260).

London Agents—Bank of England.

Accounts—to 30th June submitted in August : weekly statements issued.

Dividends— $3\frac{1}{2}$ per cent. per annum. Surplus payable to the Central Government at 30th June 1940, Rs. 20,53,972.

Capital—Authorised and Issued—Rs. 5,00,00,000 in shares of Rs. 100 each fully paid.

Reserve Fund—Rs. 5,00,00,000.

Deposits—Rs. 34,51,37,607.

Transfers, etc.—Shareholders must be Indian or Burman subjects domiciled in India or Burma or British subjects ordinarily resident in India or Burma. Shares must be held on Bombay, Calcutta, Delhi, Madras or Rangoon registers according to domicile but no shareholder may appear on more than one register nor hold more than 200 shares in his own name or jointly with another person or persons.

The Bank commenced to operate 1 April 1935. It transacts the Government business in India and Burma and has the sole right to issue notes in India and Burma Notes in circulation on 23rd August 1940, Rs. 2,33,38,92,000 (Rs. 2,21,10,43,000 in India and Rs. 12,28,49,000 in Burma). Banks in British India and Burma having a paid-up capital and reserves aggregating not less than Rs. 5 lakhs are scheduled to the above Act and must maintain a balance with the bank of not less than 5% of their demand liabilities and 2% of their time liabilities in India.

The terms as regards payment of dividends are as follows. After payment of a cumulative dividend of $3\frac{1}{2}$ per cent., part of the surplus profits is to be allocated to payment of an additional dividend as shown below and the balance paid to the Governor-General in Council, provided however that if the Reserve Fund is less than the capital at least Rs. 50,00,000 (or all the surplus if less than that amount) is to be placed to that fund ; so long as the share capital is Rs. 5,00,00,000 the amounts to be applied to the payment of additional dividend are as follows :—“ out of the first sum of Rs. 1,50,00,000 in excess of Rs. 4,00,00,000 $\frac{1}{24}$ th of such sum,” and out of each further excess sum of Rs. 1,50,00,000, one half of the fraction which was deducted from the Rs. 1,50,00,000 immediately preceding, provided that no additional dividend shall be paid which is not a multiple of $\frac{1}{8}$ %.

India and Burma.—Under the provisions of the Reserve Bank of India Act, 1934, the Reserve Bank of India has possessed the sole right to issue notes in British India since 1 April 1935 on which date the liability for the existing Government note issue, together with the corresponding assets, was transferred to the Bank. The Act requires that the note issue shall be fully covered by assets held for that purpose in the issue department of the Bank. At least 40% of such assets must consist of gold coin and bullion (the holding of which must at no time be less than Rs. 40 crores in nominal value) and sterling securities (which are limited to deposits at the Bank of England, United Kingdom Government securities maturing within 5 years, and bills of exchange drawn on and payable in the United Kingdom with a maturity not exceeding 90 days and bearing two or more good signatures) ; the remainder of the assets must consist of rupee coin and eligible rupee securities.

The requirements as to the minimum holding of gold coin and bullion and sterling securities may be temporarily suspended with the sanction of the Central Government subject to the payment of a graduated tax.

Burma ceased to be a part of British India on 1 April 1937 but the Reserve Bank of India continues, under the provisions of the India and Burma (Burma Monetary Arrangements) Order, 1937, to manage the currency of Burma as one with that of British India ; the notes issued in Burma are legal tender in Burma exclusively.

Financial Year—ends December 31. **Accounts published**—March.

Dividends payable—April.

Capital—Authorised—Rs. 50,00,000 in 10,00,000 shares of Rs. 5 each. **Issued and Subscribed**—Rs. 39,90,000 in 7,98,000 shares of Rs. 5 each.

The Union Bank of India was formed in the year 1919 with an original capital of Rs. 5,00,00,000. The optimistic ideas in this connection had to be amended in 1923 by reducing the nominal value of each share from Rs. 50 to Rs. 15 and again in 1925 a further re-construction of capital had to take place by reducing the nominal value of each share to Rs. 5. In the first few years the bank suffered very intense competition. It had also been unfortunate in some of its investments, one of which was the inflated value which was paid for its building. In the re-construction of capital, provision was made to write down these investments and also for the difference between the purchase price and market value of the building. Subsequently, a very steady business has been built up, in a conservative manner. In 1923 the Central Bank of India secured a controlling interest by purchasing a large block of shares and at the same time the managing agency was handed over to it. Last year, the financial year-ending was changed to the 31st December and the accounts presented this year were for nine months.

INSURANCE SECTION

Asian Assurance Company, Ltd.

(Regd. 1910.)

Directors—(1) Jamnadas M. Mehta, Esq., M.A., LL.B., Bar-at-Law, M.L.A., (*Chairman*); (2) Dr. A. G. Merchant, L.M. & S.; (3) Abdultyeb E. Maskati, Esq., J.P., (*Policy-holders' Director*); (4) Rai Bahadur Dr. Mathra Das Pahwa; (5) Dr. T. M. Kajiji, LL.D., Bar-at-Law., J.P. (*Ex-Officio.*)

Secretaries—Messrs. S. H. Mehta & Co., Ltd. **Manager**—C. G. Fozdar, Esq.

Registered Office—Asian Building, Nicol Road, Ballard Estate, Bombay.

Financial year—ends December 31. **Accounts**—published in June.

Dividends—payable in July.

Capital—Authorised—Rs. 50,00,000 in 2,00,000 Ordinary shares of Rs. 25 each. **Subscribed**—Rs. 22,57,950 in 90,318 shares of Rs. 25 each. **Paid-up**—Rs. 4,51,590 in 90,318 shares of Rs. 25 each, on which Rs. 5 is paid up.

This Company is principally a Life Office although a small Accident business has also been undertaken. Over recent years it has made quite remarkable progress, so much so that new business underwritten in 1939, was close on the Rs. 80 lakhs mark, against Rs. 76.84 lakhs in 1938, whilst the total sums now assured amount to Rs. 406 lakhs. During the past year, the capital was increased by offering the remaining unissued shares amounting to 59,277 to existing shareholders and policyholders. The response was entirely satisfactory.

This Company is a comparative newcomer into the field of Fire, Marine and Accident Insurance in this country having been established only five years ago. Nevertheless, the Balance Sheet bears the imprint of cautious management and orthodox policy.

On Fire Revenue Account the nett premiums for 1939 amounted to Rs. 1,54,983 against Rs. 96,948 for 1938, (nine months) whilst the loss ratio worked out at 20 per cent. compared to 26.3 per cent. in the previous period. On Marine Revenue Account the nett premiums for 1939, amounted to Rs. 24,634, against Rs. 5,861 for 1938, whilst the loss ratio worked out at 17.2 per cent. compared to 9.9 per cent. On the Accident Revenue Account, the nett premiums for 1939 amounted to Rs. 32,513 against Rs. 29,184, whilst the loss ratio was 80 per cent. compared to 27.5 per cent.

Financial Year—ends December 31. **Accounts**—published in August.

Dividends—payable in August.

Capital—Authorised and Subscribed—Rs. 50,00,000 in 1,00,000 Ordinary shares of Rs. 50 each. **Paid-up**—Rs. 10,00,000 in 1,00,000 Ordinary shares of Rs. 50 each, on which Rs. 10 per share is paid up.

This is a Fire, Marine, Accident and General Insurance office and Life business is not underwritten.

For the year ending December 31, 1939, nett premiums on Fire Account amounted to Rs. 5,93,208 compared to Rs. 5,95,306 for the same period in 1938, whilst the respective loss ratios are 38.67 per cent. and 38.54 per cent. On Marine Account, the nett premiums amounted to Rs. 2,07,336 against Rs. 2,07,279, with loss ratios of 100.98 per cent. and 98.21 per cent. respectively. On Accident and General Account the nett premiums were Rs. 5,44,948 compared to Rs. 6,00,038 with loss ratios of 50.55 per cent. and 42.08 per cent. The fall in the latter is attributed to a paucity of new car sales subsequent to the outbreak of war.

This old established and excellently managed life assurance office enjoys the confidence of both investors and policyholders. A very conservative policy has been followed from its inception and the Company has gone from strength to strength, so that the Balance Sheet position is extremely sound. For the past year, new business amounted to Rs. 157.65 lakhs compared to Rs. 137.31 lakhs in 1938, which was of 10 months' duration, whilst the total amount of assurances now in force reaches the impressive figure of Rs. 14.51 crores.

Mehta, Esq., J.P.; (6) Calian D. Vaidya, Esq., J.P.; (7) M. C. Ghia, Esq. (*Policyholders' Director*); (8) Jivanlal C. Setalvad, Esq. (*Managing Director*).

General Managers—V. C. Setalvad, Esq., B.A., LL.B., and K. C. Desai, Esq., B.A., LL.B.

Registered Office—Industrial Assurance Building, Opposite Churchgate Station, Bombay.

Financial year—ends December 31. **Accounts**—published in June.

Dividends—payable in July.

Capital—**Authorised**—Rs. 25,00,000 in 50,000 Ordinary shares of Rs. 50 each.

Subscribed—Rs. 18,22,500 in 36,450 Ordinary shares of Rs. 50 each. **Paid-up**—Rs. 2,18,700 made up of 36,450 Ordinary shares of Rs. 50 each on which Rs. 6 has been called up.

A special resolution was passed at an Extraordinary General Meeting held in July 1940, whereby the capital of the Company should be reduced from Rs. 25 lakhs, made up of 50,000 Ordinary shares of Rs. 50 each, to Rs. 10 lakhs made up of 50,000 Ordinary shares of Rs. 20 each. The reduction will be effected by reducing the nominal value of the shares from Rs. 50 to Rs. 20, and the uncalled liability of Rs. 30 extinguished.

This Life office which was established in the year 1913, found its business hampered by the Great War of 1914, but subsequently it has made impressive progress. For the year 1939, the Report discloses that new business amounted to Rs. 95.42 lakhs against Rs. 95.05 lakhs in the previous year, whilst the total amount of insurance now in force amounts to the large figure of almost Rs. 6 crores. The Company recently constructed its own building occupying a prominent position opposite Churchgate Station, at a cost of about Rs. 7,50,000.

The Company has a very low expense ratio, the same for 1939 being 27.4 per cent. against 28 per cent. in 1938.

Capital.—Authorised—Rs. 10,00,000 in 5,000 Ordinary shares of Rs. 200 each. **Issued Subscribed and Paid-up**—Rs.6,00,000 in 3,000 Ordinary shares of Rs. 200 each.

This can be described as the leading Life Insurance Company in this country and its balance sheet position is most impressive. The new business for 1939 amounted to Rs. 7.73 crores against Rs. 9.76 crores in 1938 and the total number of policies now in force is 4,03,323, assuring the stupendous figures of over Rs. 79½ crores. From the investors' standpoint, the shares are looked upon as the highest type of investment, a fact which is indicated by their quotation of about 20 times their par value.

Ahmedabad-Prantelj Railway Co., Ltd.

(Regd. 6th January 1896.)

Directors—(1) R. C. Lowndes, Esq. (Messrs. Killick Nixon & Co.), (*Ex-Officio Director and Chairman*); (2) Sir Purshotamdas Thakurdas, Kt., C.I.E., M.B.E.; (3) Ambalal Sarabhai, Esq.; (4) Sir Kikabhai Premchand, Kt.; (5) R. C. Giles, Esq.

Agents—Messrs. Killick Nixon and Company.

Registered Office—Home Street, Fort, Bombay.

Financial year—ends December 31. **Accounts**—published in February.

Dividends—payable in February and August.

Capital.—Authorised—Rs. 25,00,000 in 5,000 Ordinary shares of Rs. 500 each. **Issued and Subscribed**—Rs. 25,00,000 in 5,000 Ordinary shares of Rs. 500 each, fully paid.

Debentures—Rs. 11,00,000 in 6 per cent. (taxable) 2,200 Bonds of Rs. 500 each.

Issued January 1st, 1931. Repayable at par on December 31, 1946, with the option of repayment at any time on 6 months' notice. Interest payable on 1st January and 1st July.

This Company owns and operates two sections of railway. The main line which is metre-gauge is 55 miles in length and runs between Ahmedabad and the town of Himmatnagar. This was constructed in 1895 and was opened for traffic in 1897. The second section runs from Himmatnagar to Brahmakhed for a distance of 34 miles and so the total length of the Company's railway lines is 89 miles. The terms of acquisition by the Government lay down that the purchase price will be fixed at 25 times the average net earnings for the five years immediately preceding the 31st December 1930, subject to a maximum of 120 per cent. and a minimum of 100 per cent. of the actual capital expenditure on that date plus the actual capital expenditure subsequently up to December 31, 1946 which is the date when the lines can be acquired by the Government. These are worked by the B. B. & C. I. Railway on behalf of the Secretary of State and their charges are subject to a maximum of 60 per cent. of the gross earnings. In any year when the net earnings do not permit of a minimum return of 5 per cent. on the total capital expenditure the Secretary of State allows the Company by way of rebate such a sum as would, together with the net earnings of the said year make up 5 per cent. on the total capital expenditure, subject to its being limited to 10 per cent. of the gross earnings from interchanged traffic.

Central Provinces Railways Co., Ltd.

(Regd. November 10, 1910.)

Directors—(1) R. C. Lowndes Esq., (Messrs. Killick Nixon & Co.), (*Ex-Officio, Director and Chairman*) ; (2) Sir Purshotamdas Thakurdas, Kt., C.I.E., M.B.E. ; (3) Sir Byramjee Jeejeebhoy, Kt. ; (4) R. C. Giles, Esq. ; (5) The Senior Government Inspector of Railways, Circle No. 5, Bombay.

Agents—Messrs. Killick Nixon and Company.

Registered Office—Home Street, Fort, Bombay.

Financial year—ends September 30. **Accounts**—published in December.

Dividends—payable in January and July.

Capital.—Authorised—Rs. 1,00,00,000 in 1,00,000 Ordinary shares of Rs. 100 each. **Issued and Subscribed**—Rs. 94,00,000 in 94,000 Ordinary shares of Rs. 100 each fully paid.

In the year 1925 the Subscribed Capital was increased from Rs. 84,00,000 to the present figure by the issue of 10,000 shares of Rs. 100 each.

The objects for which this Company was formed were to construct feeder lines in the Central Provinces and it now owns about 140 miles of railways in three sections. (1) 48 miles from Ellichpur to Murtazapur, (2) 70 miles from Murtazapur to Yeotmal and (3) 22 miles from Pulgaon to Arvi. All the lines are of the 2' 6" gauge. The first was opened for traffic in 1913, the second in 1914-15 and the third in 1917. The Great Indian Peninsula Railway guarantees rebate out of the actual net receipts from traffic interchanged to make up 5 per cent. of the capital outlay and allows Rs. 21,000 per annum for office expenses when the company is on the surplus profits basis, but only Rs. 15,000 when rebate is claimed. It shares half of the surplus profits in excess of 5 per cent. The terms of acquisition lay down that the Secretary of State has the right to acquire the railway on March 31, 1947 or any 10th year thereafter on giving 12 months' notice. He will pay to the Company 25 times the average annual net earnings for the preceding three years, subject to a maximum of 120 per cent. and a minimum of 100 per cent. of the actual capital which has been expended. Additionally if it is decided to reconstruct the railway on a different gauge or to extend the line or to convert the line into a line of through communication and the Company fails to agree to such re-construction, Government will have the right to take over the railway on giving 12 months' notice and paying 25 times the average annual net earnings of the Company for the preceding 3 years subject in this particular case to a minimum of 115 per cent. of the actual capital expenditure.

Dhond Baramati Railway Company, Ltd.

(Regd. October 2, 1912.)

Directors—(1) Purushottam K. Godbole, Esq., (*Chairman*); (2) Sir Jamsetjee Jeejeebhoy, Bart; (3) A. H. Wadia, Esq.; (4) Nanabhai C. Broacha, Esq. (*Ex-Officio*).

Agents—Messrs. Shapoorji Godbole & Company.

Registered Office—50-56, Custom House Road, Fort, Bombay.

Financial year—ends March 31. **Accounts**—published in August.

Dividends—payable in January and September.

Capital.—Authorised—Rs. 12,50,000 in 12,500 Ordinary shares of Rs. 100 each.

Issued and Subscribed—Rs. 12,50,000 in 12,500 Ordinary shares of Rs. 100 each fully paid; Less Calls unpaid Rs. 400; Total Rs. 12,49,600.

The object for which this Company was formed was to construct a light railway of the 2' 6" gauge from Dhond Junction on the Great Indian Peninsula Railway to the town of Baramati in the Poona District for a distance of approximately 27 miles. This was opened for traffic in 1914. The G. I. P. Railway guarantees rebate out of the actual net proceeds from traffic interchanged to make up 5 per cent. on the capital outlay. It also allows Rs. 6,000 per annum for office expenses and shares half the surplus profit in excess of 5 per cent. The terms of acquisition lay down that the Secretary of State has the right to acquire the Railway on September 30, 1944 or any tenth year thereafter, on giving 12 months' notice and paying 25 times the average net profits for the preceding 3 years subject to a maximum of 120 per cent. and a minimum of 100 per cent. of the actual capital expenditure. Additionally there is a proviso that if it is decided to reconstruct the Railway on a different gauge or to extend the line or to convert the line into one of through communication and should the company fail to agree to such reconstruction, the Government will have the right to take over the Railway on giving 12 months' notice and in this case the terms of payment are 25 times the average annual net profits for the preceding three years, subject to a minimum of 115 per cent. of the actual capital expenditure.

Agents—Messrs. Killick Nixon and Company.

Registered Office—Home Street, Fort, Bombay.

Financial year—ends March 31. **Accounts**—published in July.

Dividends—payable in August and February.

Capital—Authorised—Rs. 50,00,000 in 50,000 Ordinary shares of Rs. 100 each.

Issued and Subscribed—Rs. 34,50,000 in 34,500 Ordinary shares of Rs. 100 each, fully paid.

Debentures—Rs. 18,00,000 (1) Rs. 9,00,000 in 1,800 $4\frac{1}{2}$ per cent. (Taxable) Bonds of Rs. 500 each. Issued in 1915, repayable in March 31st, 1944. Interest payable April 1 and October 1. (2) Rs. 9,00,000 in 90.7 per cent. (Taxable) Bonds of Rs. 10,000 each. Issued in April 1925 and July 1930, repayable in March 31, 1944. Interest payable April 1 and October 1.

Both the debentures may be redeemed earlier in the event of a special purchase of the Company's undertaking by the Secretary of State.

The object for which this Company was formed was to construct light railways of the 2'-6" gauge in Guzerat and adjoining districts. There are 3 sections so far constructed, (1) for a distance of 28 miles from Nadiad on the main line of the B. B. & C. I. Rly., to Kapadvanj and this was opened for traffic in 1913 ; (2) for a distance of 26 miles from Godhra on the Godhra-Ratlam Section of the B. B. & C. I. Rly., to Lunavada and this was opened for traffic between December 1913 and September 1914 ; and (3) for a distance of 31 miles from Champaner Road on the main line of the B. B. & C. I. Rly., to Pani Mines and this was opened for traffic between 1911 and 1916. In 1922, the Managing Agents handed over the working and maintenance of the lines to the B. B. & C. I. Rly., administration. The Secretary of State guarantees such a rebate as would, together with the net earnings of the year, make up 5 per cent. on the paid up capital, and so any profit in excess of 5 per cent. is shared equally between the Secretary of State and the Company. The terms of acquisition laid down that the Railway can be acquired on March 31, 1944 or any 10th year thereafter on

giving 12 months' notice and paying to the Company 25 times the average net earnings for the preceding 3 years (excluding payments on account of rebate) subject to a maximum of 120 per cent. and a minimum of 100 per cent. of the actual capital expenditure. Additionally, if it is decided to reconstruct the Railway on a different gauge or to extend the line or to convert the line into one of through communication and the company fails to agree to such reconstruction, the Government will have the right to acquire the railway on giving 12 months' notice and paying 25 times the average net earnings for the previous 3 years (excluding payment on account of rebate) subject to a minimum in this case of 115 per cent. of the actual capital.

Hoshiarpur-Doab Branch Railways Company, Ltd.

(Regd. February 29, 1914.)

Directors—(1) T. S. Gladstone, Esq., (*Chairman*); (2) Biren Mookerjee, Esq.; (3) Sir Adamjee Hajee Dawood, Kt.; (4) K. B. Lal, Esq., (*Ex-Officio Government Director*); (5) A. J. Elkins, Esq.

Managing Agents—Messrs. Gillanders, Arbuthnot and Company.

Registered Office—Clive Buildings, Calcutta.

Financial year—ends March 31. **Accounts**—published in August.

Dividends—payable in January and August.

Capital.—**Authorised**—Rs. 65,00,000 in 65,000 Ordinary shares of Rs. 100 each. **Issued and Subscribed**—Rs. 65,00,000 in 65,000 Ordinary shares of Rs. 100 each, fully paid.

In 1927 the capital of the Company was increased from Rs. 57,00,000 to its present figure by the creation and issue of 8,000 shares of Rs. 100 each.

This Company was formed to construct three sections of railways in the Punjab; (1) for a distance of 45 miles from Jullunder on the North-Western Railway to Mukerin *via* Tanda, (2) for a distance of 28 miles from Phagwara on the North-Western Railway to Rahon *via* Nawashahr and (3) for a distance of 19 miles from Nawashahr to Jaijon. The first two lines were opened for traffic in 1915 and the third in 1917. The North-Western Railway guarantees a rebate out of the actual total of the net receipts from traffic interchanged to make up 5 per cent. of the capital outlay and it also pays the Company for office expenses a sum Rs. 12,000 per annum and shares half the surplus profits in excess of 5 per cent. The terms of acquisition lay down that the Secretary of State has the right to acquire the railway on March 31, 1946, or any 10th year thereafter on giving 12 months' notice and paying 25 times the average net earnings for the preceding 3 years, subject to a maximum of 120 per cent. and a minimum of 100 per cent. of the actual capital expenditure. Additionally, if it is decided to reconstruct the railway on a different gauge or to extend the line or to convert the line into a line of through communication and the Company fails to agree to such re-construction, Government will have the right to take over the railway on giving 12 months' notice and paying 25 times the average annual net earnings of the Company for the preceding 3 years subject in this particular case to a minimum of 115 per cent. of the actual capital expenditure.

Mandra-Bhon Railway Company, Ltd.

(Regd. November 13, 1913.)

Directors—(1) R. C. Giles, Esq. (Messrs. Killick Nixon & Co.), (*Ex-Officio Director and Chairman*); (2) Sir Purshotamdas Thakurdas, Kt., C.I.E., M.B.E.; (3) Ambalal Sarabhai, Esq.; (4) Sir Chunilal V. Mehta, K.C.S.I.; (5) R. C. Lowndes, Esq.; (6) The Senior Government Inspector of Railways, Circle No. 5, Bombay.

Agents—Messrs. Killick Nixon & Company.

Registered Office—Home Street, Fort, Bombay.

Financial year—ends September 30. **Accounts**—published in December-January.

Dividends—payable in January and July.

Capital.—Authorised—Rs. 50,00,000 in 50,000 Ordinary shares of Rs. 100 each.

Issued and Subscribed—Rs. 27,50,000 in 27,500 Ordinary shares of Rs. 100 each, fully paid.

This Company was formed to construct a light broad-gauge railway connecting Mandra, a station on the North-Western Railway between Wazirabad and Rawalpindi, and Bhon, which is approximately a distance of 46½ miles. The line was opened for traffic between 1915 and 1916. The North-Western Railway guarantees a rebate out of the actual net profits from traffic interchanged to make up 5 per cent. of the capital outlay and allows Rs. 7,200 per annum for office expenses and shares half of the surplus profits in excess of 5 per cent. The terms of acquisition lay down that the line can be acquired on March 31, 1947 or any 10th year thereafter on giving 12 months' notice and paying to the Company 25 times the average net earnings for the preceding 3 years (excluding payments on account of rebate), and subject to a maximum of 120 per cent. and a minimum of 100 per cent. of the actual capital expenditure. Additionally, if it is decided to reconstruct the railway on a different gauge or to extend the line or to convert the line into a line of through communication and the Company fails to agree to such re-construction, Government will have the right to take over the railway on giving 12 months' notice and paying 25 times the average annual net earnings of the Company for the preceding 3 years, subject in this particular case to a minimum of 115 per cent. of the actual capital expenditure.

Mymensingh-Bhairab Bazar Railways Company, Ltd.

(Regd. April 1, 1915.)

Directors—(1) T. S. Gladstone, Esq. ; (2) R. C. Lowndes, Esq. ; (3) Biren Mookerjee, Esq. ; (4) Sir Adamjee Hajee Dawood, Kt. ; (5) K. B. Lal, Esq. (*Ex-Officio Government Director*) ; (6) A. J. Elkins, Esq.

Managing Agents—Messrs. Gillanders, Arbuthnot and Company.

Registered Office—Clive Buildings, 8, Clive Street, Calcutta.

Financial year—ends March 31. **Accounts**—published in August.

Dividends—payable in January and August.

Capital—Authorized—Rs. 1,00,00,000 in 1,00,000 shares of Rs. 100 each.

Issued and Subscribed—Rs. 86,00,000 made up of (1) 63,000 Guarantee shares of Rs. 100 each fully paid=Rs. 63,00,000 and (2) 23,000 Rebate shares of Rs. 100 each=Rs. 23,00,000.

Debentures—Authorised and Issued—Rs. 20,00,000 in 2,000 4 per cent. (Taxable) Bearer Bonds of Rs. 1,000 each. Issued at par on February 1, 1935. Redeemable at par on April 1, 1955, with option to repay on any interest date after April, 1940, on six months' notice from the Company. Interest payable on April 1 and October 1.

The shares are divided in two classes 'Guarantee' and 'Rebate'. The former carry a guarantee from the Government of India of $3\frac{1}{2}$ per cent. per annum and are a Trustee Investment.

The nett earnings of the Company are divided between the Guarantee and Rebate shares in the proportion of 63/86 and 23/86 respectively. When the Rebate shares proportion of the nett earnings is less than 5 per cent. on the Rebate capital, the balance is paid as rebate by the Assam-Bengal Railway and Eastern Bengal Railway up to a maximum of 23/86 of the nett receipts derived from traffic interchanged by these two Railways with the Mymensingh Bhairab Bazar Railways Co., Ltd.

If and whenever the nett receipts of the Company for any year shall exceed the sum required to pay (a) the management expenses and (b) interest at 5 per cent. per annum on the share capital of the Company the excess shall be divided equally between the Company and the working agency ; the share of the latter being further divisible between the working agency and the Secretary of State.

The Company owns (1) a main line running from Mymensingh on the East Bengal Railway to Bhairab Bazar station on the Assam-Bengal Railway, (2) two branch lines one

from Gourigram to Netrokona via Shamganj and the second from Shamganj to Jheria Jhanjail. The first is a distance of 72 miles, the second 15 miles, and the third 13 miles. The lines are worked by the Assam Bengal Railway and a cost thereof is arrived at by taking the ratio of the working expenses of the Assam Bengal Railway and those of the Mymensingh Bhairab Bazar Railway to their joint gross earnings, or 50 per cent. of the gross earnings of the Mymensingh Bhairab Bazar Railway Co., Ltd. whichever is less.

The Secretary of State has the right to acquire the railway in 1948 or any 10th year thereafter on giving 12 months' notice and paying 25 times the average net earnings for the preceding 3 years, subject to a maximum of 120 per cent. and a minimum of 100 per cent. of the actual capital expenditure. Additionally, if it is decided to reconstruct the railway on a different gauge or to extend the line or to convert the line into a line of through communication and the Company fails to agree to such reconstruction, Government will have the right to take over the railway on giving 12 months' notice and paying 25 times the average annual net earnings of the Company for the preceding 3 years subject in this particular case to a minimum of 115 per cent. of the actual capital expenditure.

Sara-Sirajganj Railway Company, Ltd.

(Regd. September 24, 1913.)

Directors—(1) T. S. Gladstone, Esq., (*Chairman*) ; (2) Neil Brodie, Esq. ; (3) R. C. Lowndes, Esq. ; (4) Biren Mookerjee, Esq. ; (5) Dr. Narendra Nath Law, M.A., B.L., Ph. D. ; (6) K. B. Lal, Esq., (*Ex-Officio Government Director*) ; (7) A. J. Elkins, Esq.

Managing Agents.—Messrs. Gillanders, Arbuthnot & Co.

Registered Office—Clive Buildings, Calcutta.

Financial year—ends March 31. **Accounts**—published in September.

Dividends—payable in January and September.

Capital.—**Authorised**—Rs. 1,10,00,000 in 1,10,000 Ordinary shares of Rs. 100 each. **Issued and Subscribed**—Rs. 95,00,000 in 95,000 Ordinary shares of Rs. 100 each, fully paid.

In 1926 the Issued and Subscribed Capital was increased from Rs. 80,00,000 to Rs. 95,00,000 by the creation and issue of 15,000 shares of Rs. 100 each.

This Company was formed to construct a Railway of the 5' 6" gauge from Ishurdi on the Eastern Bengal Railway near Sara, to Sirajganj, with an extension to Mahadeopur which is a distance of about 54 miles. The line was opened for traffic between 1915 to 1916 and the extension to Mahadeopur in 1934. The Eastern Bengal Railway guarantees rebate out of the actual net receipts from the traffic interchanged to make up 5 per cent on the capital outlay and it also pays to the company by way of office expenses etc. Rs. 15,000 per annum and such other actual expenses and shares half the surplus profits of the Company in excess of 5 per cent.

The terms of acquisition lay down that the Secretary of State has the right to acquire the railway on September 30, 1946, or any tenth year thereafter, on giving 12 months' notice and paying 25 times the average net profits for the preceding 3 years subject to a maximum of 120 per cent and a minimum of 100 per cent of the actual capital expenditure. Additionally, there is a proviso that if it is decided to reconstruct the railway on a different gauge or to extend the line or to convert the line into one of through communication and should the Company fail to agree to such reconstruction, the Government will have the right to take over the railway on giving 12 months' notice and in this case the terms of payment are 25 times the average annual net profits for the preceding three years, subject to a minimum of 115 per cent. of the actual capital expenditure.

Sialkot Narowal Railway Co., Ltd.

(Regd. 1914.)

Directors—(1) R. C. Giles, Esq. (Messrs. Killick, Nixon & Co.), (*Ex-Officio Director and Chairman*); (2) Sir Purshotamdas Thakurdas, Kt., C.I.E., M.B.E., Bombay; (3) Ambalal Sarabhai, Esq., Ahmedabad; (4) R. C. Lowndes, Esq., Bombay; (5) Sir Byramjee Jeejeebhoy, Kt., Bombay; (6) The Senior Government Inspector of Railways, Circle No. 5, Bombay.

Agents—Messrs. Killick, Nixon & Co. **Registered Office**—Home Street, Fort, Bombay.

Financial year—ends September 30. **Accounts**—published in January.

Dividends—payable in January and August.

Capital.—Authorised—Rs. 35,00,000 in 35,000 Ordinary shares of Rs. 100 each.

Subscribed—Rs. 31,60,000; made up of 30,000 shares of Rs. 100 each, fully paid—Rs. 30,00,000 and 4,000 shares of Rs. 100 each on which Rs. 40 has been paid up—Rs. 1,60,000.

In February 1917, the Issued Capital of the Company was increased from Rs. 27,50,000 to Rs. 30,00,000, by the issue of 2,500 new shares of Rs. 100 each. In 1935, the Issued and Subscribed Capital was increased to its present figure by the issue of 4,000 shares of Rs. 100 each at par.

The Company was formed to construct a branch Railway of approximately 39 miles in length from Sialkot on the Wazirabad-Jammu Branch of the North Western Railway to Narowal and it was opened for traffic between 1915 and 1916. Subsequently, the Government of India through State Agency, constructed chord lines communicating Narowal with the North-Western Railway Main line at Shahdara and Amritsar. These were opened for traffic in 1926 and 1929 respectively and so there is now through communication between the South-East Punjab and the Kashmir State.

The terms of acquisition lay down that the Secretary of State has a right to acquire the Railway on March 31, 1946 or any tenth year thereafter, on giving 12 months' notice and paying 25 times the average net profits for the preceding 3 years subject to a maximum of 120 per cent. and a minimum of 100 per cent. of the actual capital expenditure. Additionally, there is a proviso that if it is decided to reconstruct the Railway on a different gauge or to extend the line or to convert the line into one of through communication and should the Company fail to agree to such reconstruction, the Government will have the right to take over the Railway on giving 12 months' notice and in this case the terms of payment are 25 times the average annual net profits for the preceding three years, subject to a minimum of 115 per cent. of the actual capital expenditure.

Managing Agents—Messrs. Forbes, Forbes, Campbell and Company, Ltd.

Registered Office—Corner of Bunder Road and Dunolly Road, Karachi.

Financial year—ends March 31. **Accounts**—published in June.

Dividends—payable in June and November.

Capital.—Authorised—Rs. 4,64,000 in 16,000 Ordinary shares of Rs. 29 each.

Issued and Subscribed—Rs. 4,64,000 in 16,000 Ordinary shares of Rs. 29 each fully paid.

The capital of the Company was reduced to the present figure in 1928 by reducing the nominal value of each share from Rs. 100 to Rs. 29. The balance of Rs. 71 on each share was returned to the shareholders.

Originally this Company owned 2 sections of railways. The first was from Mirpur Khas, through Jamrao Junction (46 miles east of Hyderabad, Sind), south to Jhudo, a distance of approximately 50½ miles. This was acquired by the Government on 31st December 1928, for Rs. 11,48,290, and so the capital of the Company was reduced to its present figure, as already mentioned, by returning Rs. 71 per share to the shareholders. The second section which is now being operated runs from Mirpur Khas to Khadro for about a distance of 50 miles. This was opened for traffic on January 1, 1912, and was constructed by the Secretary of State on behalf of the Company through the agency of the Jodhpur-Bikaner Railway which is now known as the Jodhpur Railway, and maintains the company's line (including the supply and use of the necessary rolling-stock) and charges only 40 per cent. of the gross earnings, without in any way sharing in the profits. The Company is thus entitled to receive the entire balance of the gross earnings. In the year 1939, these terms were altered after the line was extended to Nawabshah. This extension does not form part of the Company's property. The working expenses will be 60 per cent. but Government have guaranteed that the gross earnings will not be less than the average of the three financial years 1934-35, 1935-36, 1936-37. The Company receives no guarantee of any description or other concession beyond the free grant of land, and the Secretary of State, on giving twelve months' notice of his intention, has the right to purchase the Mirpur Khas-Khadro section on the 31st December, 1942, or at the expiration of any subsequent period of ten years. The terms of purchase are fixed at twenty-five times the average net earnings derived by the Company for the three years immediately preceding the purchase, subject to a maximum of 120 per cent. of the capital expenditure and to a minimum of the capital expenditure.

Further in the event of it being determined to reconstruct the railway on a different gauge or to convert the line into a line of through communication or to extend the line and the Company failing to agree to such reconstruction, the Government will have the right to acquire the railway on giving 12 months' notice and paying 25 times the average annual net profits of the Company for preceding three years and subject to a minimum of 115 per cent. of the actual Capital Expenditure by the Company.

Tapti Valley Railway Co., Ltd.

(Regd. June 15, 1896.)

Directors—(1) R. C. Lowndes, Esq., (Messrs. Killick Nixon & Co.) (*Ex-Officio Director and Chairman*) ; (2) Sir Purshotamdas Thakurdas, Kt. C.I.E., M.B.E. ; (3) Dr. C. A. Mehta ; (4) Chimanlal D. Clerk, Esq. ; (5) R. C. Giles, Esq.

Agents—Messrs. Killick Nixon and Company.

Registered Office—Home Street, Fort, Bombay.

Financial year—ends December 31. **Accounts**—published in March.

Dividends—payable in March and September.

Capital—Authorised—Rs. 1,35,00,000 in 27,000 Ordinary shares of Rs. 500 each.
Issued and Subscribed—Rs. 1,31,73,000 in 26,346 Ordinary shares of Rs. 500 each fully paid.

The railway, which is of 5' 6" guage, runs along the Tapti Valley in Guzerat and is 156 miles in length. It is important because it connects the port of Surat with the plains of Khandeish and brings Guzerat into direct railway communication with Central India. The terminal stations are Surat and Amalner and the line was opened for traffic between 1898 and 1900. The Secretary of State did not avail himself of the option of acquiring the line on March 31, 1932, so he now has the option of doing so on March 31, 1942 or on March 31, 1951. If the line is purchased on the last date the price is fixed at the actual capital expenditure but if it is acquired in 1942, then the price will be 25 times the average net earnings during the preceding 5 years, subject to a maximum of 120 per cent. of the capital expenditure. The Company's line is worked and maintained by the B. B. & C. I. Rly., at a charge of not more than 55 per cent. of the gross earnings and the Secretary of state guarantees by way of rebate such sum as would together with net earnings of the year make up to 50 per cent. on the capital expenditure. This rebate is, however, limited to 45 per cent. of the gross earnings for the year from interchanged traffic.

Dividends—payable in August and December.

Capital—Authorised and Subscribed—Rs. 22,00,000 in 22,000 Ordinary shares of Rs. 100 each fully paid.

This Company was formed to construct a feeder railway between Jacobabad (Sind) on the North Western Railway, and Kushmore, which is a distance of about 77 miles to the east. It was first opened for traffic in December 1914.

The Secretary of State has the option to purchase the line on the 31st March, 1945, or on the 31st March in the last year of any subsequent period of ten years on giving twelve months' notice of his intention to do so. The price fixed is a sum equal to 25 times the average yearly net earnings of the railway during the three years immediately preceding the date on which the contract shall be so determined, subject to a limit of 20 per cent. in excess of, but not less than the total capital expenditure of the Company. Further in the event of it being determined to reconstruct the railway on a different gauge or to convert the line into a line of through communication or to extend the line and the Company failing to agree to such reconstruction, the Government will have the right to acquire the railway on giving 12 months' notice and paying 25 times the average annual net profits of the Company for preceding three years and subject to a minimum of 115 per cent. of the actual Capital Expenditure by the Company.

Agents—Messrs. Killick, Nixon & Co.

Registered Office—Home Street, Fort, Bombay.

Financial year—ends September 30. **Accounts**—published in January-February.

Dividends—payable in February and August.

Capital—Authorised—Rs. 1,50,00,000 in 1,50,000 Ordinary shares of Rs. 100 each. **Issued and Subscribed**—Rs. 63,75,000 in (i) 57,625 Ordinary shares of Rs. 100 issued for cash and fully paid, Rs. 57,62,500 ; (ii) 2,375 Ordinary shares of Rs. 100 issued to Promoters as fully paid, Rs. 2,37,500 and (iii) 15,000 Ordinary shares of Rs. 100 each, Rs. 25 paid up on each share, Rs. 3,75,000.

Debentures—Rs. 15,00,000 in 30, 5% Bonds of Rs. 50,000 each. Issued in 1934, in two instalments of 15 each on June 15 and October 15, 1934 to be repaid after 10 years. Interest payable half yearly in March and September.

As can be seen from the various issues of capital detailed hereunder, this Company has gone ahead progressively since its inception. In the year 1923, the Authorised Capital was increased from Rs. 15,00,000 to Rs. 30,00,000 by the creation of 15,000 Ordinary Shares of Rs. 100 each, of which 3,789 shares were issued. In 1933, the Issued Capital was increased to Rs. 22,17,065 by the issue of 11,211 shares of Rs. 100 each at par. In 1934, the Authorised Capital was increased to Rs. 75,00,000 by the creation of 45,000 Ordinary shares of Rs. 100 each, of which 15,000 shares were offered at par to the original shareholders in the proportion of one new share for every two held. In 1936, there was a further increase in the Issued and Subscribed Capital by the issue of 15,000 Ordinary shares of Rs. 100 each at par to the existing shareholders, in the proportion of one such share for every three held on August 18, 1936 and again in 1938, the Issued and Subscribed Capital went up by another issue of 15,000 Ordinary shares at par to the existing shareholders in the proportion of one such share for every four held. In 1940, it was considered advisable to increase the Authorised Capital from Rs. 75,00,000 to Rs. 1,50,00,000 by the creation of 75,000 new Ordinary shares of Rs. 100 each.

The Company was formed to take up the license granted by Government under the Indian Electricity Act, 1910, to supply Electrical energy to the City of Ahmedabad and District. In order to cope with the increasing demand for electricity for every purpose and to supply the mill industry with energy, the Company took over "The Ahmedabad Power Electric License 1928" from the Licensees in 1933. A new generating station was built at Sabarmati 3 miles from the centre of the City, and was put into service in November, 1934.

Dividends—payable in April and October.

Capital—Authorized—Rs. 3,90,00,000 in 600,000 Ordinary shares of Rs. 50 each, Rs. 3,00,00,000 and in 180,000, 7% (Tax-free) Cumulative Preference shares of Rs. 50 each, Rs. 90,00,000. **Issued and Subscribed**—Rs. 3,89,19,450 in 5,98,389 Ordinary shares of Rs. 50 each fully paid up, Rs. 2,99,19,450 and in 180,000 7% (Tax-free) Cumulative Preference shares of Rs. 50 each, Rs. 90,00,000.

Debentures—The Company had Debentures of Rs. 1,00,00,000 half of which were repaid on July 1, 1935, and the other half on October 1, 1938.

In April 1936, the Issued Capital of the Company was increased from Rs. 3,60,00,000 to its present figure by the issue of 58,316 Ordinary shares of Rs. 50 each at Rs. 72 per share to the existing shareholders in proportion of one share for every nine shares held. These shares rank *pari passu* with the existing shares of the Company in all aspects.

The Company was formed to acquire the undertaking and all or any of the assets and liabilities of the Bombay Electric Supply and Tramways Co., Ltd., incorporated in England in 1905, including the benefit of a deed of Concession dated August 7, 1905, between the Municipal Corporation of the city of Bombay of the first part, W. D. Sheppard (Municipal Commissioner of the city of Bombay) of the second part, the Brush Electrical Engineering Co., Ltd., of the third part, and the Bombay Electric Supply and Tramways Co., Ltd., of the fourth part to acquire certain Licences granted to the Brush Electrical Engineering Co., Ltd. and the Bombay Electrical Supply Co., Ltd. Supply commenced 11th September 1905. The Tramways Service commenced 7th May 1907. The Concession is in perpetuity but with power to the Municipality or Local Government to purchase the undertaking on 7th August 1947 or 1961 or any 7th year thereafter at the "Bona fide" value of the property without any compensation beyond Rs. 40,00,000 for goodwill if the purchase takes place in 1947

or Rs. 20,00,000 if in 1961. A rental varying from Rs. 3,000 per double track mile of original line to Rs. 1,000 per single track mile of extensions is payable to the Municipality. Power is purchased in bulk from the Tata Hydro-Electric Companies.

Geddis, Esq.; (7) Dharamsey M. Khatau, Esq.; (8) Haridas Madhavdas, Esq.; (9) Col. Kumar Shivraj Singh, (*Special Director*.)

Agents—Messrs. Tata Hydro-Electric Agencies, Ltd.

Registered Office—Bombay House, 24, Bruce Street, Fort, Bombay.

Financial year—ends June 30. **Accounts**—published in September.

Dividends—payable in March and September.

Capital.—Authorised—Rs. 3,00,00,000 in (1) 1,80,000 Ordinary shares of Rs. 100 each, Rs. 1,80,00,000 and in (2) 1,00,000 7% (Taxable) Cumulative Preference shares of Rs. 100 each, Rs. 1,00,00,000 and (3) 20,000 shares to be issued as Preference or Ordinary or both as decided upon, Rs. 20,00,000. **Issued**—Rs. 2,80,00,000 in (1) 1,80,000 Ordinary shares of Rs. 100 each, Rs. 1,80,00,000 and (2) 1,00,000 Cumulative 7% (Taxable) Preference shares of Rs. 100 each, Rs. 1,00,00,000. **Subscribed and Paid-up**—Rs. 2,69,28,000 in (1) 1,80,000 Ordinary shares of Rs. 100 each, Rs. 1,80,00,000 and (2) 89,280 Cumulative 7% (Taxable) Preference shares of Rs. 100 each, Rs. 89,28,000.

Debentures—Issued Rs. 1,50,00,000 in 1933. Now outstanding Rs. 1,16,89,100 in bonds of Rs. 100 each. Repayable April, 1941. Interest 6 per cent. (Taxable) payable on April 1 and October 1.

In 1930 the shares of the Company of Rs. 1,000 each were sub-divided into ten shares of Rs. 100 each.

The Company advanced a loan of Rs. 1 crore to the Tata Power Company Limited, repayable in one sum in April 1941, with interest at 6% plus an additional $\frac{1}{2}$ % on Rs. 50,00,000 which is this Company's portion of the loan.

This Company is the oldest of the three large Hydro-electrical undertakings in the Bombay Presidency. It was started originally in 1915 and the hydraulic works are situated near Lonavla at the top of the Bhore Ghats. The Power House is situated at Khopoli at the foot of the Ghats and the normal capacity is 64,300 Horse Power. In conjunction with the other two electric supply companies, electrical energy is supplied to the Bombay Electric Supply and Tramways Company, Ltd., the majority of the mills, and other industries in Bombay City, the B. B. & C. I. Railway for their Suburban electrification, the whole of the energy required by the G. I. P. Railway in Bombay city and for their main line traction up to Kalyan, the whole of the electrical energy required by the Poona Electric Supply Company and the distributing Licensees in Thana, Kalyan and the Bombay Suburban district.

Agents—Messrs. E. D. Sassoon & Co., Ltd.

Registered Office—E. D. Sassoon Building, Dougall Road, Ballard Estate, Bombay.

Financial year—ends December 31. **Accounts**—published in July.

Dividends—payable in July.

Capital—**Authorized and Subscribed**—Rs. 50,00,000 in 25,00,000 shares of Rs. 2 each fully paid.

In 1939 the capital of the Company was first reduced from Rs. 25,00,000 to Rs. 1,00,000 by reducing the nominal value of each share from Rs. 50 to Rs. 2. The capital was then increased to its present figure by the creation and issue of 24,50,000 shares of Rs. 2 each. These shares were issued as fully paid-up, in satisfaction of the liability of the Company to the Managing Agents.

Debentures—Rs. 20,00,000 in 40,000, 7% (Tax-free) Bearer Bonds of Rs. 50 each, issued in 1925. These were repaid at par in 1939.

The Mill consists of 45,500 spindles and 896 looms and is situated at DeLisle Road, Chinchpoogli, Bombay.

The Mill consists of 62,716 spindles and 1,908 looms and is situated at Tulse Pipe Line Road, DeLisle Road, Bombay. The Mill was formerly known as Fazulbhoy Mills, Ltd.

The Mill was acquired in the end of 1934, but commenced working in 1935. The Company installed an up-to-date Dyeing and Bleaching Plant in a nice building on an adjoining plot of land measuring 11,258 sq. yards specially purchased for that purpose. Printing Plant has also been installed recently. Many alterations and additions have been effected. Old Spinning Frames have been replaced with new ones. A complete new Blow-Room was also installed in 1937. Mills' working is improving steadily.

Secretaries—Imperial Chemical Industries (India), Ltd. **Registered Office**—18, Strand Road, Calcutta.

Financial Year—ends June 30. **Accounts**—published in November.

Dividends—payable in December.

Capital—Authorised—Rs. 5,00,00,000; Rs. 3,35,00,000 in 33,50,000 Ordinary shares of Rs. 10 each, and Rs. 1,65,00,000 in 1,65,000 5% (Tax-free) Cumulative Preference shares of Rs. 100 each. **Issued and Subscribed**—Rs. 74,40,000 made up of 4,34,000 Ordinary shares of Rs. 10 each—Rs. 43,40,000 and 31,000 5% (Tax-free) Cumulative Preference shares of Rs. 100 each—Rs. 31,00,000. **Paid-up**—Rs. 35,34,000 made up of 4,34,000 Ordinary shares of Rs. 10 each on which Re. 1 has been paid up, Rs. 4,34,000, and 31,000 5% (Tax-free) Cumulative Preference shares of Rs. 100 each.

The Preference shares carry preferential rights both as regards dividend and repayment of capital but they have no further right to participate in the profits or assets. Each Preference share allotted, however, has the option to take up 6 Ordinary shares at par in exchange not before January 1, 1941 and not after June 30, 1941. The Secretaries, Imperial Chemical Industries (India) Ltd., have undertaken to provide sufficient funds each half-year to enable the Company to pay the Preference dividend in full for a period of five years from April 1, 1938 and these payments will not constitute a liability on this Company and will not be repayable to Imperial Chemical Industries (India) Ltd.

The objects for which the Company was formed, were, *inter alia*, to develop the heavy chemical industry throughout India and to manufacture Alkalis, in particular Sodium Ash, Caustic Soda and Chlorine. The Soda Ash factory is situated at Khewra in the Jhelum District of Punjab whilst Caustic Soda and Chlorine will be produced by the factory erected near Calcutta which has commenced production.

Financial Year—ends July 31. **Accounts**—published in January.

Dividends—payable in January.

Capital—Authorised—Rs. 8,00,00,000 in 8,00,000 Ordinary shares of Rs. 100 each. **Issued and Subscribed**—Rs. 7,05,42,100 in 7,05,421 Ordinary shares of Rs. 100 each fully paid.

Debentures—Rs. 7,50,000 less redeemed Rs. 3,45,000, now outstanding Rs. 4,05,000, in 5½% (Taxable) bonds of Rs. 1,000 each issued at par on 1st March 1937 repayable by annual drawings on 1st March, secured by charge on fixed assets of the Wah Works.

The Company was formed in 1936 to take over by amalgamation the business and assets of the undernoted concerns which went into voluntary liquidation in July and November 1937:—(1) The Indian Cement Company, Ltd., (2) The Katni Cement and Industrial Co. Ltd., (3) Bundi Portland Cement Ltd., (4) The Okha Cement Co. Ltd., (5) The Gwalior Cement Company Ltd., (6) The Punjab Portland Cement Co. Ltd., (7) The United Cement Co. Ltd., (8) The Shahabad Cement Co. Ltd., (9) The Coimbatore Cement Co. Ltd., (10) The Dewarkhand Cement Co. Ltd., (11) The C. P. Cement Co. Ltd.

The present position of the Company is that it owns the various works of the above concerns which are situated as follows:—(1) The Indian Cement Works at Porbandar in Kathiawar; (2) The Katni Cement Works located close to Katni Junction on the Jubbulpore Section of the G. I. P. Railway. These Works manufacture in addition to cement, tiles, firebricks, bauxite, fireclay, French chalk, stoneware pipes and fittings; (3) The Bundi Cement Works at Lakheri, Rajputana, B. B. & C. I. Railway; (4) The Gwalior Cement Works at Banmore, G. I. P. Railway, in the Gwalior State; (5) The Okha Cement Works at Dwarka in Kathiawar; (6) The Punjab Cement Works at Wah, N. W. Railway, in the Attock District; (7) The United Cement Works at Mehgaon *via* Jukehi, G. I. P. Railway in the Jubbulpore District; (8) The Shahabad Cement Works at Shahabad, G. I. P. Railway in H. E. H. the Nizam's Dominions; (9) The Coimbatore Cement Works at Madukarai, in the Madras Presidency; (10) The Dewarkhand Cement Works at Khalari in Behar; (11) The C. P. Cement Works at Kymore, C. P., *via* Jukehi, G. I. P. Railway in the Jubbulpore District. In

order further to cater for India's requirements of cement, additional factories have been opened. A 70,000 ton factory has been erected at Rohri in Sind and the Kistna Cement Works have been constructed near Bezwada on the East Coast, also of 70,000 tons capacity. Then, the Bhupendra factory near Kalka in Patiala State, of 100,000 tons capacity, has been working for 12 months and a subsidiary company known as the Patiala Cement Company Ltd. with an Issued Capital of Rs. 64 lakhs was formed to take over the assets of these Works. The greater part of this share capital is held by the Associated Cement Companies Ltd. Additionally, it owns the entire share capital of the Cement Marketing Company of India Ltd. and has a substantial interest in the Burma Cement Company Ltd., holding 40% of the shares.

Belapur Company, Limited.

(Regd. October 27, 1919.)

Directors :—(1) Sir Purshotamdas Thakurdas, Kt., C.I.E., M.B.E. (*Chairman*) ; (2) Sir Kikabhai Premchand, Kt. ; (3) Sir Byramjee Jeejeebhoy, Kt. ; (4) D. Moir, Esq. ; (5) A. H. Baker, Esq. (Alternate Director in place of Sir Joseph Kay, Kt., J.P.).

Managers—Messrs. W. H. Brady & Co., Ltd. **Registered Office**—Royal Insurance Buildings, Churchgate Street, Fort, Bombay.

Financial Year—ends September 30. **Accounts**—published in December.

Dividends—payable in January.

Capital—Authorised—Rs. 40,00,000 in 80,000 Ordinary shares of Rs. 50 each. **Issued and Subscribed**—Rs. 37,59,800 in 75,196 shares of Rs. 50 each fully paid.

In the year 1924, the capital was reduced to Rs. 30 lakhs from Rs. 40 lakhs by reducing the nominal value of each share by Rs. 25, from Rs. 100 to Rs. 75. Again, in the year 1927, a further reduction was made from Rs. 30 lakhs to Rs. 20 lakhs by writing down the nominal value of the shares from Rs. 75 to Rs. 50. In 1935, the capital was increased to its present figure by the capitalisation of Rs. 18,79,900 from the Reserve Fund and thereby creating 37,598 new shares of Rs. 50 each which were distributed as bonus to existing shareholders, in the proportion of one share for every one held.

This Company, after many years of vicissitudes, can now be said to be on a very firm footing with finances in excellent condition. It owns a sugar factory at Harigaon near Belapur, on the Dhond-Manmad section of the G. I. P. Railway. The crushing capacity amounts to 650 tons of cane per day and the Company does not have to rely upon outside sources of cane supply, as it has its own plantations upon which much care has been spent in their cultivation, so much so that the sugar content is said to be among the highest in India. The Company's products enjoy a deserved reputation in the market.

Bombay Burmah Trading Corporation, Limited.

(Incorporated in Bombay in September 1863 and Re-formed November 1895.)

Directors :—(1) J. M. B. Gibbons, Esq. (*Chairman*) ; (2) J. F. Macdonell, Esq. ; (3) Sir Cowasji Jehangir, Bart., K.C.I.E., O.B.E., M.L.A. ; (4) A. K. G. Hogg, Esq. ; (5) Mathuradas Vissanji, Esq.

Secretaries, Treasurers and Managers—Messrs. Wallace & Co. **Registered Office**—9, Wallace Street, Fort, Bombay.

Financial Year—ends May 31. **Accounts**—published in December.

Dividends—paid half yearly about June-December.

Capital—Authorised—Rs. 1,57,50,000 *i.e.* (1) Rs. 2,50,000 in 100 Ordinary shares of Rs. 2,500 each ; (2) Rs. 50,00,000 in 40,000 old Ordinary shares of Rs. 125 each ; (3) Rs. 1,05,00,000 in 84,000 new Ordinary shares of Rs. 125 each. **Issued and Subscribed**—Rs. 94,50,000 *i.e.* (1) Rs. 2,50,000 in 100 Ordinary shares of Rs. 2,500 each fully paid ; (2) Rs. 50,00,000 in 40,000 old Ordinary shares of Rs. 125 each fully paid ; (3) Rs. 42,00,000 in 84,000 new Ordinary shares of Rs. 125 each, on which Rs. 50 has been called up.

The shares of Rs. 2,500 each are entitled to an additional dividend equal to one-third of the surplus profits remaining in any year after paying a dividend of 12 per cent. on all shares and after transfer of amounts to Reserves as decided upon by the Directors. Up till the year 1918, the capital stood at Rs. 52½ lakhs but was raised to its present figure by the creation of the third issue of new shares. This was done to develop the company's tea interests.

The Company was incorporated to acquire and work the business in Burma, which had been started by the late Mr. William Wallace and it now owns leases for working timber from forests in Burma and Siam. During the last Great War an interest was taken in the tea industry which was then prospering exceedingly well and large areas were acquired in Southern India in the Nilgiris, Wynaad and the Annamalai Hills. Recently, additions have been made to existing interests in the Nilgiris and also a factory has been built in the Southern Shan States in Burma to manufacture tea which is grown there indigenously. The Company also holds the controlling interest in the East India Rubber Corporation, Ltd.

Financial Year—ends January 31. **Accounts**—published in July.

Dividends—payable in August.

Capital.—Authorised, Issued and Subscribed—£1,500,000 in 3,750,000 Ordinary shares of 8 shillings each fully paid. **Debentures—Authorised and Issued**—£500,000, Less Redeemed and Cancelled—£40,000. Now outstanding—£460,000. These were issued in January 1936 and bear interest at the rate of $5\frac{1}{2}$ per cent. They are repayable at 102 per cent. on April 30, 1962 or at 103 per cent. after December 31, 1941, on 3 months' notice from the Company. Provision has been made for a Sinking Fund to operate by purchase at 100 or below; or by drawings at 102 per cent. Interest is payable on June 30 and December 31.

There have been several changes in capital over the last 18 years.

In 1922, the Authorised Capital of the Company was raised from £1,000,000 to £1,240,000 by the creation of 600,000 shares of 8 shillings each. In 1928 the Issued Capital was raised from £996,284 to £1,116,284 by the issue of 300,000 shares of 8 shillings each to the Rangoon Oil Co., Ltd. as consideration for the transfer of the assets of the latter company. In 1929, the Capital was further raised by the issue of 2,50,000 shares at par to enable the Company to subscribe for 13,333, 10% Preference and 6,666 Ordinary shares both of Rs. 100 each in the British Burma Deep Drilling Co., Ltd. In 1936 the Capital was raised to its present figure by the creation of 650,000 additional shares of 8 shillings each, out of which 625,000 fully paid-up shares (also £100,000 Debentures) were given as the purchase price of the property acquired from the Yenangyaung Oilfields Southern Extension Co. Subsequent to the last Balance Sheet, in July 1939 the Authorised and Issued Capital of the Company was reduced from £1,500,000 to £750,000 by reducing the nominal value of each share from 8s. to 4s. The Authorised Capital was thereafter increased to its present figure by the creation of 3,750,000 new shares of 4s. each. These changes, therefore, do not appear in the accounts for the year ending January 31, 1939.

Share Registers are maintained in London, Bombay and Rangoon. Shares can be transferred from one Register to another.

The Company owns or controls over 400 well sites in the Yenangyaung Oilfield in Burma, in addition to other fields in Singu, Yenangyat and Ninbu. It also controls the Ormul Products Ltd. and owns a refinery. It had a holding of 92 per cent. of the shares of the Rangoon Oil Co., Ltd. which was wound up in 1938 but a new Rangoon Oil Company Ltd., registered in London, has been formed to take over the old com-

pany's assets. Apart from this, the Company has purchased leases and obtained options over oil areas in Trinidad, in the West Indies. And, lastly it has a substantial holding in the South African Torbanite Mining and Refinery Company Ltd. As we go to press, the announcement has been made of a dividend of 3d. per share (*Taxable*), the first declaration since 1931.

Burma Corporation Limited.

(Regd. at Rangoon, December 17, 1919).

Directors—(1) Rt. Hon. Viscount Horne of Slamannan, P.C., G.B.E., (*Chairman*); (2) P. E. Marmion, Esq., (*Vice-Chairman and Joint Managing Director*); (3) M. L. Burnet, Esq.; (4) C. F. Clifton, Esq.; (5) John R. Govett, Esq.; (6) F. B. Hartnoll, Esq.; (7) Capt. O. Lyttelton, D.S.O., M.C.; (8) A. T. W. Paine, Esq.; (9) Wm. S. Robinson, Esq., (*Joint Managing Director*); (10) Sir Henry Strakosch, G.B.E.; (11) Sir T. R. Wynne, K.C.S.I., K.C.I.E.

Secretary—Henry Ponsford, Esq. **Registered Office**—44, Phayre Street, Rangoon.

Financial Year—ends June 30. **Accounts**—published in December.

Dividends—payable in March and September.

Capital.—Authorised—Rs. 18,00,00,000 in 2,00,00,000 Ordinary shares of Rs. 9 each. **Issued and Subscribed**—Rs. 12,18,75,201 in 1,35,41,689 Ordinary shares of Rs. 9 each fully paid.

In 1935 the Authorised and Issued Capital of the Company was reduced to its present figure by reducing the nominal value of each share from Rs. 10 to Rs. 9. Re. 1 per share was paid (in January 1936) to the holders of the issued shares.

Share Registers are maintained in London and Rangoon and shares can be transferred from one Register to another.

The Company was formed to take over the assets of the Burma Corporation (old company) and the Burma Mines, which went into liquidation in 1919. A new mining lease was issued direct to this concern by the Government of India, for a period of 30 years from January 1, 1920 and a royalty of 2½ per cent. of 30 per cent. of the gross value of the metal content of the ore mined annually, is payable to the Government. The Company's mining areas are situated at Bawdwin in the Northern Shan States of Burma, the nearest railway station being 46 miles away at Namyao on the Burma Railways, and about 590 miles from Rangoon. The areas cover approximately ten square miles. The Company produces Refined Lead, Silver, Zinc Concentrates, Copper Matte and Nickel Speiss.

Dalmia Cement, Ltd.

(Regd. April 1937.)

(See also Advertisement).

Directors—(1) Seth Ramkrishna Dalmia, (*Chairman*); (2) Dwarkadas Jhunjhunwala, Esq.; (3) Seth Jaidayal Dalmia; (4) Kundanlal Agarwal, Esq.; (5) Jhabarmal Chokhani, Esq.; (6) Seth Shanti Prasad Jain.

Managing Agents—Messrs. Dalmia Jain & Co., Ltd.

Registered Office—Dalmianagar, (*District Shahabad*.)

Financial Year—ends December 31. **Accounts**—published in June.

Dividends—payable in June.

Capital—Authorised—Rs. 5,00,00,000 in (1) 25,00,000 Ordinary shares of Rs. 10 each, Rs. 2,50,00,000, (2) 2,40,000 6% (Tax-free) Cumulative Preference shares of Rs. 100 each, Rs. 2,40,00,000 and (3) 10,00,000 Deferred shares of Re. 1 each, Rs. 10,00,000.

Issued and Subscribed—Rs. 99,94,946-4-0 in (1) 6,00,000 Ordinary shares of Rs. 10 each fully paid, Rs. 60,00,000, (2) 35,000 6% Cumulative Preference shares of Rs. 100 each fully paid, Rs. 35,00,000 and (3) 5,00,000 Deferred shares of Re. 1 each, Rs. 5,00,000; less Rs. 5,053-12-0 being calls in arrears. **Debentures—Authorised**—Rs. 40,00,000 in 5½% Mortgage Debentures. **Subscribed**—Rs. 33,00,000 in 5½% Mortgage Debentures less Rs. 2,400 being the allotment money in arrears.

These Debentures were issued in 1939 and are repayable in 1947. The Company has the option of repayment at 102 per cent. at any time on three months' notice. Interest payable on 31st March and 30th September.

After the Accounts for 1939 were made up, it was decided to pay an interim dividend of six annas per share on the Ordinary shares but the shareholders of the Company at a second General meeting held on 12th June 1940, decided that in order to conserve the resources of the Company in the present extremely abnormal circumstances caused by the war, the payment of final dividend of Rs. 6 per Preference share and the interim dividend of annas 6 per Ordinary share be postponed until the situation improves, when the Managing Agents will again convene a meeting of the shareholders to consider the question of a dividend.

This Company, as the name denotes, manufactures cement and there are three factories, one at Karachi, another at Dandot in the Punjab and the third at Dalmiapuram, near Trichinopoly in Southern India. These three factories are capable of an annual output of about 4,50,000 tons.

Agents—Messrs. Bachhraj & Co., Ltd.

Registered Office—51, Mahatma Gandhi Road, Fort, Bombay.

Financial year—ends June 30. **Accounts**—published in November.

Dividends—payable in November.

Capital.—**Authorised**—Rs. 20,00,000 in 20,000 Ordinary shares of Rs. 100 each. **Issued, Subscribed and Paid up**—Rs. 5,00,000 in 5,000 Ordinary shares of Rs. 100 each.

Debentures—Rs. 5,00,000 First Mortgage Debentures were repurchased by the Company in 1937 and kept alive. Rs. 2,50,000 Second Mortgage Debentures were redeemed in November 1939.

In February 1940 the Issued, Subscribed and Paid-up Capital of the Company was increased from Rs. 5,00,000 to Rs. 15,00,000 by the capitalisation of Rs. 10,00,000 out of Rs. 11,00,000 standing to the credit of Reserve Fund, creating thereby 5,000 Ordinary shares of Rs. 100 each fully paid, Rs. 5,00,000 and 5,000 5 per cent (Tax free) Cumulative Preference shares of Rs. 100 each fully paid Rs. 5,00,000. These shares were distributed as free bonus to the existing shareholders in the proportion of one Ordinary share and one Preference share for each share held. This addition of Capital will appear in the next Report and Balance Sheet.

This Company owns a sugar factory at Golagokarannath in the U.P. on the R. & K. Rly. The crushing capacity in the beginning was 500 tons but now amounts to 1,800 tons of cane per day. The Company owns a farm but most of the cane required is purchased at the gate and out-stations from cultivators in the same manner as other mills in U. P. and Bihar. Sufficient cane is available in the area. The Company has gained a very good reputation amongst cultivators and also in sugar markets. It made good profits for 5 years but due to drought and the presence of cane disease, profits were less in the latter years. The Company is capable of making good profits in normal years, and paid 10 to 15 per cent dividend on the paid-up Capital of Rs. 5,00,000 during the last seven years.

Indian Copper Corporation, Limited.

(Regd. In United Kingdom, July 21, 1924.)

Directors :—(1) Sir Godfrey Butler Hunter Fell, K.C.I.E., C.S.I. (*Chairman and Managing Director*) ; (2) Robert Annan, Esq., M. Inst.M.M. ; (3) Herbert Cecil Porter, Esq. ; (4) Captain Hugh Vivian, M. Inst.M.M. ; (5) Douglas S. Warren, Esq.

Secretary—H. J. Guntrip, Esq., A.C.I.S. **Registered Office**—49, Moorgate, London, E.C. 2. **Local Agents and Registrars**—Messrs. Gillanders Arbuthnot & Co., 8, Clive Street, Calcutta. **Indian Office**—Ghatsila, P.O. Singhbhum District, Chota Nagpur.

Financial Year—ends December 31. **Accounts**—published in June.

Dividends—payable in June and December.

Capital.—**Authorised**—£900,000 in 9,000,000 Ordinary shares of sh.2 each. **Issued and Subscribed**—£894,000 in 8,940,000 Ordinary shares of sh.2 each fully paid.

Debentures.—**Authorised**—£500,000 in 7½% First Mortgage Convertible Debentures. Now outstanding—£7,500, secured by trust deeds dated February 23, 1927, and December 13, 1932 to the Beaver Trust Ltd., 1, Queen Victoria Street, London, E.C. 4 as a floating charge on the undertaking and assets, except the stone quarrying lease. These Debentures are repayable at 105 per cent. either on December 31, 1951 or on six months' notice at any time after January 1, 1940, or in the event of voluntary liquidation, or if the security is enforced. The Debentures were convertible into Ordinary shares at any time up to December 31, 1939, on the basis of 800 shares for every £100 held. Interest payable January 1, and July 1. Notice has been given that these debentures were to be redeemed on the 5th July 1940 at £105.

In 1925 the Capital of the Company was increased from £225,000 to £475,000 and in 1926, 2,951,854 unissued shares were constituted Preference Shares. In 1927, the Preference shares were converted into Ordinary shares and the Capital was thereby increased to £750,000. In October 1932, the Authorised Capital of the Company was increased to its present figure by the creation of 1,500,000 shares of sh.2 each. The Issued and Subscribed Capital was increased in 1934 from £305,845 to £500,240 by the issue of 1,941,546 shares of sh.2 each and by the conversion of £300 Debentures in 2,400 shares of sh.2 each ; in 1936 to £758,240 by the issue of 481,600 shares of sh.2 each and the conversion of £262,300 Debentures in 2,098,400 shares of sh.2 each ; in 1937 to £844,480 by the conversion of £107,800 Debentures into 862,400 shares of sh.2 each ; in 1938 to £854,480 by the conversion of £12,500 Debentures in 100,000 shares of sh.2 each ; and in 1939 to £894,000 by the conversion of £49,400 Debentures into 395,200 shares of sh.2 each.

The Corporation owns copper mining leases over an area of about 10.85 square miles in the Singhbhum Copper Field in the Chota Nagpur District of Bihar. Apart from this, it holds a stone quarrying lease for 30 years relating to an area of 6½ square miles in the Kharsawan State. The main properties are not far from the Tata Iron and Steel Works at Jamshedpur, the actual locations being Mosaboni and Sideshur, adjacent to the main line of the Bengal-Nagpur Railway and about 133 miles from Calcutta. Being near also to a large number of collieries, coal and coke for smelting purposes can be obtained on advantageous terms.

Registers of shareholders are maintained in London and Calcutta. Shares can be transferred from one Register to another.

Managing Agents—Messrs. Burn & Company. **Registered Office**—12, Mission Row, Calcutta.

Financial Year—ends March 31. **Accounts**—published in September.

Dividends—payable in April and October.

Capital.—**Authorised**—Rs. 5,00,00,000 made up of 5,000,000 Ordinary shares of Rs. 10 each. **Issued and Subscribed**—Rs. 2,53,57,120 made up of 2,535,712 Ordinary shares of Rs. 10 each, fully paid.

Debentures—(1) £1,500,000, in 4% First Mortgage Debentures issued at £98 per cent. in 1936, redeemable by the operation of a cumulative sinking fund of $1\frac{1}{2}\%$ per annum commencing in 1941, which will be applied in purchases on the market at any price less than par or by annual drawings at par. The Company can repay at 102% by giving six months' notice or at any interest date between December 31, 1951 and December 31, 1966 or in the case of voluntary liquidation. Interest payable on January 1 and July 1. These are registered debentures. (2) £500,000 in 4% Convertible Second Mortgage Debenture Stock. Issued in 1936 at par and repayable at par on December 31, 1961 or in whole or in part at 102% by six months' notice on any interest date after December 31, 1943. Till 1943, these Debentures are convertible into Ordinary shares of Rs. 10 each for every £1 10s. of Convertible Stock. Up till March 1939, £456,990 of these Debentures had been converted into Ordinary shares.

The original Capital of the Company was Rs. 3,00,00,000 and in 1925, this was reduced to Rs. 1,50,00,000 by writing down the nominal value of each share from Rs. 100 to Rs. 50. In October of the same year 1925, each of the Rs. 50 shares, was sub-divided into 5 shares of Rs. 10 each. In December 1936, by the terms of the amalgamation with the Bengal Iron Company Ltd., the Capital was reconstructed by writing down each of the 14,40,160 Issued shares of Rs. 10 to Rs. $7\frac{1}{2}$ and consolidating the written down shares into 360,040 Ordinary shares of Rs. 30 each and then sub-dividing them into 10,80,120 shares of Rs. 10 each. The Authorised Capital was then increased to Rs. 5,00,00,000 by the creation of 39,19,880 Ordinary shares of Rs. 10 each. In 1937, the Issued and Subscribed Capital was increased by the issue of 4,19,468 Ordinary shares of Rs. 10 each at Rs. 25, to the existing shareholders in the proportion of one such share for every five held as on April 21, 1937.

The Company was formed to manufacture iron and steel but only pig-iron is produced at present. As mentioned above, in 1936, a merger took place between it and the Bengal Iron Company and the two works are situated at Hirapur near Asansol and at Kulti. These consist of 4 modern blast furnaces with a capacity of 60,000 to 70,000 tons of pig-iron per mensem. Additionally, the Company manufactures bye products such as sulphuric acid, sulphate of ammonia and tar. The properties of the Company are extensive and comprise firstly, an area of approximately 10 square miles in the Singhbhum District of Behar, which it has been estimated to contain

not less than 90 million tons of high quality ore averaging 62 per cent. metallic iron and which are held on direct leases from the Secretary of State, expiring in 1945-50 but renewable for a further period of 30 years. Secondly, the old Bengal Iron properties are situated at Manharpur in the Singhbhum District, covering an area of 7 square miles and containing not less than 100,000 tons of high grade ore with 60 per cent. of metallic iron. The Company also has mining rights over areas of 27 square miles in the same district, for phosphate of lime and owns the Ramnagore, Kendwa, Noonadih and Jitpur Collieries, estimated to contain some 73 million tons of coal. It also holds all the shares of Clutha House Co. Ltd. and Eastern Light Castings Co. Ltd., and 1,100,000 Ordinary shares of the Steel Corporation of Bengal Ltd. with whom there is a working agreement which is outlined more fully in the details of that Company. Briefly, however, the Indian Iron and Steel Company will supply to the Steel Corporation of Bengal, all the requirements of the Corporation of hot iron suitable for steel making purposes at a price equal to the manufacturing costs plus 5 per cent. In return, the Company will receive one-fifth of the nett profits of the Corporation, these profits to be assessed after taking into account Debenture interest, Sinking Fund and Depreciation but before allowing for taxation or reserves. Share Registers are maintained in London and Calcutta and shares can be transferred from one Register to another.

Shah, Esq., (*Accountant General, Bombay*); (11) The Hon'ble Sir Rahimtoola Chinoy (*Ex-Officio*).

Secretaries and Treasurers—Messrs. F. M. Chinoy & Co., Ltd.

Registered Office—Radio House, Apollo Bunder, Bombay.

Financial year—ends December 31. **Accounts**—published in August.

Dividends—payable in September.

Capital.—Authorised—Rs. 3,00,00,000. (1) Rs. 2,00,00,000 in 2,00,000 Ordinary shares of Rs. 100 each and (2) Rs. 1,00,00,000 in 1,00,000 Deferred shares of Rs. 100 each. **Subscribed and Paid-up**—Rs. 44,99,900. (1) Rs. 27,00,000 in 27,000 Ordinary shares of Rs. 100 each fully paid up. Less : Rs. 100 on one share forfeited and (2) Rs. 18,00,000 in 18,000 Deferred shares of Rs. 100 each fully paid.

The conditions surrounding the Ordinary and Deferred shares are as follows :—The Ordinary shares are entitled to receive from the profits in each year, a preferential dividend of 7 per cent per annum and rank as regards such dividend and repayment of capital, in priority to all other shares. The Deferred shares come next to the Ordinary shares both as regards dividend and repayment of Capital. The distribution of profits, and in the case of winding up, any surplus assets, after repayment of capital, will be determined by dividing the amount into two equal parts—one half to the Ordinary shareholders and the other half to the Deferred shareholders in proportion to their respective holdings.

Until April 1932, the Company was known as the Indian Radio Telegraph Co. Ltd., whilst in February 1932, it entered into a Merger Agreement with the Imperial and International Communications Ltd., under which the Company changed its name in May 1932, to the Indian Radio and Cable Communications Co. Ltd., and from July 1, 1932, took over complete charge of the cable services, which means that it works the Beam and cable services jointly. In 1933, the Japan Beam Telegraph Service and the Telephone Service between England and India were opened to the public.

National Studios, Limited.

(Regd. August 2, 1939.)

Directors—(1) The Hon'ble Sir Rahimtoola M. Chinoy, (*Chairman*) ; (2) Sir Ishwardas Lukhmidas ; (3) M. C. Ghia, Esq., M.L.A. ; (4) Pranal Devkaran Nanjee, Esq., J.P. ; (5) M. A. Fazalbhoy, Esq., J.P. ; (6) A. D. Shroff, Esq. ; (7) Chunilal B. Desai, Esq. ; (8) Chimanlal B. Desai, Esq., (*Ex-Officio Managing Director*) ; (9) Y. A. Fazalbhoy, Esq., (*Ex-Officio Managing Director*).

Registered Office—160, Tardeo Road, Bombay 7.

Financial year—ends March 31. **Accounts**—published in April.

Capital.—Authorised—Rs. 25,00,000 made up of (1) Rs. 15,00,000 in 15,000 Ordinary shares of Rs. 100 each and (2) Rs. 10,00,000 in 10,000, 6% (Tax-Free) Cumulative Preference shares of Rs. 100 each. **Issued and Subscribed**—Rs. 10,00,000 made up of (1) Rs. 5,00,000 in 5,000 Ordinary shares of Rs. 100 each and (2) Rs. 5,00,000 in 5,000, 6% (Tax-Free) Cumulative Preference shares of Rs. 100 each. **Called-up**—Rs. 8,75,000 made up of (1) Rs. 5,00,000 in 5,000 Ordinary shares of Rs. 100 each fully paid and (2) Rs. 3,75,000 in 5,000, 6% (Tax-Free) Cumulative Preference shares of Rs. 100 each on which Rs. 75 has been paid.

At the time the last Balance Sheet was published the Called-up Capital was Rs. 7,50,000 but subsequently another call of Rs. 25 was made on the Preference shares bringing the figure to Rs. 8,75,000. The Preference shares have the right to participate in profits to the extent of a further 3% (Tax-Free) dividend after payment of 6% Tax-Free dividend on the Ordinary Capital. It must be mentioned that the whole of the Preference Capital was underwritten by the Investment Corporation of India, Ltd., a Tata concern.

The Company was formed with the object of producing quality pictures on the lines of some of the leading studios in western countries. In order that it would be in a position to start work, it purchased from the Film City Studio and Sagar Movietone Studios and General Films, Ltd., the whole of their equipments and machinery required for the production of films. Since the flotation of the Company, the Directors have spared no pains to obtain a suitable site for the erection of Studios, combining both the Nepean Sea Road Studio and Tardeo Studios at one central location, thus bringing about greater efficiency. The Company has also decided to purchase the land at Mouje Pahadi (Goregaon) which is considered an ideal site for outdoor programmes. Arrangements have been made with Messrs. Supreme Film Distributors for the distribution of its pictures for the territories of Bombay Presidency, C.P. and Central India and with Messrs. Select Pictures Circuit for distribution in Southern India and Ceylon. Arrangements are also being made for distribution in the British West Indies.

The Company was incorporated on August 2, 1939, and commenced working in November 1939. The Report for the year ending March 31, 1940 is really only a review of five months' working. In that time, the Company's first picture "Woman" was completed and subsequently released and has been a great success.

Premier Construction Company, Limited.

(Regd. July 6, 1920 as Tata Construction Company ; Name changed in January 1935.)

Directors—(1) Walchand Hirachand, Esq. (*Chairman*) ; (2) Gulabchand Hirachand, Esq. ; (3) Ratanchand Hirachand, Esq. ; (4) Maneklal Premchand, Esq. ; (5) S. C. Banerjee, Esq. ; (6) Tulsidas Kilachand, Esq.

Managing Agents—Messrs. Walchand & Co., Ltd. **Registered Office**—Construction House, Ballard Estate, Fort, Bombay.

Financial Year—ends December 31. **Accounts**—published in February-March.

Dividends—payable in March and November.

Capital.—Authorised, Issued and Subscribed—Rs. 48,81,250, made up of (1) Rs. 22,50,000 in 75,000, Ordinary shares of Rs. 30 each ; (2) Rs. 1,31,250 in 35,000, Promoters shares of Rs. 3-12 each ; (3) Rs. 10,00,000 in 10,000, 6½% (Taxable) Cumulative Preference shares of Rs. 100 each ; (4) Rs. 15,00,000 in 15,000, 6½% (Taxable) Cumulative 2nd Preference shares of Rs. 100 each.

The Preference shares carry preferential claim to repayment of capital and dividend (up to the commencement of the winding up, whether earned, declared or not) in priority to the other shares (including any Preference shares which may hereafter be created by the Company) but shall not be entitled to any further rights to participate in profits or surplus assets. The Second Preference shares are entitled to a fixed cumulative preferential dividend at the rate of 6½ per cent. per annum and shall rank in a winding up or otherwise both as regards capital and dividend (up to the commencement of the winding up whether earned, declared or not) next after the 10,000 Preference shares of Rs. 100 each and in priority to the Ordinary shares and Promoters' shares but shall not be entitled to any further rights to participate in profits or surplus assets, provided however that no further Second Preference shares ranking *Pari Passu* with the said 15,000 Second Preference shares shall be issued without the sanction of a resolution passed at a meeting of the Second Preference shareholders.

In 1925, the Capital of the Company was reduced from Rs. 2,00,00,000 to Rs. 23,81,250 by extinguishing the liability in respect of the uncalled capital on the Ordinary and Promoters' shares and by reducing the nominal value of each of the Rs. 100, Ordinary shares (paid-up Rs. 80) to Rs. 30 and of each of the Rs. 10 Promoters' shares to Rs. 3-12. In February 1935, the Authorised Capital of the Company was increased to Rs. 33,81,250 and the Issued and Subscribed Capital to Rs. 30,91,780 by the creation and issue of 10,000 Cumulative Preference shares of Rs. 100 each. In August 1936, the Authorised Capital was again increased to Rs. 48,81,250 and Issued Capital to Rs. 45,91,780 by the creation and issue of 15,000 Second Cumulative Preference shares of Rs. 100 each. In January 1937, the Directors purchased 9,649 forfeited Ordinary shares at Rs. 97 per share. These shares having been re-allotted, the Issued and Subscribed Capital of the Company was further increased to its present figure.

The Company undertakes large scale construction work of every kind through its Associated Companies, namely, The Indian Hume Pipe Company, Ltd. ; The Hindustan Construction Company, Ltd. ; The All India Construction Company, Ltd. ; The Building Construction Company, Ltd. ; Marsland Price & Company Ltd., including the construction of tunnels and bridges and is also interested in the manufacture of concrete and steel pipes through its subsidiary, the Indian Hume Pipe Company, Ltd., and its 30 factories.

(See Balance Sheets under individual headings).

Scindia Steam Navigation Company, Limited.

(Regd. March 27, 1919.)

(See also Advertisement.)

Directors—(1) Walchand Hirachand, Esq. (*Chairman*); (2) Shantikumar N. Morarjee, Esq. (*Ex-Officio*); (3) Tulsidas Kilachand, Esq.; (4) Maneklal Premchand, Esq.; (5) Pingle Venkatarama Reddy, Esq.; (6) Chunilal Bhaichand Mehta, Esq.; (7) The Hon. Mr. Shantidas Askuran; (8) Dinshaw D. Romer, Esq.; (9) The Hon. Sir Rahimtoola M. Chinoy.

Agents—Messrs. Narottam Morarjee & Co.

Registered Office—Scindia House, Ballard Estate, Fort, Bombay.

Financial Year—ends June 30. **Accounts**—published in October.

Dividends—payable in December.

Capital—Authorised and Issued—Rs. 2,25,00,000 in 15,00,000 Ordinary shares of Rs. 15 each. **Subscribed**—Rs. 2,24,83,575 in 14,98,905 Ordinary shares of Rs. 15 each. **Called-up**—Rs. 2,22,59,670 made up of 14,83,978 Ordinary shares of Rs. 15 each.

The above capital does not appear in the last balance sheet, as in 1940 there was an increase by the issue of 500,000 more shares, for the reasons mentioned hereafter, to the existing shareholders in the proportion of one share for every two held. The whole of this issue was underwritten by Messrs. Premchand Roychand and Sons and was oversubscribed.

The original capital of this Company was Rs. 4½ crores but in the year 1925 it was reduced to Rs. 89,83,575 firstly, by reducing the nominal value of each of the then existing 5,98,905 shares (divided into 5,82,239 shares of Rs. 75 each, on which Rs. 30 had been called up and 16,666 shares of Rs. 75 each, fully paid) to Rs. 15 per share; secondly by returning Rs. 23½ in cash in respect of the above 16,666 shares; thirdly by extinguishing the liability of Rs. 45 per share in respect of the uncalled capital on each of the above 5,82,239 shares and lastly, by cancelling capital, which had been lost, or was unrepresented by the available assets of Rs. 36½ on each of the above 16,666 fully paid up shares.

In the year 1936, the capital was increased to Rs. 1,50,00,000 by the issue of 4,00,000 shares of Rs. 15 each to the existing shareholders in the first instance, in the proportion of two of such shares for every three held.

The Company was the first tangible effort on a substantial scale, to form a national shipping concern. Difficulty after difficulty has been overcome and despite keen competition from existing shipping interests today it occupies a most prominent part in the industrial life of the country. The fleet consists of 18 large cargo steamers with a gross tonnage of 80,000, 5 passenger steamers with a total tonnage of 18,760 and steam launches and tugs. Cargo services are maintained between Burma and Bombay *via* Malabar Coast ports, between Calcutta and Karachi, Burma and Colombo and Burma and the East Coast Ports. There is a regular passenger service between Rangoon and Coconada *via* coastal ports. The Company also operates in the Haj pilgrim trade but did not do so this year on account of certain differences. The Company are also the Managing Agents of the Bengal Burma Steam Navigation Co., whose ships cater for the passenger trade on the Arakan coast between Rangoon and Chittagong, *via* coastal ports.

The recent new issue of capital has been made to extend the activities of the Company for the construction of a ship-building yard at Vizagapatam, thus making it self-sufficient. Already, there are several important subsidiary concerns, namely : (1) Narottam Ltd., (2) Scindia Steamships (London) Ltd., (3) Eastern Bunkerers Ltd., (4) Narottam and Pereira Ltd., (5) Eastern Bunkerers (Burma) Ltd., (6) Scindia Steamships (Burma) Ltd., (7) National Shipping Agency, which manages the Indian Co-operative Navigation and Trading Co. on the Konkan coast and (8) Ratnagar Steam Navigation Co. Ltd., which is also engaged in the Konkan shipping trade. A few months ago the Company acquired the Managing Agency of the Bombay Steam Navigation Co. Ltd., which now gives it complete control over the local coastal shipping trade. Unfortunately, however, this has been disorganised by the War and by Government taking over almost all the vessels for minesweeping and patrol duties for the Royal Indian Navy.

Managing Agents—Messrs. Burn & Co.

Registered Office—12, Mission Row, Calcutta.

Financial Year—ends December 31. **Accounts**—published last in May 1939.

Capital—Authorised—Rs. 10,00,00,000, made up of Rs. 8,00,00,000 in 80,00,000 Ordinary shares of Rs. 10 each and Rs. 2,00,00,000 in 2,00,000, 5% (Tax-Free) Cumulative Preference shares of Rs. 100 each. **Issued**—Rs. 3,70,00,000, made up of Rs. 2,50,00,000 in 25,00,000 Ordinary shares of Rs. 10 each and Rs. 1,20,00,000 in 1,20,000, 5% (Tax-Free) Cumulative Preference shares of Rs. 100 each. **Subscribed**—Rs. 3,69,79,300, made up of Rs. 2,49,88,900 in 24,98,890 Ordinary shares of Rs. 10 each fully paid and Rs. 1,19,90,400 in 1,19,904, 5% (Tax-Free) Cumulative Preference shares of Rs. 100 each fully paid. Less amount payable by the Indian Iron and Steel Co., Ltd., Rs. 55,00,000 and add Rs. 5,175 being the amount paid-up on forfeited shares.

Debentures—£1,000,000 (Rs. 1,33,33,333) 4½% Guaranteed Convertible Mortgage Debentures. Issued on the immovable properties of the Company and on the whole of the undertaking including uncalled capital and unconditionally guaranteed as to the principal and interest by the Indian Iron and Steel Co., Ltd. Repayable at 102% by six months' notice after January 1 1947. Up to January 1, 1947, these Debentures are convertible into Ordinary shares at the rate of 40 Ordinary shares of Rs. 10 each for every £50 Debenture. These are Registered Debentures.

The Company was formed with the object of erecting a modern steel works at Hirapur near the Indian Iron & Steel Company's works.

The following are extracts from the Prospectus which explain the arrangement with the Indian Iron & Steel Co., Ltd. :—

The Agreement between the Indian Company and the Corporation whereby the former will (grant to the Corporation the Leases and Underleases above-mentioned will also) provide for the following arrangements for the supply of water, gases, electric energy for light and power and other services. These arrangements are only terminable in the event of the liquidation of either the Indian Company or the Corporation :—

(1) **Water**—The Corporation will take all its requirements of water from the Indian Company and the Indian Company will guarantee an ample supply of water to the Corporation ; the water will be drawn from the reservoirs of the Indian Company and the Corporation will take delivery from the Indian Company, through meters at the Indian Company's Pump House. To enable the Indian Company to implement its guarantee, the Corporation will construct a proper drainage system to enable the circulation of water to be again returned to the Indian Company's reservoirs.

(2) **Electric Power**—The Corporation will take from the Indian Company and the Indian Company will guarantee to the Corporation the whole of its requirements of electricity for power and lighting purposes. The Indian Company will deliver power from its Power House through meters to the Corporation's sub-stations.

(3) **Town Service, Etc.**—The Indian Company will give the Corporation the benefit of its present town facilities, such as policing services, hospital facilities, town lighting, road upkeep, schools, town water, clubs, and any other facilities there may be.

(4) **Gases.**—The Corporation will take from the Indian Company and the Indian Company will supply from its surplus coke oven and blast furnace gases all gases required by the Corporation from its Gas Holders and will guarantee the quality and quantities required. The gases supplied will be metered at the point of delivery from the two Gas Holders which will be erected by the Indian Company.

The Indian Company will supply to the Corporation the facilities referred to in paragraphs (1), (2) and (3) above on favourable terms, which will be based on departmental costs plus a surcharge of ten per cent.

For gases taken by the Corporation from the Indian Company the Corporation will pay a price which will be equated to the average price of coal to the Indian Company at Hirapur based on its B.T.U. contents plus a surcharge of 10 per cent.

(5) **Hot Iron.**—The Corporation will take from the Indian Company and the Indian Company will supply the whole of the Corporation's requirements of hot iron suitable for steel-making purposes and to the specifications of the Corporation from the ladles of the Indian Company at a price equal to costs of manufacture plus 5 per cent.—such costs to be arrived at after crediting by-products including available gases in accordance with the formula mentioned.

In addition to the above payments the Indian Company is to be paid one-fifth of the net profits of the Corporation, such profits to be arrived at after taking into account Debenture interest, Sinking Fund and Depreciation but before allowing for taxation or reserves.

The Indian Company has agreed to provide the Corporation with the various facilities and services enumerated above on these advantageous terms in order to enable the Corporation to effect considerable savings on capital account, and to avoid the delays which would be consequent on the Corporation having to construct its own blast furnace plant, and in order to enable the Corporation to market its finished products on low production costs, and the Indian Company has stated, that, being confident of the future prospects of the Corporation, it is prepared to rely for a fair return for these advantages upon the prosperity of the Corporation.

Prospects and Earnings.—It is considered there is ample room in India for a new Steel Works. Excluding the special products of steel which are not now rolled or produced in India, the average consumption of Steel in India for several years past has been on the increase and has been largely in excess of the quantity of steel at present being produced in India. The industrial development of the country indicates that these requirements will further increase and that there will be ample demand for all the products of the Corporation. The initial production aimed at is 200,000 tons of finished steel products per annum. The costs of production of iron by the Indian Company are probably lower than those of any other iron-producing company in the world and the Corporation will get the benefit of these low costs.

With regard to prospective earnings, figures have been prepared based on estimated present-day costs of steel manufacture in India as compiled by the promoters, on the certified cost sheets of the Indian Company for the manufacture of hot iron on a two-furnace production basis and on the lowest weighted average import prices of British and Continental steel for the past fifteen years, but without taking into consideration the special measures of protection enjoyed by the Industry over and above the revenue duties which form part of the fiscal system of India. On the basis of these figures

after making allowance for Head Office expenses, Managing Agents' commission, depreciation and Directors' remuneration, but before making any provision for Indian taxation, the Directors estimate that the Corporation's profits should be at the rate of not less than Rs. 62 lakhs, or £465,000 per annum. On this basis, after making provision for the interest on the Guaranteed Convertible Debentures and Sinking Fund payments and the one-fifth of the net profits payable to the Indian Company as mentioned above, there would remain Rs. 42 $\frac{2}{3}$ lakhs, or £320,000. The net Preference dividend requires Rs. 6 lakhs, or £ 45,000, and after allowing for Indian Taxation on the Corporation's profits, would be covered $5\frac{1}{2}$ times. After allowing for the amount required for Preference dividend and estimated Indian taxation there would remain (subject to allocation to reserves) an amount approximating 11 per cent. on the nominal amount of the Ordinary Share capital now being issued. Share Registers are maintained in London and Calcutta and both classes of Shares are transferable from one Register to another.

Managing Agents—Messrs. Tata Sons, Ltd.

Registered Office—Bombay House, Bruce Street, Fort, Bombay.

Financial Year—ends March 31. **Accounts**—published in July.

Dividends—payable in August.

Capital—Authorised—Rs. 5,00,00,000, *i.e.*, Rs. 2,50,00,000 in 2,50,000 Ordinary shares of Rs. 10 each and Rs. 2,50,00,000 in 250,000, 5% (Tax-Free) Cumulative Preference shares of Rs. 100 each. **Issued**—Rs. 1,25,00,000, *i.e.*, Rs. 65,00,000 in 650,000 Ordinary shares of Rs. 10 each and Rs. 60,00,000 in 60,000, 5% (Tax-Free) Cumulative Preference shares of Rs. 100 each. **Subscribed**—Rs. 1,21,02,000, *i.e.*, Rs. 61,39,500 in 613,950 Ordinary shares of Rs. 10 each, and Rs. 59,62,500 in 59,625 Preference shares of Rs. 100 each. **Called-up**—Rs. 66,42,872 made up as follows :—Rs. 45,97,500 in 6,13,000 Ordinary shares on which Rs. 7½ has been paid up, Rs. 9,500 in 950 Ordinary shares of Rs. 10 each fully paid, Rs. 13,06,250 in 52,250 Preference shares on which Rs. 25 has been paid up and Rs. 7,37,500 in 7,375 Preference shares of Rs. 100 each fully paid—less calls unpaid Rs. 7,878.

The Company was formed for the manufacture of Soda Ash, Caustic Soda, and other allied chemicals. For this purpose the Company purchased the Okha Salt Works, Ltd., and the Pioneer Magnesia Works, Ltd., at Mithapur, Okhamandal, Baroda. The site possesses many natural advantages as the two principal raw materials, *viz.*, salt will be obtained from the existing Salt Works and Limestone will be obtained from large and rich deposits in the immediate neighbourhood.

The initial programme of the Company will include the manufacture of the basic heavy chemicals such as Soda Ash and Caustic Soda and fertilisers such as Ammonium salts and Potash. The Company, however, contemplates the development of the undertaking so as ultimately to embrace practically the whole field of production of heavy chemicals and fertilisers as well as special chemicals for use in industries such as pharmaceutical and photographic industries.

The Baroda State has agreed to grant some concessions to the Company. There will be no payment for limestone and other raw materials used in the process ; the salt will be free of all salt duties, and the State will charge on manufactured products a moderate royalty the payment of which will not begin until the company pays a dividend of 5% to the shareholders calculated over the whole of the paid-up share capital and until such time the only royalty payable will be a fixed sum of Rs. 500 per annum (which is the minimum royalty payable).

The Company has commenced salt manufacturing operations on the Okha Salt Works purchased. The Magnesia Factory was worked for a short period and then closed down according to plan to facilitate extensions and re-erection on a different site.

Agents—Messrs. Tata Sons, Ltd.

Registered Office—Bombay House, 24, Bruce Street, Fort, Bombay.

Financial Year—ends March 31. **Accounts**—published in August.

Dividends—payable in August. Generally declared once a year, but Directors may declare interim dividends.

Capital—Authorised and Issued—Rs. 10,52,12,500 made up of as follows :—
(1) Rs. 75,00,000 in 50,000 6 per cent. (Taxable) Cumulative Preference shares of Rs. 150 each, (2) Rs. 7,00,00,000 in 7,00,000 $7\frac{1}{2}$ per cent. (Taxable) Cumulative Preference shares of Rs. 100 each, (3) Rs. 2,62,50,000 in 3,50,000 Ordinary shares of Rs. 75 each and (4) Rs. 14,62,500 in 48,750 Deferred shares of Rs. 30 each.
Subscribed and Called-up—Rs. 10,47,15,224 made up of as follows :—(1) Rs. 75,00,000 in 50,000 6 per cent. (Taxable) Cumulative Preference shares of Rs. 150 each fully paid, (2) Rs. 6,93,81,900 in 6,93,819 $7\frac{1}{2}$ per cent. (Taxable) Cumulative Preference shares of Rs. 100 each fully paid, (3) Rs. 2,62,50,000 in 3,50,000 Ordinary shares of Rs. 75 each fully paid and (4) Rs. 14,62,500 in 48,750 Deferred shares of Rs. 30 each fully paid. (Add amount paid on 6,181 Second Preference shares forfeited =Rs. 97,569 and part payments received from shareholders against calls and instalments against decrees kept in suspense=Rs. 23,255).

Debenture Stock—4 per cent. First Mortgage Debenture Stock. Authorised Rs. 3 crores, Rs. 1 crore issued in July, 1937, and further Rs. 1 crore in July, 1938, as security against loan of Rs. 2 crores from Imperial Bank of India.

Voting—One vote per share for each Ordinary, First Preference and Deferred shares, and one vote for every 5 Second Preference shares.

It is necessary to give the conditions as regards dividends on all these classes of shares. After the first Preference have received 6 per cent. and the Second Preference $7\frac{1}{2}$ per cent. any balance remaining is divided as follows. First of all, the Ordinary shares receive 8 per cent. and the Deferred shares 25 per cent. then what is remaining is divided equally between the two. It is for this reason that the Deferred shares become such a speculative attraction because in boom years, they get a large amount by way of dividend since 48,750 shares get the same as 3,50,000 Ordinary shares.

The Company's works are situated at Jamshedpur in Bihar (*via* Tatanagar, B. N. Railway). The Company owns a gigantic Steel and Iron works equipped with modern plant and also possesses valuable mining rights over deposits of iron ore, coal, dolomite, etc. The Company's plant is being further extended and when these extensions are fully completed, which is expected in 1941, the annual production of the Company

is expected to be 12,00,000 tons of pig iron, and 9,00,000 tons of finished steel. The Company also manufactures hardware tools, such as picks, powrahs, beaters, hammers, etc., and red oxides. The Company also supplies rails to the Railway Board and most of the Indian Railways. This Company is considered to be the biggest entity in the steel industry in Asia.

The output of the principal products during the year ended March 31, 1940, in comparison to that of the preceding years was as follows :—

	March 31, 1936	March 31, 1937	March 31, 1938	March 31, 1939	March 31, 1940
Coke - - - -	730,000	778,000	896,000	865,000	972,000
Pig Iron - - - -	900,000	827,000	921,000	1,020,000	1,140,000
Steel Ingots - - - -	880,000	850,000	899,000	947,000	1,018,000
Salable Steel - - - -	661,000	680,000	674,000	715,000	777,000

Full details regarding the Company's activities can be seen by reference to the special article by Sir Ardeshir Dalal.

Tata Oil Mills Company, Limited.

(Regd. December 10, 1917.)

Directors—(1) J. R. D. Tata, Esq. (*Chairman*) ; (2) Dinshaw D. Romer, Esq. ; (3) Sir Chunilal V. Mehta, K.C.S.I. ; (4) Sir Homi Mody, K.B.E. (*Special Director*) ; (5) D. M. Khatau, Esq. ; (6) A. D. Shroff, Esq. ; (7) Sir Ardeshir Dalal, Kt.

Agents—Messrs. Tata Sons, Ltd.

Registered Office—Bombay House, 24, Bruce Street, Fort, Bombay.

Financial Year—ends March 31. **Accounts**—published in September.

Dividends—payable in October.

Capital—Authorised—Rs. 47,00,000 in 188,000 Ordinary shares of Rs. 25 each. **Issued**—Rs. 45,78,950 in 183,158 Ordinary shares of Rs. 25 each. **Subscribed**—Rs. 44,92,625 in 179,705 Ordinary shares of Rs. 25 each fully paid.

In July 1928 the capital of the Company was reduced from Rs. 1,00,00,000 to Rs. 25,00,000 by reducing the nominal value of each Ordinary share from Rs. 100 to Rs. 25, and was again increased to its present figure by the creation and issue of 88,000, 6% Non-Cumulative Preference shares of Rs. 25 each fully paid. In April 1938, these Non-Cumulative Preference shares were converted into Ordinary shares of Rs. 25 each fully paid.

The Company owns two factories, one at Ernakulam in Cochin State and the other at Sewree in Bombay. The former factory has an Oil Mill, and Plants for the manufacture of Washing and Toilet Soaps and Glycerine. There is also an Oil Refinery, including a Hydrogenation Plant ; Tin Can Plant and a Plant for the manufacture of Toilet Articles. The Sewree factory was erected in 1938 and comprises a Soap Plant, an Oil Mill and a Glycerine Plant. The activities of the Company are many. Its refined cooking oil, "Cocogem" is well-known all over India. Other products are Vegetable Oils, Oil Cakes, Compost Manure, Vegetable Products, Toilet, Washing and Industrial Soaps, Toilet Articles, Glycerine, Detergents, Polishes, Tins, Ice, Oxygen, etc.

The Cotton Exchange Building at Kalbadevi Road.

(By courtesy of the East India Cotton Association Ltd)

Short History of the Bombay Cotton Market.

This article has been compiled from information taken from the brochure issued by the East India Cotton Association, Ltd., in 1938.

INDIA has been the home of cotton and the cotton trade from the earliest times. From India cotton growing spread to China and to other parts of the East. India now ranks second among the cotton producing countries of the World. Like America, India uses a large portion of her cotton crop herself but also has an important export trade. Nearly half of the Indian cotton crop is marketed through Bombay. In a normal season about three million bales of cotton arrive in Bombay out of which nearly two millions are exported and the balance consumed by Bombay Mills.

In the early days of trading the Bombay cotton market or "Green" was situated in front of the Town Hall and from that site owing to the steadily increasing volume of trade and consequent congestion of traffic, it was moved to Colaba in 1844 A.D. There the trade was domiciled for over three-quarters of a century and during that period the steady growth of the trade continued until in 1885-86 the cotton brought into Bombay amounted to 1,534,974 bales and in 1919-20 to 3,427,024 bales. It became increasingly obvious that a change of locality was necessary in the interests of the cotton trade and the City in general. Thus the proposal to move the market to Sewri was based on two important considerations, *viz.* :

- (1) The increased traffic on the City Roads.
- (2) The proximity of Sewri to the Mills and the Docks.

In 1923 when the warehousing accommodation provided by the Bombay Port Trust at Sewri was available, the Trade in deference to the wishes of Government, left its old home and came to a temporary structure at Sewri with all the advantages of a newly developed centre.

The Trade was naturally reluctant to leave Colaba where it had prospered for over three-quarters of a century and decided to leave as a landmark of their activities at Colaba, a fine structure in the shape of a Temple for the idol of God Shiva which had been there for a very long period. This Temple was built in 1925 at a cost of nearly Rs. 40,000 which was collected from the Hindu members of the Cotton Trade. The land on which the Temple has now its permanent abode is rented from the Bombay Port Trust and the Colaba Land and Mill Co., Ltd., on nominal rents.

Until almost the end of the year 1917, the regulation of the Cotton Trade of Bombay was in the hands of several commercial Associations, all of which claimed to have some controlling voice in the regulation of the trade. A single agency for this purpose was first introduced under the Defence of India Act as a purely temporary measure. The Committee set up by the Government of India was known as the Cotton Contracts Committee and, under the Chairmanship of Mr. (now Sir) G. Wiles, I.C.S., made the best of the situation then existing. In November 1918, however, just before the Armistice was signed, a Bill was introduced in the then Bombay Legislative Council to provide for the control of dealings in cotton in the Presidency of Bombay.

The Bill was passed in December 1918, and the Cotton Contracts Committee was replaced by the Cotton Contracts Board, a body constituted under the Bombay Cotton Contracts Act I of 1919, with effect from 25th January 1919. From then onwards the Trade began to think of formulating the details of a permanent single

commercial Association to regulate the trade in raw cotton in Bombay and the East India Cotton Association, Ltd., was formed and registered under the Indian Companies Act, 1913, on the 19th October 1921. The Association took over the functions of the Cotton Contracts Board when it ceased to exist on the 1st June 1922.

Soon after the Association commenced functioning, it applied to the Government of Bombay for vesting in it the powers of control of the trade which were so far enjoyed by the Cotton Contracts Board and a Bill giving most of the powers exercised by that Board was introduced in the Bombay Legislative Council on 25th July 1922.

The Bill was passed in September 1922 and became law immediately on receiving the assent of the Governor-General. The duration of this Act was originally restricted to a period of three years with power to the Governor-in-Council to extend it from time to time. The Association continued to function under this Act until 31st October 1932, when it was replaced by the Bombay Cotton Contracts Act IV of 1932, under which it is at present working.

Under this Act, the Association is the only recognised Cotton Association in the City of Bombay and any contract in cotton, which is not made in accordance with its By-Laws, is void. The constitution of the Board of Directors of the Association which was also changed, is unique in the fact that it represents all sections of the Cotton Trade (namely, the Buyers, Sellers and Brokers) as well as the Cotton Growers.

The entire business in Ready or Spot cotton in Bombay is done under the rules and regulations of the Association but business in forward cotton is, however, being done under the auspices of one or two other bodies also, although such business is void at law.

Of the various innovations which have been introduced since Government came to assist in the control of this Trade, the one which has been acknowledged by all to have done the most good is the institution of a Clearing House for cash payment on a fixed date twice every month of differences outstanding on forward contracts. This has now been altered and from September 1st, 1940, there will be weekly settlements.

This system of clearing differences by periodical payments came into being in Liverpool in 1882, *i.e.*, one hundred and twenty years after the first import of cotton into that city in 1763 and 41 years after the first Association to regulate cotton trading was started in Liverpool. In Bombay, it was introduced in 1918 that is 43 years after the starting in 1875 of the first Association (The Bombay Cotton Trade Association) to regulate the cotton trade of Bombay.

The total amounts handled by the Clearing House since its institution are given below :—

Year.		Rupees.	Year.		Rupees.
1918-19	-	14,40,57,653	1929-30	-	4,46,63,180
1919-20	-	10,79,44,433	1930-31	-	3,60,80,817
1920-21	-	4,72,10,683	1931-32	-	4,89,12,122
1921-22	-	12,98,94,566	1932-33	-	4,48,33,077
1922-23	-	7,69,37,399	1933-34	-	4,25,28,389
1923-24	-	9,16,95,270	1934-35	-	5,44,96,538
1924-25	-	3,18,59,196	1935-36	-	4,63,50,359
1925-26	-	3,54,99,096	1936-37	-	4,59,89,206
1926-27	-	7,66,70,923	1937-38	-	7,93,80,063
1927-28	-	9,44,42,459	1938-39	-	4,31,79,602
1928-29	-	4,30,99,488			

It is interesting to note that during the year 1921-22 the amount cleared at one Settlement Clearing, *i.e.*, of the 28th October 1921, amounted to a crore and sixty-three lakhs of rupees and two years later during the regime of the Association, the amount cleared at one clearing, *i.e.*, the Settlement Clearing of the 30th November 1923, amounted to a crore and eighty-eight lakhs of rupees, the highest clearing then on record in Bombay. But, this was surpassed by the Settlement Clearing of 29th January 1940 when it came to Rs. 1,97,40,157.

A system of Blind Surveys has been introduced by the Association since October 1937 to replace the old system of surveys which was the subject of so much criticism lately. Under the present system, Surveyors are not appointed by the parties to the dispute but they function through panels of the Survey Committee appointed by the Board of Directors annually and they do not know whose cotton they are surveying. It is hoped that the new system will work to the satisfaction of the Trade.

THE COTTON EXCHANGE, KALBADEVI ROAD.

The erection of this building was undertaken to meet one of the recommendations made by the Wiles' Committee in 1930. By a long-standing practice of many years, trading in forward contracts was daily carried out in two separate sessions held at two different places. The afternoon sessions took place at Colaba under the regime of the Bombay Cotton Trade Association until it was replaced by the Cotton Contracts Committee and later by the Cotton Contracts Board, and since June 1922, under the regime of this Association after the trade was decontrolled by the Cotton Contracts Board. On the removal of the trade to Sewri on 1st November 1923, the afternoon sessions took place at the Cotton Green at Sewri. The midday sessions have always taken place in the Marwari Bazaar, and since the formation of the Bombay Cotton Brokers' Association, it had been under the control of that Association. The Wiles' Committee felt that this dual system of control was not conducive to the best interest of the Trade and consequently recommended that the Association should take over complete control of all forward trading in the Bazaar and provide a building of its own in the Bazaar for this purpose, as soon as possible. The Association lost no time in eventually acquiring the property accommodating the Trading Hall in the Marwari Bazaar along with two other adjoining properties within the angle formed by the junction of Sheikh Memon Street and Kalbadevi Road at an approximate cost of Rs. 8 lakhs. The old buildings standing on the site which measured 1,271 square yards were demolished to make room for the Cotton Exchange but the whole space was not available for the building owing to the application of the Municipality's setback rule for street widening at this point. The portion of ground thus lost measured 259 square yards thereby reducing the building area to 1,012 square yards. The question then arose of permitting the Exchange to be raised to a height above the 70 feet maximum height prescribed under the Municipal Act and there was good reason to expect a concession in return for the land costing about Rs. 1,58,000 surrendered to the Municipality for road-widening. The result of the negotiations was that the Municipality, in view of the exceptional circumstances, granted permission for the erection of three additional stories with setbacks from the front at the 5th floor level thereby bringing the height of the building to 102 ft. and with its twin towers to a height of 114 ft. The frontage of the Exchange on Kalbadevi Road is 159 ft. and on Sheikh Memon Street 67 ft.

The foundation stone of the Exchange was laid on the 12th day of February 1936 by late Seth Anaridilal Podar, J.P., in the presence of a large representative gathering. The President, Sir Purshotamdas Thakurdas, Kt., presided on the occasion. The Exchange was ready for occupation by members on 1st March 1938. It comprises of a basement, a ground floor with two galleries and six other upper floors. The permanent Trading Ring is on the Ground Floor and measures 50' x 30'. Telephone cabins (5'-9" deep and 3'-3" wide) have been constructed for members on both sides

of the Ring on the Ground Floor as well as on the two galleries. Altogether there are 114 such telephone cabins. The top floor accommodates the administrative offices of the Association and the Clearing House and the remaining five floors contain 113 rooms for members' offices. Accommodation will also be provided in the building for a Bank and a Post and Telegraph Office.

With the willing help and co-operation of the Trade, the Association was able to accommodate its Trading Ring on the premises of this very building while it was still under construction thereby obviating the necessity of having to shift from place to place until the new Ring was built. A part of the present Trading Hall was opened for purposes of trading in forward contracts on 29th March 1937.

THE COTTON GREEN BUILDING, SEWRI.

The Building at Sewri with the cotton warehouses and storage grounds around it is conveniently situated for business in Spot Cotton. This building was erected at a cost of nearly 19 lakhs of rupees and was declared open by His Excellency the Rt. Hon. Sir Leslie Orme Wilson, then Governor of Bombay, on the 1st December 1925. It contains 120 Buyers' Rooms, 80 Sellers' Rooms, a large Trading Hall and an extensive arbitration room for examining samples of cotton. The Building occupies a space of 12,072½ square yards and has a frontage to the north of 1,800 feet and to the east of 650 feet which provides satisfactory light for the examination of cotton of nearly 2,500 feet.

The Cotton Green Estate at Sewri is owned by the Bombay Port Trust and contains 178 godowns, 225 jethas (open spaces for storage of cotton) and 16 sheds. Besides these, there are about 90 godowns owned by private owners within a radius of about a mile from the Cotton Green Building ; but by common consent the godowns owned by the Port Trust are in many respects more convenient, well looked after and maintained in good order. The Port Trust godowns are estimated to hold on an average about 4,500 bales each and the rent which at the start was Rs. 8,100 per year, has steadily been reduced to Rs. 4,800 with one additional facility that a godown may be rented on a monthly basis at a slightly higher rate.

Although the Cotton Trade looks forward to further reduction in godown rent from the Port Trust, it is but due to the Port Trust to acknowledge the consideration shown by them in steadily reducing the rent of godowns despite their having passed through very lean years of budgetary position. There is one item in which, however, the Port Trust have not shown any consideration to the Cotton Trade. As rent for the plot on which the Association's building stands, the Port Trust charges as much as Rs. 33,200 per annum, without any reduction whatsoever since the very start. This results in the yield on the Cotton Green Building being very nominal, having been as low as $\frac{1}{2}\%$ per annum on the investment of 19 lacs of rupees.

May 1940

Bombay Bullion Exchange Building.

History of Bombay Bullion Exchange.

The Bombay Bullion Exchange came into being on the 24th January 1923, and from that date all bullion business has been conducted under its auspices. The Bullion Exchange has its own building but before its erection, business was done in the street with operators having to put up with much harassment from the police, who at times had recourse to force in order to clear the crowds. This hardship has been eliminated and the management of the trade is under the joint control of the Board of Directors and the Merchants' Committee. There are two kinds of Members. Permanent Members who hold one share of the Exchange and Associate Members who have to pay an annual subscription. Holding of three shares of the Exchange qualifies one for being a Director.

In those early days in the life of the Bullion market there was no regular constitution and prominent chokseys had a governing hand in fixing the dates for the delivery, auction and Valan (payment). Delivery orders for silver issued on Vad 5th of the Lunar month and deliveries took place till Vad 7th while Valan (payment) was done in cash on Vad 8th.

There was no forward business in gold till 1915. Small gold bars of 10 oz. were imported by the National Bank and the Hongkong Bank and these were largely sold in the markets. It was only in 1915 that a prominent Bullion merchant directly imported gold bars from America and the Government of India minted gold mohurs (Sovereign) and offered them freely for sale. The demand, however, was so large that deliveries had to be extended from two to three months ahead.

The Bullion merchants had no direct dealing with London brokers. Selling offers were received from London by the local Banks who executed them through the Bombay brokers. Direct connection with London brokers was established subsequent to 1901 when a prominent choksey started foreign business by opening a Branch office in London. In 1906, the late Mr. Chunilal Saraiya, the managing agent of the Specie Bank, imported silver on a large scale with a view to squeeze the market but he failed ultimately in his object with the result that the Bank had to close down.

In the case of any disputes arising between parties, they were referred to the Marwari Chamber of Commerce or to some prominent Chokseys whose decision was taken as final by both the parties.

In 1913-14, an Association of Silver Merchants was formed and Rules were framed for Settlement days, etc., according to which the market worked for some time.

In the absence of a Clearing House delivery orders were passed on personally from one party to another and at times the delivery orders were issued at such an eleventh hour that there would be practically no time left for passing the order on before the scheduled time and consequently the merchants outside the hall and the Shroffs had to pay undue interest. Valan payments were made in cash which involved great risk. All these risks and difficulties were removed by the establishment of a Clearing House in May 1936.

Extracts from the Rules of The Native Share and Stock Brokers' Association, Bombay.

BARGAINS IN THE MARKET.

Members only Parties to Bargains.

149. (a) The Association does not recognise as parties to any transaction or dealing in the Market any parties other than its own Members ; and every such transaction or dealing whether for the account of a Member or for the account of a constituent must be made and carried out according to the Rules and Regulations of the Association.

Inviolability of Bargains.

(c) An application to annul a bargain in the Stock Exchange shall not be entertained by the Board, except upon a specific allegation of fraud or wilful misrepresentation or upon *prima facie* evidence of such material mistake in the bargain as in their judgment renders the case one which is fitting for their adjudication.

Non-acceptance of Havala.

150. (c) A Member shall not be bound to accept the Havala on behalf of his constituent. Where a member accepts a Havala on behalf of his constituent it shall be, unless otherwise agreed upon by them in writing, at the risk and on account of the constituent who shall be deemed to indemnify the member accepting such Havala against any loss suffered by him by reason of his having accepted the Havala.

Dealings in certain Securities Forbidden.

151. (a) All transactions and dealings in stock, shares and like securities in which permission for dealings has not been granted by the Board are forbidden and a Member who shall execute any order with a Member or non-Member for the purchase or sale of any such securities shall be suspended or fined by a Resolution of the said Board.

Brokerage for Non-Members.

159. (a) Save as provided in rules 168 and 170(b), a Member shall not execute an order for a non-Member without charging such Non-Member at not less than the minimum scale of brokerage. While executing the order the Member shall not buy or sell securities, directly or indirectly, for his own account or for any account in which he has direct or indirect interest except when he is obliged to close the account of his constituent under the rules or when his constituent directly authorises him in writing to act as Principal and provided that the price is fair and justified by the condition of the Market.

Contract Notes and Brokerage.

167. (a) Members shall render contract notes to non-Members in respect of every bargain made for such non-Member's account, stating the price at which the bargain has been made. Such contract notes shall contain a charge for brokerage

at rates not less than the scale prescribed in Appendix G annexed to these Rules, or as modified by the provisions of rules 168 and 170(b). Such contract notes shall show brokerage separately and shall be in Form A prescribed in Appendix H annexed to these Rules ;

Contract by Members as Principals.

(c) In cases where a Member is buying for himself the securities of his constituent or selling his own securities to his constituent as provided in rule 159, the contract notes shall be in Form B prescribed in Appendix H annexed to these Rules ;

Signing of Contract Notes.

(d) A contract note shall be signed by a Member or by his partner or constitute attorney.

Contracts for Budlee.

(f) Budlee contract notes shall be in one of the forms prescribed in Appendix D as the case may be. Notwithstanding anything contained in Rule 159(a) or 167(c) a member may render contract notes in Form A instead of in Form B, should he so desire, when he employs his own resources in carrying forward the purchases of his constituent from one settlement to another.

(g) A contract note referred to in this rule or any other rule for the time being in force shall be deemed to mean and include a contract and shall have the same significance as a contract.

(h) No contract note shall be issued by an individual member of a firm recognised under rule 39 ; that is to say, in the case of a firm, every contract shall be signed only in the name of a firm.

Budla Transactions.

169. In cases of Budla transactions, the seller shall not be entitled to claim the identical securities and such transaction may be put through between two non-Members.

Obligations to Charge Brokerage.

170. (a) Save as may be provided in these rules brokerage shall be charged and collected upon the execution of all orders for the purchase or sale or carry over of the securities for account of others. This brokerage shall be at rates not less than the scales prescribed in Appendix G, and shall be net and free from any rebate, return, discount or allowance made in any shape or manner or by any method or arrangement direct or indirect.

Reduced Brokerage.

(b) On any transaction a Member may at his discretion charge a reduced brokerage provided that such reduced brokerage shall not be less than one-half of the scale prescribed in Appendix G and in case of Budli transactions not less than one-fourth of the said scale.

Evasion of Brokerage Rules.

(c) A member shall not act as a Principal for the purpose of evading this rule or adopt any other procedure for a like purpose. Any evasion will be treated as a breach of this rule and also rule 167.

Unusual Buldi Rates.

(d) Any agreement or arrangement between a member and his constituent whereby special and unusual rates for carrying over are given, with intent to give special or unusual advantage to such constituent, for the purpose of securing his business shall be deemed to be a breach of this rule.

Unwarrantable Business.

171. A Member shall not transact any business for a constituent which in its nature or extent appears beyond the means of such constituent.

Payment and Delivery.

Delivery of Transfers.

177. (a) In all ready delivery contracts the necessary transfer forms duly signed by the transferor and witnessed shall be delivered by the seller to the buyer before 5 p.m. on any business day or before 3 p.m. on Saturday, but not later than the seventh day from the day of sale. When transfer forms are not so delivered, securities may be bought-in by the buyer in the manner provided in these Rules. The buyer however must accept the transfer forms if tendered at any time prior to the actual exercise of his right to buy-in ;

Denominations of Transfers.

(b) Unless otherwise agreed at the time of sale, the buyer is entitled to require from the seller transfer forms in the following lots ; but he must accept delivery of one or more certificates representing the total number of shares in each bargain :—

Each transfer of 50 shares if the face value does not exceed Rs. 10.

Each transfer of 25 shares if the face value exceeds Rs. 10 and does not exceed Rs. 25.

Each transfer of 10 shares if the face value exceeds Rs. 25 and does not exceed Rs. 50.

Each transfer of 5 shares if the face value exceeds Rs. 50 and does not exceed Rs. 100.

Each transfer of 1 share if the face value exceeds Rs. 100.

Delivery of Shares.

178. (a) Delivery of shares sold must be made by the seller before 2 p.m. on Mondays and Thursdays only provided that such delivery shall not be made earlier than the 6th and later than the 8th day on which the transfer forms were delivered. If delivery of shares is not so made, the shares may be bought-in by the buyer in the manner provided in these rules.

(b) In all transactions of contributory shares the buyer shall return to the seller the transfer form duly executed by the transferee on the seventh day after the day on which the transfer form was delivered. If the transfer form is not so returned within the said period the shares may be sold-out by the seller in the manner provided by these rules.

Delivery of Shares in Part.

179. The buyer shall not be required to pay for shares presented after 2 p.m. on the day fixed for the delivery of shares by Rule 178 (a). He must accept and pay before 3 p.m. for all or such of the shares bought which may be delivered within the time prescribed and he may buy-in any shares not delivered in accordance with the provisions of these Rules.

Non-Payment for Shares.

180. If a buyer fails to take up and pay for shares delivered in the manner provided in these Rules, the seller may sell-out the same in the manner provided in these Rules.

Damages.

181. In every case, the Member in default shall be liable for any damages which may arise from such buying-in or selling-out and the Member who fails to pay such damages shall be declared a defaulter by the Board.

Buying-in and Selling-out.

182. Buying-in and Selling-out must be effected by the Secretary of the Association in the open Market during the official business hours save as otherwise provided in these rules. Only Members may make a bid or offer. The charges for buying-in and selling-out shall be half of those authorised by Appendix G.

When Securities may be Bought-in or Sold-out.

183. (a) Securities (including new issues) may be bought-in or sold-out on failure to comply with any Rule of the Association applicable to delivery or payment or on any failure to carry out any special conditions subject to which bargain for ready delivery was made ;

Until 15 Days.

(b) Buying-in or selling-out may be effected on the day following failure to make payment or give delivery of transfer or securities in accordance with the Rules or on any day thereafter not later than the fifteenth day after such failure ;

Forfeiture of Right.

(c) The parties to a transaction will forfeit all right of recourse against each other if the buying-in or selling-out is not effected within the period prescribed by this Rule, unless it shall appear that one of the parties has not exercised his right on the written request of the other.

Delay in Buying-in or Selling-out.

(d) If the buying-in or selling-out is not effected within the period prescribed in this Rule and if the Member buys-in or sells-out at the later date and satisfies the Arbitration Committee that it was impracticable to buy-in or sell-out earlier than he did, the Arbitration Committee may allow damages on the footing of the rates at which the securities were bought-in or sold-out or at such other rates at the Arbitration Committee may determine.

Buying-in and Selling-out when Forbidden.

184. The shares of a company shall not be bought-in or sold-out while its transfer books are closed for payment of dividend or bonus or the receipt of calls or for any

other reason. The provisions of this Rule shall not apply to the buying-in or selling-out effected by the Association in the course of clearance through the Clearing House.

Notice of Buying-in and Selling-out.

185. Notice in writing signed by the Secretary of the Association of the intention to buy-in or sell-out securities must be delivered at the office of the member in default and if such notice be not so delivered, the buyer or the seller as the case may be shall not be entitled to buy-in or sell-out or claim damages. The provisions of this Rule shall not apply to the buying-in or selling-out effected by the Association in the course of clearance through the Clearing House.

Tender by Seller before Notice.

186. (a) The buyer must accept and pay for the securities at any time prior to the actual exercise of his right to buy-in ;

Tender by Seller after Notice.

(b) If the buyer has issued notice of his intention to buy-in securities for default in delivery and if the seller before the securities have been bought-in makes a proper tender of such securities, the buyer must accept and pay for such securities.

Tender by Buyer before Notice.

187. (a) The seller must accept payment and deliver securities at any time prior to the actual exercise by him of his right to sell-out ;

Tender by Buyer after Notice.

(b) If a seller has issued notice of his intention to sell-out securities for default in payment and if the buyer tenders payment before the securities are sold-out, the seller must deliver the securities and accept payment.

Securities Bought-in but Undelivered.

188. (a) Securities bought-in and not delivered on the next business day may be again bought-in for immediate delivery without further notice and any loss shall be paid by the Member causing such further buying-in ;

Securities Sold-out and not Paid for.

(b) Securities sold-out and not paid for the next business day may be again sold-out for immediate payment without further notice and any loss shall be paid by the Member causing such further selling-out.

Bid by Buyer or Seller Barred.

189. A Member for whose account the buying-in or selling-out is effected shall not be permitted to make a bid or offer.

Notice of Damages.

190. A Member buying-in or selling-out securities must within two days of the buying-in or selling-out give notice of the same to the Member in default and claim damages, if any, arising therefrom. The Member on whose account the buying-in or selling-out is effected shall notwithstanding that he is in default be entitled to the difference or profit which may arise by the buying-in or selling-out on his account, as the case may be.

Settlement of Contracts.

Nature of Payment.

191. (a) When securities are delivered, the party delivering the securities shall have the right to require the purchase money to be paid in cash against delivery on due date in accordance with the Rules :

Provided that when delivery is made through the Clearing House payment shall be made in accordance with the Rules relating to the Clearing House ;

Cash Payment.

(b) If a Member requires cash in payment for securities sold, he must give notice in writing to his buyer to that effect before 3 p.m. on the day previous to the day of delivery and payment shall be made against delivery of the securities :

Provided that the buyer shall have the right or option of requiring the party delivering the securities to receive payment at the office of any bank situated in the Fort area ;

(c) If the buyer wishes to exercise his rights or option under this rule, he must hand over to the seller not later than 12 noon and a Receive-and-Pay Order properly signed by him or his client ;

Payment by Cheque.

(d) Cheques must be drawn by the Member who has bought securities. They must be crossed and marked "Payee's account only."

Delivery and Payment Postponed.

192. Securities of a company shall not be delivered and payment shall not be claimed while the transfer books of the company are closed, except in the case of shares on the Forward List which are to be settled through the Clearing House.

Settlement on Reopening of Transfer Books.

193. All contracts in shares falling due while the transfer books of such shares are closed, shall be completed on the opening of the books, except in the case of shares on the Forward List which are to be settled through the Clearing House.

Contracts due on Holidays.

194. All contracts due for settlement on holidays shall be settled on the business day next following.

No Deduction from Purchase Price.

195. A party to a contract receiving securities shall not be entitled to deduct from the purchase price any sum due to or any damages claimed by such party.

Deduction of Dividends.

196. The buyer is entitled when paying for shares on which a dividend, interest, bonus, etc., has been recommended or declared and for which the transfer books of the company were closed before delivery to deduct the dividend, interest, bonus, etc.

declared or recommended, provided that the members of the Association through whom the transaction shall have been effected shall be personally responsible for effecting adjustments finally as between the buyer and the seller when the dividend is actually paid.

Stamp and Transfer Fees.

197. Stamp duties payable to Government and fees charged by a company registering transfers of shares and known as "transfer fees" shall be paid by the buyer.

Settlement in Settlement Room.

198. The buying Member or one of his clerks shall be present in the Settlement Room for the purpose of receiving transfer of shares and making payment for shares and securities; and the selling Member shall not be obliged to deliver the shares and receive payment at the office of the buying Member.

Dividends and Rights.

Buyer Entitled to Rights.

199. (a) The buyer shall be entitled to receive all interest, dividends, bonus, rights and privileges which may appertain to shares bought and for the payment or declaration of which the transfer books shall have closed during the pendency of the contract.

Interest on Debentures.

(b) In all transactions for debentures the seller is entitled to the interest till the date of payment; but if the seller fails to deliver the debentures within seven days from the date of sale interest shall cease.

Dividends and Rights.

200. All transaction in shares shall be ex-dividend from the day on which interest or dividend is payable; they shall be ex-rights from the latest day fixed for the receipt of applications for rights by the company; but all transactions before that day shall be cum-dividend and cum-rights, provided that shares admitted by the Board to dealings for settlements shall be quoted cum-rights to the day fixed by the said Board but thereafter transactions shall be made ex-rights.

Liabilities of Members.

201. Members shall not be personally liable between themselves for interest, dividends, bonus or rights on shares sold by them when such shares were delivered by them not less than four working days before the closing of the books of the company to enable the buyer to get the shares transferred to his name; but nothing in this Rule shall affect the rights and obligations of buyers and sellers between themselves as constituents or principals, for the recovery of such interest, dividends, bonus or rights.

Application for Rights.

202. (a) The buyer is entitled to new shares issued in right of old, provided that he specially claims the same in writing from the seller not later than 1 p.m. on the second day preceding the last day fixed for the receipt of applications by the company.

(b) Notwithstanding the provisions of the above clause, the seller, if he be in possession of the new securities, shall be responsible to the buyer for the same, if claimed

by him before one o'clock on the day following the latest day fixed for the receipt of applications by the Company and should he not be in possession of the new securities, he is bound to render every assistance to the buyer in tracing them.

Letters of Renunciation.

203. Rights are to be settled by letters of renunciation when practicable. When proper letters of renunciation are delivered or tendered to the buyer before 2 p.m. on the day preceding, the latest day fixed for the receipt of applications, the seller shall be relieved of all further liability in respect of all such rights. A Member shall not be bound to accept letters of renunciation not tendered within the time provided in this Rule.

Fresh Transfer on Refusal of Company.

211. When a company objects to a transferee and refuses to register a transfer on the ground of such objection, the transferor shall on request and on the original transfer being presented to him for cancellation of his signature, sign a fresh transfer.

Payment of Calls.

212. (a) The purchaser shall pay every call or contribution which becomes payable after delivery of the certificate and transfer.

Failure of Purchaser to Pay.

(b) If the purchaser fails to make such payment and the seller is compelled to pay the same, the seller shall be entitled to recover the same from the purchaser, notwithstanding that the purchaser applied to the company to transfer the shares and that the Directors of the Company refused the transfer.

Payment of Calls by Selling Member.

213. A selling Member may previous to delivery pay any call made on securities although not due, and may claim the sum paid from buying Member.

Liability of Broker on Calls.

214. No Member shall, subject to the provisions of Rule 213 in respect of any bargain made by such Member on behalf of a principal and as Broker only, be deemed personally liable or responsible in any way to any party for the payment of calls made by a company subsequent to delivery and payment.

Refusal by Company to Transfer on account of Lien.

215. The provisions of Rules 210 and 212 shall not apply where the company refuses to transfer the shares on the ground that the shares are subject to a lien on account of any debt or liability of the transferor ; and if the transfer is refused on that ground the selling Member shall within seven days of his being called upon to do so by the buying Member either release the shares from such lien or give other shares free of lien, and if the selling Member fails to effect such release or to give such shares, the buying Member shall be entitled to rescind the sale and recover the price paid and damages for any loss sustained. In the case of every such share, the buying Member shall be entitled to the benefit of this rule provided he has applied to the Company to have the share transferred within twenty-one days of the date of the delivery of such share.

Company in Liquidation.

216. If a company be wound up at the date of the contract or between the date of the contract and the due date of payment, the seller is entitled to recover from the

purchaser the purchase money and any contribution or call required to be paid even though the Liquidator refuses to consent to the transfer. If the buyer cannot get the shares transferred to his name, the seller shall, if required to do so by the buyer and at the buyer's cost, assign his title to and his rights in the shares sold to the buyer and shall execute a Power of Attorney in favour of the buyer to enable him to recover any dividends becoming payable after the date of contract in respect of the shares bought.

Dispute after Registration.

217. When the official receipt or certificate of registration of securities bought has been issued by the Company concerned, neither the selling Member nor the buying Member shall be personally responsible to the buyer for any subsequent dispute as to the title unless bad faith or fraud is alleged against such Member or unless such Member has dealt on his own account.

Nothing in this rule shall affect the liability of the transferor or actual seller who may have received payment against delivery of securities, in any action at law or in any other proceedings. The provisions of this rule shall apply only to the rights and obligations of Members *inter se*.

Non-Delivery of Letters of Renunciation.

204. If the settlement of claims to rights be not made by letters of renunciation by reason of the failure of the seller to deliver such letters within the time prescribed in Rule 203 the seller shall bear any extra expense of transfer, provided that when no letters of renunciation are issued or recognised by the company, the expenses of transfer shall be borne by the buyer.

Payment of Rights.

205. When letters of renunciation are not issued, all payments as and when required by the company are to be advanced to the seller by the buyer who may demand a receipt for the same and the seller shall be deemed a trustee for the buyer of such payments.

Temporary Settlement.

206. When securities are sold cum-rights and are delivered after the closing of the transfer books for rights and when a new security cannot be obtained by letters of renunciation, the Board shall fix a price which may be deducted by the buyer from the purchase money of the old securities. The buyer shall pay this price, namely, the balance due on the contract when the seller delivers the new securities at any time on or before the day fixed by the Board for the settlement of rights.

Documents and Registration

Regularity and Genuineness of Documents.

207. (a) A Member who receives payment against delivery of all necessary documents either on his own account or on behalf of his constituent shall be personally responsible to the Member to whom the same are delivered for their title, regularity and genuineness provided the documents are lodged with the company for registration within twenty-one days of the date of receipt of such documents by him. If the documents are not lodged within the prescribed period of twenty-one days, then except in the case of fraud or bad faith on the part of the selling Member the liability of the selling Member to both the buying Member and his constituent as also the liability of the buying Member to his constituent shall cease in all respects.

Liability of Constituents.

(b) Nothing in this Rule shall affect the liability of the Constituent (which term shall in cases where a Member has dealt on his account include such Member) from whom the Member may have received the document in any action at law or in any other proceedings. The Member who delivered the document shall however be bound to render every assistance to the buyer in any proceedings he may take against the seller.

Replacement of irregular Documents and Refund.

208. If a Member to whom the documents are delivered gives intimation in writing to the Member who delivered them, of his objection as to their title, regularity or genuineness as soon as it comes to his knowledge, the Member who delivered them shall within a week from the date of such intimation remove any irregularity or establish the title or genuineness of the documents, as the case may be, or deliver other regular, genuine and valid documents, provided that the documents were lodged for registration within twenty-one days from the receipt thereof as provided by Rule 207 (a); but in the event of such Member failing to deliver such other documents, he shall refund on return of the documents the monies paid against such documents.

Refund does not Cancel Contract.

209. (a) A refund of the price on the return of documents shall not operate as cancellation of the contract and if the selling Member within a period of twenty-one days from the refund tenders to the buying Member regular, genuine and valid documents the buying Member shall be bound to accept such documents in fulfilment of the original contract and pay the purchase price;

Buying-in on Non-Tender.

(b) If the selling Member fails to tender such documents within such period the buying Member shall be entitled to buy-in the Securities against him as provided in Rule 183.

Sale not Conditional on Transfer.

210. Save as is provided in Rule 215 a sale of shares is not conditional on the Company transferring the shares into the name of the buyer. The only obligation on the seller on the sale of shares is to tender delivery of the necessary certificates with a properly executed transfer. Such seller shall not be deemed to guarantee that the Company will transfer the shares into the name of the buyer and shall incur no liability by reason of the refusal of the Company in exercise of the power vested in it under the Articles of Association to transfer such shares.

Explanation.—A transfer signed on behalf of the vendor by a person purporting to be his constituted attorney shall not be considered a properly executed transfer if the Power of Attorney in question is conditional and not absolute.

GOVERNMENT SECURITIES, ETC.

Rules specially applicable to bargains in securities of the Government of India, Provincial Governments, debentures and stock of Port Trusts, Municipal Corporations and such other securities as may come within the provisions of the Negotiable Instruments Act, 1881.

BARGAINS GENERALLY.

Bargains.

318. Bargains in securities and stock to which these Rules apply may be for ready delivery or for the settlement.

Bargains for Promissory Notes.

319. All bargains shall be for Promissory Notes transferable by endorsement with interest payable in Bombay unless there is a condition in the contract for delivery of bearer bonds.

Written Contracts to be Exchanged.

320. (a) Written contracts shall be rendered on the day of bargain as provided in Rules 167, 168.

Accrued Interest.

(b) The accrued interest is not included in the bargain price.

Buyer to Pay Interest.

(c) The buyer shall pay interest accrued to the day of payment.

READY DELIVERY BARGAINS.

Delivery and Payment.

321. A bargain for ready delivery shall be for delivery and payment before 3 p.m. on the business day next following the bargains. If such day is Saturday, delivery and payment shall be made on the business day next following :

Provided that if the parties expressly stipulate at the time of the bargain, a bargain for ready delivery shall not be deemed invalid if delivery and payment for the stock is made not later than 7 days from the date of the contract.

Selling-Out.

322. (a) The buying member shall issue a Receive and Pay Order as provided in Rule 332 at or before 12 noon on the day on which delivery and payment is to be made and shall deliver the order to the selling member. If the buying member fails to issue the Receive and Pay Order in the manner prescribed, the selling member shall be entitled to sell-out after giving one business day's notice in accordance with the rules for selling-out.

Buying-in.

(b) If a selling member fails to deliver the scrip before 3 p.m. on the day of issue of the Pay Order, the buyer shall be entitled to buy-in after giving one business day's notice in accordance with the rules for buying-in.

FORWARD BARGAINS.

Forward Listing.

323. (a) The Board shall from time to time at a meeting specially summoned for the purpose determine which of the securities of the Government of India or of the Provincial Governments and which of the debentures or stock of Port Trusts, Municipal Corporations and of the securities within the provisions of the Negotiable Instruments Act shall be admitted to forward dealings and may from time to time in like manner determine which of such securities, debentures or stock shall be removed from the Forward List.

Forward Business in Non-Listed Securities.

(b) No bargains made for the settlement in Government Securities not admitted to forward dealings will be recognised and all such bargains shall be deemed void.

Fortnightly Settlements.

324. (a) The Settlement shall be fortnightly.

Separate Pay Days.

(b) The Board shall in December of each year fix 24 Account Days or Pay Days. Such Pay Days shall be on days other than the Pay Days fixed for the ordinary monthly settlement in other securities.

Deliveries and Payments.

(c) Deliveries and payments for all transactions for forward delivery shall be made on each Account Day or Pay Day fixed by the Board under this Rule.

Certain Forward Bargains Void.

325. All forward bargains for any Account other than the Current Account fixed by the Board under Rule 324 shall be void subject to the provisions of Rule 326.

Beginning of Settlement.

326. The Board shall fix a date from which a bargain for the ensuing account may be made. Such date shall not be earlier than three working days previous to the Ticket Day for the Current Settlement.

Unit of Trade.

327. The unit of trade in all forward bargains shall be Rs. 25,000 face value and all such bargains for a lesser amount are prohibited. The Board may suspend or expel a member who violates this Rule.

Making-up Price.

328. Pay orders shall be issued on Account Day for the purpose of Settlement at the making-up price fixed by the President or the Secretary of the Association. Such price shall be the closing price of the day immediately preceding the Ticket Day.

Differences.

329. Differences due from one member to another shall be paid on the Account Day between such hours as the Board may from time to time prescribe.

Issuing of Tickets.

330. (a) The member who takes up securities bought for the Account, shall issue Tickets each for Rs. 25,000 face value of the securities. Such Tickets must contain a serial number which will be given by the Secretary of the Association on the application of the Member. Such Ticket must also contain the name of the Member issuing the Ticket and the name of the Member from whom he has bought the securities ;

Ticket Day.

(b) The Ticket shall then be passed to the Selling Member a day before the Account Day called the Ticket Day. All Tickets must be passed in the settling room

from seller to seller. Each intermediate seller, in succession, to whom such Tickets shall be passed, shall endorse thereon the name of the seller. The ultimate seller shall retain the Ticket. The passing of Ticket shall commence at 2 p.m. on the Ticket Day, but in no case later than 4 p.m. The said Secretary shall not give numbers of Tickets later than 3 o'clock on the Ticket Day ;

Closing of Bargains.

(c) All outstanding transactions for the Current Settlement shall be closed on the day preceding the Ticket Day.

Pay Order.

331. (a) On the Ticket Day the issuer of Tickets shall hand to the holder of Tickets a Receive-and-Pay Order, drawn only on one of the parties mentioned in Rule 332 (b) in exchange for Tickets. The Holder of Tickets shall deliver the securities at the office of the said Bank or Firm receiving the securities before 3 o'clock on the Account Day, and payment must be made within one hour of the time of the delivery ;

Buying-in.

(b) Failing delivery the Issuer of the Ticket may after giving one business day's notice to the Holder of the Ticket buy-in the securities.

Deliver Order.

332. (a) The Issue of Tickets shall have an option to draw a Receive-and-Pay Order on himself. In such case the Holder of the Tickets shall either deliver to the Issuer of Tickets the securities against payments in cash in the Settling Room or hand over a Deliver Order on one of the approved Banks or Firms before 12 noon on the Account Day. If the Deliver Order is issued by the Holder of Tickets the payment must be made at the office of the said Bank or Firm delivering the securities ;

Place of Payment.

(b) Banks who are Members of the Bankers' Clearing House, Bombay, will not be required to deliver securities at the office of any party except—

- (1) Other Banks who are Members of that Clearing House ;
- (2) Parties approved by the Board and a majority of the Banks who are Members of the Bankers' Clearing House, Bombay ;

Cheques Release Intermediaries.

(c) A party delivering securities sold shall accept a cheque in payment thereof, if tendered during clearing hours, but all intermediate parties shall be released from all liability, if the securities are delivered before the cheque is honoured.

Buying-in without Notice.

333. If the holder of Tickets fails to apply for Receive-and-Pay Order on the Ticket Day, the Issuer of the Ticket shall buy-in the securities the following day without giving notice.

Selling-out.

334. (a) The Member delivering securities sold and who shall not have received the Ticket on the Ticket Day when the circulation has ceased shall sell-out the securities ;

Notice.

(b) Such a Member shall apply to the Secretary of the Association on the Account Day to issue notice for selling-out on the day following. The notice shall be passed on the Account Day to the Member from whom the Ticket is required. All such notices must be passed in the Settling Room from buyer to buyer until they reach the original buyer. Each intermediate buyer is required to endorse on the notice the name of the Member to whom it is passed.

Release of Intermediaries.

335. If buying-in and selling-out be not effected within three business days including the Account Day, all intermediate parties shall be released from all liabilities. The liability of the Issuers and Holders of Tickets is not affected by the fact that intermediaries have been released by lapse of time.

READY DELIVERY OR FORWARD BARGAINS.**Late Buying-in.**

336. The buyer must receive and pay for the securities if tendered before the actual exercise by the buyer of his right to buy-in but he shall not be liable for interest accrued after the day on which the delivery shall have been made.

Late Selling-out.

337. The seller must accept payment if tendered and deliver the securities before the actual exercise by the seller of the right to sell-out but he shall not be entitled to interest at Bank rate for the days between the day on which payment should have been made and the day of actual payment.

Renewal Fees.

338. The buyer is entitled to claim the Renewal Fees when there are less than three blank cages for endorsement on the back of the Note or when there are six or less than six half-yearly interest columns blank or when there are more than two enfacements for payment of interest.

Cross Endorsements.

339. The buyer may refuse to accept the Notes and to pay for them if there is a cross endorsement or if interest is left undrawn for more than one year or if the notes tendered are of lesser denomination than Rs. 500 or if interest payable on or after the pay day is drawn by the seller.

Valid Delivery.

340. The buyer may refuse to pay for securities unless all endorsements on the back of the Note are valid, regular and in proper form, but he shall pay for such portion of the securities as may be in order. The securities thus returned unpaid must not be bought-in until seven days have been allowed to the seller to put the securities in order. The buyer is not liable to pay the accrued interest beyond the due date for the delivery of securities returned. If the seller fails to deliver the securities within the said period of seven days, the buyer shall after giving one business days' notice be entitled to buy-in the same within two days thereafter.

Liability of Broker.

341. The Member acting as a broker on behalf of a constituent is not responsible for the genuineness, regularity and validity of securities passing by endorsement and delivery and delivered by the seller to the buyer.

342. Rules 177 to 180 relating to Payment and Delivery shall not apply to bargains in these securities.

CLEARANCE OF GOVERNMENT SECURITIES.

Settlement Through Clearing House.

343. It shall be competent to the Board to order that, unless provision to the contrary is made in the relevant contracts, all bargains in any specified security shall be cleared or settled by the system of Clearance Sheets instead of by the process of tickets, but delivery and payment shall be made Ex-Clearing House as hereinafter provided unless otherwise ordered by the said Board.

Application of Clearing House Rules.

344. When under the provisions of Rule 343, bargains have to be cleared or settled by the system of Clearance Sheets, the rules relating to the Clearing House shall be a part of the terms and conditions of the relevant contracts.

Issue of Tickets.

345. Deliver and Receive Tickets (Forms X and XI in Appendix J) each for Rs. 25,000 face value of securities, containing serial numbers will be issued by the Secretary of the Association on payment of two annas per Ticket or such other charge as may be prescribed by the Board from time to time. No other forms shall be used. The said Secretary shall not issue Tickets later than 1 p.m. on the Ticket Day without imposing such penalty as may be fixed by the Board.

Lodging of Tickets.

346. Such Tickets shall accompany the Clearance Lists to be lodged at the Clearing House not later than 3 p.m. on the business day (called Ticket Day) preceding the Pay Day.

Deliver and Receive Orders.

347. The Clearing House shall return on the Pay Day the said Tickets to the members who lodged them, with the names filled in at its discretion of the Members to whom deliveries are to be made and of those from whom securities are to be received. The tickets so returned shall be deemed to be Orders for the delivery and receipt of securities.

Such Orders when issued by the Clearing House shall be binding upon and enforceable against members as provided in Rule 303.

Presence at the Clearing House.

348. Members or their representatives shall be present at the office of the Clearing House at 11 a.m. on the Pay Day to receive such Orders for the delivery and receipt of securities and to correct errors, if any, in the Clearing Lists (Form No. 1 in Appendix J).

Exchange of Orders.

349. The receiving member shall hand over to the delivering member as soon as practicable but not later than 12 noon a Receive-and-Pay Order, properly signed by him or his client, in exchange for the delivery order issued by the Clearing House.

Buying-in or Selling-out.

350. The neglect or failure to exchange Orders shall constitute a default and the securities shall be bought-in or sold-out after 1 p.m. on the Pay Day without giving notice to the members in default.

Place of Delivery.

351. (a) The delivery of securities shall be made at the office of the receiver of the securities before 2-30 p.m. on the Pay Day and payment must be made at the making-up price against delivery :

Provided that if such office is not situated in the Fort Area, the delivery shall be made against payment in the Hall of the Association.

(b) Notwithstanding the provisions of sub-rule (a) parties mentioned in rule 332 (b) shall have the right or option of requiring the payment and delivery to be made at their offices, in cases where the receiver of the securities is not one of such parties.

Statement of Purchase Money.

352. If the deliverer wishes to exercise his right or option under rule 351 (b) he must take out a statement, showing the amount due at the making-up price plus the accrued interest and present the same together with the Receive-and-Pay Order at the office of the receiver. Not later than one hour after the receipt thereof, the payment of the amount involved must be made at the office of the said deliverer.

Buying-in.

353. Failing delivery of securities on the Pay Day, the member who is to receive shall, after giving one business day's notice to the member who is to deliver, buy-in the securities in accordance with the rules for buying-in.

Selling-out.

354. If the receiver fails to pay for the securities delivered in the manner provided in these rules, the member who is to deliver shall, after giving one business day's notice to the member who is to receive, sell-out the securities in accordance with the rules for selling-out.

Release of Intermediaries.

355. If securities are not bought-in or sold-out within three business days including the Account Day, all intermediate parties shall be released from all liability. The liability of the Receiving and Delivering members is not affected by the fact that intermediaries have been released by lapse of time.

Payment of Profit and Loss.

356. If the securities are bought-in or sold-out as authorised by these rules, the loss, if any, shall be paid promptly by the member in default to the member buying-in or selling-out : the profit, if any, shall be paid by the member buying-in or selling-out to the member in default :

Provided that if the member in default is or be declared a defaulter or insolvent, the profit or loss, as the case may be shall be dealt with as provided in rule 296.

Short Title and Commencement.

357. (1) These rules may be called the Native Share and Stock Brokers' Association Rules, 1938.

(2) They shall come into force on the 28th day of June 1938.

INTEREST AND RENEWAL FEES ON GOVERNMENT SECURITIES.

The following is the usage relating to calculation of Interest on Government Securities :—

- (1) Interest on Government of India Promissory Notes is calculated on a basis of twelve months in a year, each month being of thirty days.
- (2) Notes delivered on the 31st of any month should be paid for as if delivered on the 30th.
- (3) Notes, therefore, delivered on the first day of January, February, March, April, June, August, September and November should be paid for as if the previous month consisted of thirty days only.

APPENDIX G.

Minimum Scale of Brokerage.

(REFERRED TO IN RULE 167)

Brokerage shall be charged by Members on the purchase or sale of stocks, shares and like securities at not less than the following rates :—

INVESTMENT OF TRUST MONEY.

The following extracts from the Indian Trusts Act, 1882, as amended by the Indian Trusts Amendment Acts of 1908 and 1916 will generally be found sufficient for Trustees holding investments or proposing to invest in Stocks, Shares, Debentures, Mortgage Debentures or Bonds, subject, however, to any special powers or restriction contained in the Trust Deed.

Section 20.—Where the trust-property consists of money and cannot be applied immediately or at an early date to the purposes of the trust, the trustee is bound (subject to any direction in the instrument of trust) to invest the money on the following securities, and on no others :—

- (a) In promissory notes, debentures, stock or other securities of any Local Government or of the Government of India, or of the United Kingdom of Great Britain and Ireland.
- (b) In bonds, debentures and annuities charged by the Imperial Parliament on the revenues of India, provided that after the 15th day of February, 1916, no money shall be invested in any such annuity being a terminable annuity unless a sinking fund has been established in connection with such annuity ; but nothing in this proviso shall apply to investments made before the date aforesaid.
- (bb) In India three-and-half per cent. stock, India three per cent. stock, India two-and-a-half per cent. stock or any other capital stock which may at any time hereafter be issued by the Secretary of State for India in Council under the authority of an Act of Parliament and charged on the revenues of India.
- (c) In stock or debentures, of or shares in, Railway or other companies the interest whereon shall have been guaranteed by the Secretary of State for India in Council or by the Government of India or in debentures of the Bombay Provincial Co-operative Bank Limited, the interest whereon shall have been guaranteed by the Secretary of State for India in Council.
- (d) In debentures or other securities for money issued, under the authority of any Act of a Legislature established in British India, by or on behalf of any municipal body, Port Trust or City Improvement Trust in any Presidency town, or in Rangoon town, or by or on behalf of the Trustees of the Port of Karachi.
- (e) On a first mortgage of immovable property situate in British India :
Provided that the property is not a leasehold for a term of years and that the value of the property exceeds by one-third, or if consisting of buildings, exceeds by one-half the mortgage-money ; or
- (f) On any other security expressly authorised by the instrument of trust or by any rule which the High Court may from time to time prescribe in this behalf.

Provided that, where there is a person competent to contract and entitled in possession to receive the income of the trust-property for his life, or for any greater estate, no investment on any security mentioned or referred to in clauses (d), (e) and (f) shall be made without his consent in writing.

20A. (1) A trustee may invest in any of the securities mentioned or referred to in Section 20, notwithstanding that the same may be redeemable and that the price exceeds the redemption value.

Provided that a trustee may not purchase at a price exceeding its redemption value any security mentioned or referred to in clauses (c) and (d) of Section 20 which is liable to be redeemed within fifteen years of the date of purchase at par or at some other fixed rate, or, purchase any such security as is mentioned or referred to in the said clauses which is liable to be redeemed at par or at some other fixed rate at a price exceeding fifteen per centum above par or such other fixed rate.

(2) A trustee may retain until redemption any redeemable stock, fund or security which may have been purchased in accordance with this section.
